

**4 LINE BIDIRECTIONAL TVSarray™**
**PRODUCT PREVIEW**
**DESCRIPTION**

This 6 pin 4 line bi-directional array is designed for use in applications where protection is required at the board level from voltage transients caused by electrostatic discharge (ESD) as defined by IEC 61000-4-2, electrical fast transients (EFT) per IEC 61000-4-4 and effects of secondary lighting.

These arrays are used to protect 4 discrete lines utilizing pins (1,3,4,6) with a common (pin 5) configuration. The SMS03C thru SMS24C product provides board level protection from static electricity and other induced voltage surges that can damage sensitive circuitry.

These Transient Voltage Suppressor (TVS) diode arrays protect 3.0/3.3 volt components such as DRAM's SRAM's CMOS, HCMOS, HSIC, and low voltage interfaces up to 24 volts. Because of the physical size, weight and protection capabilities, this product is ideal for use in but not limited to miniaturized electronic equipment such as hand held instruments, computers, computer peripherals and cell phones.

**TVS array™ SERIES**

**APPLICATIONS**

- EIA-RS232 data rates 19.6kbs
- EIA-RS422 data rates 10Mbps
- EIA-RS423 data rates 100kbs

**IMPORTANT:** For the most current data, consult MICROSEMI's website: <http://www.microsemi.com>

**FEATURES**

- Protects 3.0/3.3 up through 24 volt components
- Protects 4 bi-directional lines
- Provides electrically isolated protection
- SOT 23-6L Packaging

**PACKAGING**

- Tape & Reel per EIA Standard 481
- 3,000 pieces per 7 inch

**MAXIMUM RATINGS**

- Operating Temperature: -55°C to +150°C
- Storage Temperature: -55°C to +150°C
- Peak Pulse power 200 watts (8/20  $\mu$ s Figure 1)
- SOT 23-6L Packaging

**MECHANICAL**

- Molded SOT23-6L Surface Mount
- Weight .014 grams (approximate)
- Body Marked with device number
- Pin one defined by DOT on top of package

**ELECTRICAL CHARACTERISTICS PER LINE @ 25°C Unless otherwise specified**

\* CLAMPING VOLTAGE @3.6 Amps

Note: Transient Voltage Suppressor (TVS) product is normally selected based on its stand off voltage  $V_{WM}$ . Product selected voltage should be equal to or greater than the continuous peak operating voltage of the circuit to be protected.

### PRODUCT PREVIEW

#### SYMBOLS & DEFINITIONS

| Symbol   | DEFINITION                                                                                                                                                                                                       |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $V_{WM}$ | Rated stand off voltage: Maximum dc voltage that can be applied over the operating temperature range. $V_{WM}$ must be selected to be equal or be greater than the operating voltage of the line to be protected |
| $V_{BR}$ | Minimum Breakdown Voltage: The minimum voltage the device will exhibit at a specified current                                                                                                                    |
| $V_C$    | Clamping Voltage: Maximum clamping voltage across the TVS device when subjected to a given current at a pulse time of 20 $\mu s$ .                                                                               |
| $I_D$    | Standby Current: Leakage current at $V_{WM}$ .                                                                                                                                                                   |
| C        | Capacitance: Capacitance of the TVS as defined @ 0 volts at a frequency of 1 MHz and stated in Pico Farads.                                                                                                      |
