## Allgemeine Eigenschaften und technische Informationen zu den drahtgewickelten SMD-Spulen Baugröße 1812 / Serie 5309, 5509

Mit der Baugröße 1812 erweitert SUMIDA Components sein Spektrum der drahtgewickelten Chipspulen. Diese Größe ermöglicht die Verwendung von dickeren Drähten und bietet somit eine höhere Strombelastbarkeit. Außerdem können mit der 1812 hohe Induktivitätswerte (bis 1mH) erreicht werden.

In der Standardausführung (5309) sind die Anschlüsse mit Ag/Ni/Au metallisiert. Für besondere Anforderungen wie z.B. nicht magnetische Bauteile mit hoher Induktivität, ist die 1812 auf Keramikkörper mit AgPdPt-Metallisierung (5509) bestens geeignet.

## General Characteristics and Technical Information of wire-wound SMD Inductors Size 1812 / Series 5309, 5509

With size 1812 expand SUNDIA Components the spectrum of wire-wound chip coils. This size makes it possible to use thicker wire and thus offer higher ampacity. Furthermore with 1812 can be achieved high inductance values (until 1mH).

The terminations at the standard version (5309) are coated with Ag/Ni/Au. For particular requirements like non-magnetic parts with high inductance value is the size 1812 on ceramic core with metallization AgPdPt (5509) the perfect fitting.
