

# Pentium/Pro™ System Clock Chip

## General Description

The ICS9148-47 is part of a reduced pin count two-chip clock solution for designs using an Intel BX style chipset. Companion SDRAM buffers are ICS9179-11 and -12.

There are two PLLs, with the first PLL capable of spread spectrum operation. Spread spectrum typically reduces system EMI by 8-10dB. The second PLL provides support for USB (48MHz) and 24MHz requirements. CPU frequencies up to 100MHz are supported.

The I<sup>2</sup>C interface allows stop clock programming, frequency selection, and spread spectrum operation to be programmed. Clock outputs include two CPU (2.5V or 3.3V), seven PCI (3.3V), one REF (3.3V), one IOAPIC (2.5V or 3.3V), one 48MHz, and one selectable 48/24MHz.

## Features

- Generates system clocks for CPU, PCI, IOAPIC, 14.314 MHz, 48 and 24MHz.
- Supports single or dual processor systems
- Skew from CPU (earlier) to PCI clock 1 to 4ns
- Separate 2.5V and 3.3V supply pins
- 2.5V outputs: CPU, IOAPIC
- 3.3V outputs: PCI, REF
- No power supply sequence requirements
- 28 pin SOIC
- Spread Spectrum operation optional for PLL 1
- CPU frequencies to 100MHz are supported.

## General I<sup>2</sup>C serial interface information

The information in this section assumes familiarity with I<sup>2</sup>C programming. For more information, contact ICS for an I<sup>2</sup>C programming application note.

### How to Write:

- Send the address D2(H) .
- Send two additional dummy bytes, a command code and byte count.
- Send the desired number of data bytes.

See the diagram below:

Note that the acknowledge bit is sent by the clock chip, and pulls the data line low. There is no minimum of data bytes that must be sent.

### How to Read:

- Send the address D3(H).
- Send the byte count in binary coded decimal
- Read back the desired number of data bytes

See the diagram below:

The following specifications should be observed:

1. Operating voltage for I<sup>2</sup>C pins is 3.3V
2. Maximum data transfer rate (SCLK) is 100K bits/sec.

## Absolute Maximum Ratings

Supply Voltage	7.0 V
Logic Inputs	GND-0.5 V to V <sub>DD</sub> +0.5 V
Ambient Operating Temperature	0°C to +70°C
Storage Temperature	-65°C to +150°C

Stresses above those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only and functional operation of the device at these or any other conditions above those listed in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.
