

Radiation Hardened Inverting 3-to-8 Line Decoder/Demultiplexer

Intersil's Satellite Applications Flow™ (SAF) devices are fully tested and guaranteed to 100kRAD total dose. These QML Class T devices are processed to a standard flow intended to meet the cost and shorter lead-time needs of large volume satellite manufacturers, while maintaining a high level of reliability.

The Intersil HCS138T is a Radiation Hardened 3-to-8 Line Decoder/Demultiplexer. The outputs are active in the low state. Two active low and one active high enables ($\overline{E1}$, $\overline{E2}$, $E3$) are provided. If the device is enabled, the binary inputs ($A0$, $A1$, $A2$) determine which one of the eight normally high outputs will go to a low logic level.

Specifications

Specifications for Rad Hard QML devices are controlled by the Defense Supply Center in Columbus (DSCC). The SMD numbers listed below must be used when ordering.

Detailed Electrical Specifications for the HCS138T are contained in SMD 5962-95727. A "hot-link" is provided from our website for downloading.
