具有可调节延迟和看门狗计时器的 TPS386000 和 TPS386040 四路电源电压监视器

1 特性

- 4 个独立的电压监视器
- 通道 1：
  - 低至 0.4V 的可调节阈值
  - 手动复位 ($\overline{MR}$) 输入
- 通道 2、3：
  - 低至 0.4V 的可调节阈值
- 通道 4:
  - 任何正或负电压的调节阈值
  - 窗口比较器
- 可调节复位延迟时间：1.4ms 至 10s
- 阈值精度：0.25%（典型值）
- 超低静态电流：11µA（典型值）
- 具有专用输出的看门狗计时器
- 可在上电期间很好地控制输出
- TPS386000：漏极开路 $\overline{RESETn}$ 和 $\overline{WDO}$
- TPS386040：推挽 $\overline{RESETn}$ 和 $\overline{WDO}$
- 封装：4mm × 4mm 20 引脚 VQFN

2 应用

- 所有 DSP 和微控制器 应用
- 所有 FPGA 和 ASIC 应用
- 电信和无线基础设施
- 工业设备
- 模拟定序

3 说明

TPS3860x0 系列电源监视器 (SVS) 可以在 0.25%（典型值）的阈值精度下监控 4 个高于 0.4V 的电源轨和 1 个低于 0.4V（包括负电压）的电源轨。当 SENSEm 输入电压下降至编程阈值以下时，4 个监视电路中的每一个 (SVS-n) 都会给出 $\overline{RESETn}$ 或 RESETn 输出信号。您可以使用外部电阻器对各个 SVS-n 的阈值进行编程（其中 *n* = 1、2、3、4，*m* = 1、2、3、4L、4H）。

每个 SVS-n 都具有释放 $\overline{RESETn}$ 或 RESETn 之前的可编程延迟。您可以通过 CTn 引脚连接独立设置各个 SVS 的延迟时间，允许的取值范围为 1.4ms 至 10s。只有 SVS-1 具有低电平有效手动复位 ($\overline{MR}$) 输入；当 $\overline{MR}$ 得到的是逻辑低电平输入时，会给出 $\overline{RESET1}$ 或 RESET1。

SVS-4 使用两个比较器来监控阈值窗口。您可以将额外的比较器配置为第五个 SVS，以通过电压基准输出 VREF 来监控负电压。

TPS3860x0 具有 11µA（典型值）的超低静态电流，且采用了小型 4mm x 4mm VQFN-20 封装。

器件信息(1)

器件型号	封装	封装尺寸（标称值）
TPS3860x0	VQFN (20)	4.00mm × 4.00mm

4 修订历史记录

注：之前版本的页码可能与当前版本有所不同。

Changes from Revision E (October 2015) to Revision F **Page**

- Changed the text in the *Power Supply Recommendations* section from: This power supply should be less than 1.8 V in normal operation to: This power supply should not be less than 1.8 V in normal operation ... 29

Changes from Revision D (September 2013) to Revision E **Page**

- 已添加 *ESD 额定值* 表、*特性* *说明* 部分、*器件功能模式*、*应用和实施* 部分、*电源建议* 部分、*布局* 部分、*器件和文档支持* 部分以及*机械、封装和可订购信息* 部分 ... 1
- 已更改 有关 通道 1、2、3 和 4 的“特性”项目 ... 1
- Changed all references of V_{CC} (and I_{CC}) to V_{DD} (and I_{DD}) throughout the document ... 4
- Changed the description of SENSE4L pin function ... 4
- Changed the description of SENSE4H pin function ... 4
- Changed the description of $\overline{MR}$ pin function ... 4
- Changed the description of WDI pin function ... 4
- Moved ESD ratings from the *Absolute Maximum Ratings* table to the *ESD Ratings* table ... 6
- Deleted the *Dissipation Ratings* table and added the *Thermal Information* table ... 6
- Moved timing and switching parameters (t_W, t_D, t_{WDT}) from the *Electrical Characteristics* table to the respective *Timing Requirements* and *Switching Characteristics* tables ... 8
- Changed the x-axis title notation from *CT* to *CTn* in the *TPS386040 $\overline{RESETn}$ Time-out Period vs CTn* graph ... 14
- Changed the *Watchdog Timer (WDT) Truth Table*; deleted *RESET* condition column heading ... 24
- Changed title of *SENSE INPUT* section to *Undervoltage Detection* ... 25
- Changed Equation 1, Equation 2, and Equation 3 VCC notations to V_{MON} ... 25
- Changed title of *Window Comparator* section to *Undervoltage and Overvoltage Detection* ... 25
- Changed *VCC4* reference in first paragraph of *Undervoltage and Overvoltage Detection* section to $V_{MON(4)}$ ... 25
- Changed Equation 4 and Equation 5 *VCC4* references to $V_{MON(4)}$ ... 25
- Changed the *SVS-4: Window Comparator* image ... 25
- Added VCC to $V_{MON(4)}$ in the *Window Comparator Operation* image ... 26

版权 © 2009–2018, Texas Instruments Incorporated

- Changed title of *Sensing Voltage Less Than 0.4 V* to *Sensing a Negative Voltage* 26
- Changed Equation 6 and Equation 7 references to *VCC4* to $V_{MON(4)}$ 26
- Changed the *SVS4: Negative Voltage Sensing* image 26

Changes from Revision C (August 2011) to Revision D **Page**

- 从数据表中删除了 TPS386020 和 TPS386060 器件 1

Changes from Revision B (March 2011) to Revision C **Page**

- Changed Figure 31 21

Changes from Revision A (January 2010) to Revision B **Page**

- 更改了数据表标题 1
- 更改了 特性 项目 1
- 已更改 应用 要点 1
- 更改了“ 说明 ”文本中第二段的第一句 1
- 在“ 说明 ”文本的最后一段中将低静态电流值从 12µA 更改为 11µA 1
- 更改了首页的典型应用电路图 1
- Added sentence to pin 6 description in Pin Assignments table 4
- Changed last sentence of pin 13 description in Pin Assignments table 4
- Added text to first sentence of first paragraph of *General Description* section. 22
- Changed link in *Window Comparator* section to new Figure 32 25
- Deleted typo in Equation 4 and moved Equation 4 to *Window Comparator* section 25
- Deleted typo in Equation 5 and moved Equation 5 to *Window Comparator* section 25
- Added Figure 32 25
- Changed link in *Sensing Voltage Less Than 0.4V* section to new Figure 34 26
- Added Figure 34 26
- Changed caption for Figure 35 28

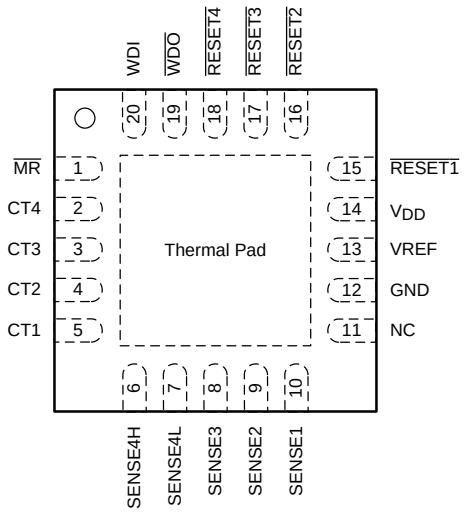
5 Pin Configuration and Functions

RGP Package
20-Pin VQFN
Top View



Pin Functions

PIN		I/O	DESCRIPTION	
NAME	NO.			
V_{DD}	14	I	Supply voltage. TI recommends connecting a 0.1-µF ceramic capacitor close to this pin.	
GND	12	—	Ground	
SENSE1	10	I	Monitor voltage input to SVS-1	When the voltage at this terminal drops below the threshold voltage (V_{ITN}), $\overline{\text{RESET1}}$ is asserted.
SENSE2	9	I	Monitor voltage input to SVS-2	When the voltage at this terminal drops below the threshold voltage (V_{ITN}), $\overline{\text{RESET2}}$ is asserted.
SENSE3	8	I	Monitor voltage input to SVS-3	When the voltage at this terminal drops below the threshold voltage (V_{ITN}), $\overline{\text{RESET3}}$ is asserted.
SENSE4L	7	I	Falling monitor voltage input to SVS-4. When the voltage at this terminal drops below the threshold voltage (V_{ITN}), $\overline{\text{RESET4}}$ is asserted.	
SENSE4H	6	I	Rising monitor voltage input to SVS-4. When the voltage at this terminal exceeds the threshold voltage (V_{ITP}), $\overline{\text{RESET4}}$ is asserted. This pin can also be used to monitor the negative voltage rail in combination with VREF pin. Connect to GND if not being used.	
CT1	5	—	Reset delay programming pin for SVS-1	Connecting this pin to V_{DD} through a 40-kΩ to 200-kΩ resistor, or leaving it open, selects a fixed delay time (see the *Electrical Characteristics*). Connecting a capacitor > 220 pF between this pin and GND selects the programmable delay time (see the *Reset Delay Time* section).
CT2	4	—	Reset delay programming pin for SVS-2	
CT3	3	—	Reset delay programming pin for SVS-3	
CT4	2	—	Reset delay programming pin for SVS-4	
VREF	13	O	Reference voltage output. By connecting a resistor network between this pin and the negative power rail, SENSE4H can monitor the negative power rail. This pin is intended to only source current into resistor(s). Do not connect resistor(s) to a voltage higher than 1.2 V. Do not connect only a capacitor.	
$\overline{\text{MR}}$	1	I	Manual reset input for SVS-1. Logic low level of this pin asserts $\overline{\text{RESET1}}$.	
WDI	20	I	Watchdog timer (WDT) trigger input. Inputting either a positive or negative logic edge every 610 ms (typical) prevents WDT time out at the $\overline{\text{WDO}}$ or WDO pin. Timer starts from releasing event of $\overline{\text{RESET1}}$.	
NC	11	—	Not internal connection. TI recommends connecting this pin to the GND pin (pin 12), which is next to this pin.	
Thermal Pad	PAD	—	This pad is the IC substrate. This pad must be connected only to GND or to the floating thermal pattern on the printed-circuit board (PCB).	

Copyright © 2009–2018, Texas Instruments Incorporated

Pin Functions (continued)

PIN		I/O	DESCRIPTION	
NAME	NO.			
TPS386000				
$\overline{\text{RESET1}}$	15	O	Active low reset output of SVS-1	$\overline{\text{RESETn}}$ is an open-drain output pin. When $\overline{\text{RESETn}}$ is asserted, this pin remains in a low-impedance state. When $\overline{\text{RESETn}}$ is released, this pin goes to a high-impedance state after the delay time programmed by CTn. A pullup resistor to V_{DD} or another voltage source is required.
$\overline{\text{RESET2}}$	16	O	Active low reset output of SVS-2	
$\overline{\text{RESET3}}$	17	O	Active low reset output of SVS-3	
$\overline{\text{RESET4}}$	18	O	Active low reset output of SVS-4	
$\overline{\text{WDO}}$	19	O	Watchdog timer output. This is an open-drain output pin. When WDT times out, this pin goes to a low-impedance state to GND. If there is no WDT time-out, this pin stays in a high-impedance state.	
TPS386040				
$\overline{\text{RESET1}}$	15	O	Active low reset output of SVS-1	$\overline{\text{RESETn}}$ is a push-pull logic buffer output pin. When $\overline{\text{RESETn}}$ is asserted, this pin remains logic low. When $\overline{\text{RESETn}}$ is released, this pin goes to logic high after the delay time programmed by CTn.
$\overline{\text{RESET2}}$	16	O	Active low reset output of SVS-2	
$\overline{\text{RESET3}}$	17	O	Active low reset output of SVS-3	
$\overline{\text{RESET4}}$	18	O	Active low reset output of SVS-4	
$\overline{\text{WDO}}$	19	O	Watchdog timer output. This is a push-pull output pin. When WDT times out, this pin goes to logic low. If there is no WDT time-out, this pin stays in logic high.

6 Specifications

6.1 Absolute Maximum Ratings

Over operating junction temperature range, unless otherwise noted.(1)

		MIN	MAX	UNIT
Voltage	Input, V_{DD}	–0.3	7	V
	CT pin, V_{CT1}, V_{CT2}, V_{CT3}, V_{CT4}	–0.3	V_{DD} + 0.3	
	V_{RESET1}, V_{RESET2}, V_{RESET3}, V_{RESET4}, V_{MR}, V_{SENSE1}, V_{SENSE2}, V_{SENSE3}, $V_{SENSE4L}$, $V_{SENSE4H}$, V_{WDI}, V_{WDO}	–0.3	7	
Current	$\overline{\text{RESETn}}$, RESETn, $\overline{\text{WDO}}$, WDO, VREF pin		5	mA
Power dissipation	Continuous total	See *Thermal Information* table		
Temperature	Operating virtual junction, T_J(2)	–40	150	°C
	Operating ambient, T_A	–40	125	
	Storage, T_{stg}	–65	150	

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) As a result of the low dissipated power in this device, it is assumed that $T_J = T_A$.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

Over operating junction temperature range (unless otherwise noted).

	MIN	NOM	MAX	UNIT
V_{DD}	1.8		6.5	V
V_{SENSE}(1)	0		V_{DD}	V
$WDI_{(HI)}$	$0.7V_{DD}$		V_{DD}	V
$WDI_{(LO)}$	0		$0.3V_{DD}$	V
V_{MR}	0		V_{DD}	V
CTn	0.22		1000	nF
$R_{PULL-UP}$	6.5	100	10000	kΩ
T_J	–40	25	125	°C

(1) All sense inputs.

6.4 Thermal Information

THERMAL METRIC(1)		TPS3860x0 RGP (VQFN) 20 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	46	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	52.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	22.4	°C/W
ψ_{JT}	Junction-to-top characterization parameter	1.3	°C/W
ψ_{JB}	Junction-to-board characterization parameter	22.4	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	4.3	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report (SPRA953).

6.5 Electrical Characteristics

Over the operating temperature range of T_J = –40°C to 125°C, 1.8 V < V_{DD} < 6.5 V, R_{RESETn} (*n* = 1, 2, 3, 4) = 100 kΩ to V_{DD} (TPS386000 only), C_{RESETn} (*n* = 1, 2, 3, 4L, 4H) = 50 pF to GND, R_{WDO} = 100 kΩ to V_{DD}, C_{WDO} = 50 pF to GND, V_{MR} = 100 kΩ to V_{DD}, WDI = GND, and CTn (*n* = 1, 2, 3, 4) = open, unless otherwise noted. Typical values are at T_J = 25°C.

PARAMETER			TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{DD}	Input supply range			1.8		6.5	V
I_{DD}	Supply current (current into V_{DD} pin)		V_{DD} = 3.3 V, $\overline{\text{RESETn}}$ or RESETn not asserted, WDI toggling(1), no output load, and VREF open		11	19	µA
			V_{DD} = 6.5 V, $\overline{\text{RESETn}}$ or RESETn not asserted, WDI toggling(1), no output load, and VREF open		13	22	
	Power-up reset voltage(2)(3)		V_{OL} (max) = 0.2 V, I_{RESETn} = 15 µA			0.9	V
V_{ITN}	Negative-going input threshold voltage		SENSE1, SENSE2, SENSE3, SENSE4L	396	400	404	mV
V_{ITP}	Positive-going input threshold voltage		SENSE4H	396	400	404	mV
V_{HYSN}	Hysteresis (positive-going) on V_{ITN}		SENSE1, SENSE2, SENSE3, SENSE4L		3.5	10	mV
V_{HYSP}	Hysteresis (negative-going) on V_{ITP}		SENSE4H		3.5	10	mV
I_{SENSE}	Input current at SENSEm pin		V_{SENSEm} = 0.42 V	–25	±1	+25	nA
I_{CT}	CTn pin charging current	CT1	C_{CT1} > 220 pF, V_{CT1} = 0.5 V(4)	245	300	355	nA
		CT2, CT3, CT4	C_{CTn} > 220 pF, V_{CTn} = 0.5 V(4)	235	300	365	
$V_{TH(CTn)}$	CTn pin threshold		C_{CTn} > 220 pF	1.18	1.238	1.299	V
V_{IL}	$\overline{\text{MR}}$ and WDI logic low input			0		0.3V_{DD}	V
V_{IH}	$\overline{\text{MR}}$ and WDI logic high input			0.7V_{DD}			V
V_{OL}	Low-level $\overline{\text{RESETn}}$ or RESETn output voltage		I_{OL} = 1 mA			0.4	V
			SENSEn = 0 V, 1.3 V < V_{DD} < 1.8 V, I_{OL} = 0.4 mA(2)			0.3	
	Low-level WDO output voltage		I_{OL} = 1 mA			0.4	
V_{OH}	High-level $\overline{\text{RESETn}}$ or RESETn output voltage	TPS386040 only	I_{OL} = –1 mA	V_{DD} – 0.4			V
	High-level WDO output voltage	TPS386040 only	I_{OL} = –1 mA	V_{DD} – 0.4			V
			SENSEn = 0 V, 1.3 V < V_{DD} < 1.8 V, I_{OL} = –0.4 mA(2)	V_{DD} – 0.3			
I_{LKG}	$\overline{\text{RESETn}}$, RESETn, $\overline{\text{WDO}}$, and WDO leakage current	TPS386000 only	V_{RESETn} = 6.5 V, $\overline{\text{RESETn}}$, RESETn, $\overline{\text{WDO}}$, and WDO are logic high	–300		300	nA
V_{REF}	Reference voltage output		1 µA < I_{VREF} < 0.2 mA (source only, no sink)	1.18	1.2	1.22	V
C_{IN}	Input pin capacitance		CTn: 0 V to V_{DD}, other pins: 0 V to 6.5 V		5		pF

(1) Toggling WDI for a period less than t_{WDT} negatively affects I_{DD}.
(2) These specifications are beyond the recommended V_{DD} range, and only define $\overline{\text{RESETn}}$ or RESETn output performance during V_{DD} ramp up.
(3) The lowest supply voltage (V_{DD}) at which $\overline{\text{RESETn}}$ or RESETn becomes active; $t_{RISE(VDD)}$ ≥ 15 µs/V.
(4) CTn (where *n* = 1, 2, 3, or 4) are constant current charging sources working from a range of 0 V to $V_{TH(CTn)}$, and the device is tested at V_{CTn} = 0.5 V. For I_{CT} performance between 0 V and $V_{TH(CTn)}$, see Figure 28.

6.6 Timing Requirements

Over the operating temperature range of T_J = –40°C to 125°C, 1.8 V < V_{DD} < 6.5 V, R_{RESETn} (*n* = 1, 2, 3, 4) = 100 kΩ to V_{DD} (TPS386000 only), C_{RESETn} (*n* = 1, 2, 3, 4L, 4H) = 50 pF to GND, R_{WDO} = 100 kΩ to V_{DD}, C_{WDO} = 50 pF to GND, V_{MR} = 100 kΩ to V_{DD}, WDI = GND, and CTn (*n* = 1, 2, 3, 4) = open, unless otherwise noted. Nominal values are at T_J = 25°C.

			MIN	TYP	MAX	UNIT
t_W	Input pulse width to SENSEm and $\overline{MR}$ pins	SENSEm: 1.05 V_{ITN} → 0.95 V_{ITN} or 0.95 V_{ITP} → 1.05 V_{ITP}		4		µs
		$\overline{MR}$: 0.7 V_{DD} → 0.3 V_{DD}		1		ns

6.7 Switching Characteristics

Over the operating temperature range of T_J = –40°C to 125°C, 1.8 V < V_{DD} < 6.5 V, R_{RESETn} (*n* = 1, 2, 3, 4) = 100 kΩ to V_{DD} (TPS386000 only), C_{RESETn} (*n* = 1, 2, 3, 4L, 4H) = 50 pF to GND, R_{WDO} = 100 kΩ to V_{DD}, C_{WDO} = 50 pF to GND, V_{MR} = 100 kΩ to V_{DD}, WDI = GND, and CTn (*n* = 1, 2, 3, 4) = open, unless otherwise noted. Typical values are at T_J = 25°C.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_D	$\overline{RESETn}$ or RESETn delay time	CTn = Open	14	20	24	ms
		CTn = V_{DD}	225	300	375	
t_{WDT}	Watchdog timer time-out period(1)		450	600	750	ms

(1) Start from $\overline{RESET1}$ or RESET1 release or last WDI transition.

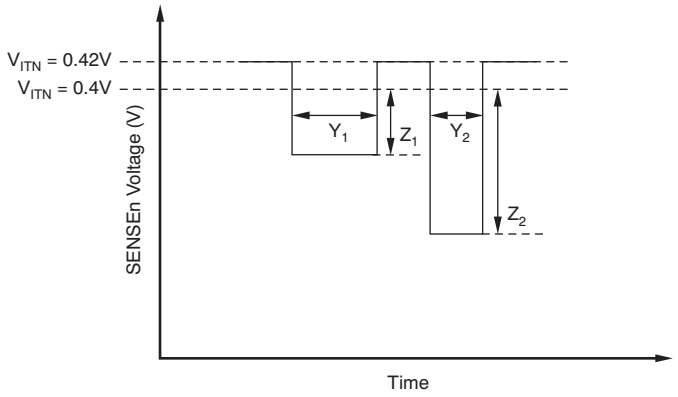
7 Parameter Measurement Information



$$X_1 = \frac{Z_1}{0.4} \times 100\ (\%)$$

$$X_2 = \frac{Z_2}{0.4} \times 100\ (\%)$$

X_1 and X_2 are overdrive (%) values calculated from actual SENSEn voltage amplitudes measured as Z_1 and Z_2.
Y_N is the minimum pulse width that gives RESETn or $\overline{\text{RESETn}}$ transition.
Greater Z_N produces shorter Y_N.

For SENSE4H, this graph should be inverted 180 degrees on the voltage axis.

Figure 29. Overdrive Measurement Method

8 Detailed Description

8.1 Overview

The TPS3860x0 multi-channel supervisory family of devices combines four complete SVS function sets into one IC, along with a watchdog timer, a window comparator, and negative voltage sensing. The design of each SVS channel is based on the single-channel supervisory device series, TPS3808. The TPS3860x0 is designed to assert RESETn or RESETn signals, as shown in Table 1, Table 2, Table 3, and Table 4. The RESETn or RESETn outputs remain asserted during a user-configurable delay time after the event of reset release (see the *Reset Delay Time* section).

The TPS3860x0 has a very low quiescent current of 11 μA (typical) and is available in a small, 4-mm × 4-mm, 20-Pin VQFN package.

8.3 Feature Description

8.3.1 Voltage Monitoring

Each SENSEm (m = 1, 2, 3, 4L) pin can be set to monitor any voltage threshold above 0.4 V using an external resistor divider. The SENSE4H pin can be used for any overvoltage detection greater than 0.4 V, or for negative voltage detection using an external resistor divider (see the *Sensing a Negative Voltage* section). A broad range of voltage threshold and reset delay time adjustments can be supported, allowing these devices to be used in a wide array of applications.

The TPS3860x0 is relatively immune to short negative transients on the SENSEn pin. Sensitivity to transients depends on threshold overdrive, as shown in (Figure 14).

8.3.2 Manual Reset

The manual reset ($\overline{MR}$) input allows external logic signal from other processors, logic circuits, and/or discrete sensors to initiate a device reset. Because $\overline{MR}$ is connected to SVS-1, the $\overline{RESET1}$ or RESET1 pin is intended to be connected to processor(s) as a primary reset source. A logic low at $\overline{MR}$ causes $\overline{RESET1}$ or RESET1 to assert. After $\overline{MR}$ returns to a logic high and SENSE1 is above its reset threshold, $\overline{RESET1}$ or RESET1 is released after the user-configured reset delay time. Unlike the TPS3808 series, the TPS3860x0 does not integrate an internal pullup resistor between $\overline{MR}$ and V_{DD}.

To control the $\overline{MR}$ function from more than one logic signal, the logic signals can be combined by wired-OR into the $\overline{MR}$ pin using multiple NMOS transistors and one pullup resistor.

8.3.3 Watchdog Timer

The TPS3860x0 provides a watchdog timer with a dedicated watchdog error output, $\overline{WDO}$ or WDO. The $\overline{WDO}$ or WDO output enables application board designers to easily detect and resolve the hang-up status of a processor. As with $\overline{MR}$, the watchdog timer function of the device is also tied to SVS-1. Figure 5 shows the timing diagram of the WDT function. Once $\overline{RESET1}$ or RESET1 is released, the internal watchdog timer starts its countdown. Inputting a logic level transition at WDI resets the internal timer count and the timer restarts the countdown. If the TPS3860x0 fails to receive any WDI rising or falling edge within the WDT period, the WDT times out and asserts $\overline{WDO}$ or WDO. After $\overline{WDO}$ or WDO is asserted, the device holds the status with the internal latch circuit. To clear this time-out status, a reset assertion of $\overline{RESET1}$ or RESET is required. That is, a negative pulse to $\overline{MR}$, a SENSE1 voltage less than V_{ITN}, or a V_{DD} power down is required.

To reset the processor by WDT time-out, $\overline{WDO}$ can be combined with $\overline{RESET1}$ by using the wired-OR with the TPS386000 option.

For legacy applications where the watchdog timer time-out causes $\overline{RESET1}$ to assert, connect $\overline{WDO}$ to $\overline{MR}$; see Figure 35 for the connections and see Figure 6 and Figure 7 for the timing diagrams.

Feature Description (continued)

8.3.4 Reset Output

In a typical TPS3860x0 application, $\overline{\text{RESETn}}$ or RESETn outputs are connected to the reset input of a processor (DSP, CPU, FPGA, ASIC, and so forth), or connected to the enable input of a voltage regulator (DC-DC, LDO, and so forth).

The TPS386000 provides open-drain reset outputs. Pullup resistors must be used to hold these lines high when $\overline{\text{RESETn}}$ is not asserted, or when RESETn is asserted. By connecting pullup resistors to the proper voltage rails (up to 6.5 V), $\overline{\text{RESETn}}$ or RESETn output nodes can be connected to the other devices at the correct interface voltage levels. The pullup resistor should be no smaller than 10 kΩ to ensure the safe operation of the output transistors. By using wired-OR logic, any combination of $\overline{\text{RESETn}}$ can be merged into one logic signal.

The TPS386040 provides pushpull reset outputs. The logic high level of the outputs is determined by the V_{DD} voltage. With this configuration, pullup resistors are not required and some board area can be saved. However, all the interface logic levels should be examined. All $\overline{\text{RESETn}}$ or RESETn connections must be compatible with the V_{DD} logic level.

The $\overline{\text{RESETn}}$ or RESETn outputs are defined for V_{DD} voltage higher than 0.9 V. To ensure that the target processor(s) are properly reset, the V_{DD} supply input should be fed by the available power rail as early as possible in application circuits. Table 1, Table 2, Table 3, and Table 4 are truth tables that describe how the outputs are asserted or released. Figure 1, Figure 2, Figure 3, and Figure 4 show the SVS-n timing diagrams. When the conditions are met, the device changes the state of SVS-n from asserted to released after a user-configurable delay time. However, the transitions from released-state to asserted-state are performed almost immediately with minimal propagation delay. Figure 3 describes the relationship between threshold voltages (V_{ITN} and V_{HYSN}) and SENSEm voltage; and all SVS-1, SVS-2, SVS-3, and SVS-4 have the same behavior of Figure 3.

8.4 Device Functional Modes

The following tables show the state of the output and the status of the part under various conditions.

Table 1. SVS-1 Truth Table

CONDITION		OUTPUT	STATUS
$\overline{\text{MR}}$ = Low	SENSE1 < V_{ITN}	$\overline{\text{RESET1}}$ = Low	Reset asserted
$\overline{\text{MR}}$ = Low	SENSE1 > V_{ITN}	$\overline{\text{RESET1}}$ = Low	Reset asserted
$\overline{\text{MR}}$ = High	SENSE1 < V_{ITN}	$\overline{\text{RESET1}}$ = Low	Reset asserted
$\overline{\text{MR}}$ = High	SENSE1 > V_{ITN}	$\overline{\text{RESET1}}$ = High	**Reset released after delay**

Table 2. SVS-2 Truth Table

CONDITION	OUTPUT	STATUS
SENSE2 < V_{ITN}	$\overline{\text{RESET2}}$ = Low	Reset asserted
SENSE2 > V_{ITN}	$\overline{\text{RESET2}}$ = High	**Reset released after delay**

Table 3. SVS-3 Truth Table

CONDITION	OUTPUT	STATUS
SENSE3 < V_{ITN}	$\overline{\text{RESET3}}$ = Low	Reset asserted
SENSE3 > V_{ITN}	$\overline{\text{RESET3}}$ = High	**Reset released after delay**

Copyright © 2009–2018, Texas Instruments Incorporated

Table 4. SVS-4 Truth Table

CONDITION		OUTPUT	STATUS
SENSE4L < V_{ITN}	SENSE4H > V_{ITP}	$\overline{RESET4}$ = Low	Reset asserted
SENSE4L < V_{ITN}	SENSE4H < V_{ITP}	$\overline{RESET4}$ = Low	Reset asserted
SENSE4L > V_{ITN}	SENSE4H > V_{ITP}	$\overline{RESET4}$ = Low	Reset asserted
SENSE4L > V_{ITN}	SENSE4H < V_{ITP}	$\overline{RESET4}$ = High	**Reset released after delay**

Table 5. Watchdog Timer (WDT) Truth Table

CONDITION				OUTPUT	STATUS
$\overline{WDO}$	WDO	$\overline{RESET1}$	WDI PULSE INPUT		
Low	High	Asserted	Toggling	$\overline{WDO}$ = low	Remains in WDT time-out
Low	High	Asserted	610 ms after last WDI↑ or WDI↓	$\overline{WDO}$ = low	Remains in WDT time-out
Low	High	Released	Toggling	$\overline{WDO}$ = low	Remains in WDT time-out
Low	High	Released	610 ms after last WDI↑ or WDI↓	$\overline{WDO}$ = low	Remains in WDT time-out
High	Low	Asserted	Toggling	$\overline{WDO}$ = high	Normal operation
High	Low	Asserted	610 ms after last WDI↑ or WDI↓	$\overline{WDO}$ = high	Normal operation
High	Low	Released	Toggling	$\overline{WDO}$ = high	Normal operation
High	Low	Released	610 ms after last WDI↑ or WDI↓	$\overline{WDO}$ = low	Enters WDT timeout

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

9.1.1 Undervoltage Detection

The SENSEm inputs are pins that allow any system voltages to be monitored. If the voltage at the SENSE1, SENSE2, SENSE3, or SENSE4L pins drops below V_{ITN}, then the corresponding reset outputs are asserted. If the voltage at the SENSE4H pin exceeds V_{ITP}, then $\overline{\text{RESET4}}$ or RESET4 is asserted. The comparators have a built-in hysteresis to ensure smooth reset output assertions and deassertions. In noisy applications, it is good analog design practice to place a 1-nF to 10-nF bypass capacitor at the SENSEm input to reduce sensitivity to transients, layout parasitics, and interference between power rails monitored by this device. A typical connection of resistor dividers are shown in Figure 35. All the SENSEm pins can be used to monitor voltage rails down to 0.4 V. Threshold voltages can be calculated using Equation 1 to Equation 3.

$$V_{MON(1)} = (1 + R_{S1H}/R_{S1L}) \times 0.4\ (V) \quad (1)$$

$$V_{MON(2)} = (1 + R_{S2H}/R_{S2L}) \times 0.4\ (V) \quad (2)$$

$$V_{MON(3)} = (1 + R_{S3H}/R_{S3L}) \times 0.4\ (V) \quad (3)$$

9.1.2 Undervoltage and Overvoltage Detection

The comparator at the SENSE4H pin has the opposite comparison polarity to the other SENSEm pins. In the configuration shown in Figure 32, this comparator monitors overvoltage of the $V_{MON(4)}$ node; combined with the comparator at SENSE4L, SVS-4 forms a window comparator.

$$V_{MON(4,\ UV)} = \{1 + R_{S4H}/(R_{S4M} + R_{S4L})\} \times 0.4\ (V) \quad (4)$$

$$V_{MON(4,\ OV)} = \{1 + (R_{S4H} + R_{S4M})/R_{S4L}\} \times 0.4\ (V)$$

where

- $V_{MON(4,\ UV)}$ is the undervoltage threshold.
- $V_{MON(4,\ OV)}$ is the overvoltage threshold. (5)

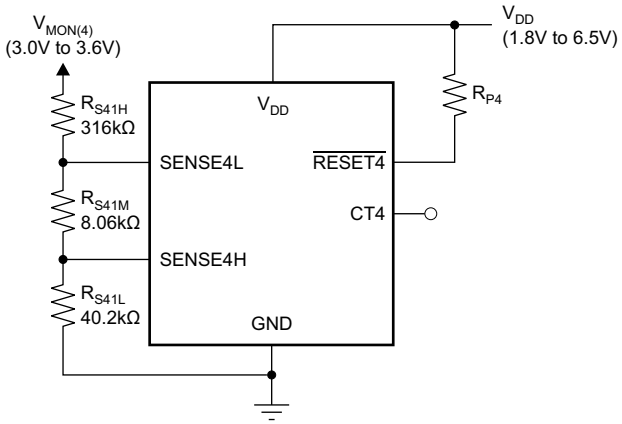

Figure 32. SVS-4: Window Comparator

Application Information (continued)

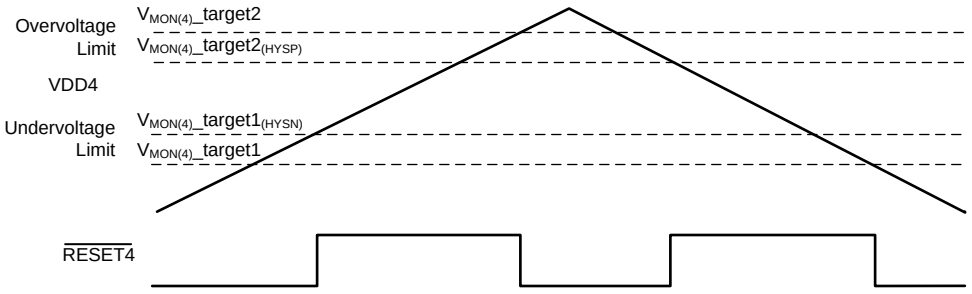

Figure 33. Window Comparator Operation

9.1.3 Sensing a Negative Voltage

By using voltage reference output VREF, the SVS-4 comparator can monitor negative voltage or positive voltage lower than 0.4V. Figure 34 shows this usage in an application circuit. SVS-4 monitors the positive and negative voltage power rail (for example, 15-V and –15-V supply to an op amp) and the $\overline{\text{RESET4}}$ or RESET4 output status continues to be as described in Table 4. R_{S42H} is located at higher voltage position than R_{S42L}. The threshold voltage calculations are shown in Equation 6 and Equation 7.

$$V_{MON(4,\ NEG)} = (1+R_{S41H}/R_{S41L}) \times 0.4\ (V) \quad (6)$$

$$V_{MON(4,\ POS)} = (1+R_{S42L}/R_{S42H}) \times 0.4 - R_{S42L}/R_{S42H} \times V_{REF} = 0.4 - [R_{S42L}/R_{S42H} \times 0.8\ (V)] \quad (7)$$

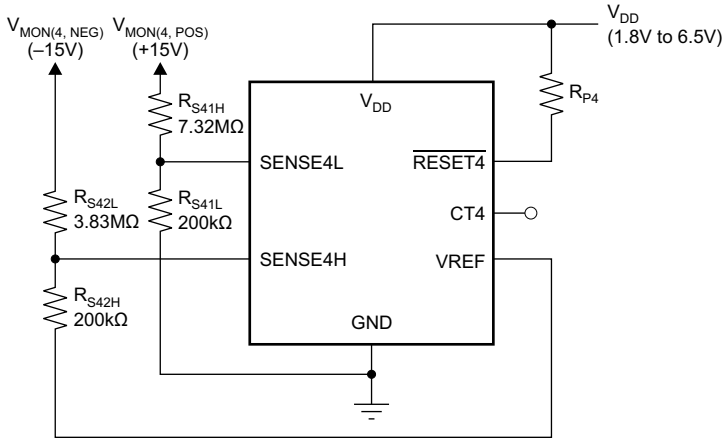

Figure 34. SVS4: Negative Voltage Sensing

Application Information (continued)

9.1.4 Reset Delay Time

Each of the SVS-n channels can be configured independently in one of three modes. Table 6 describes the delay time settings.

Table 6. Delay Timing Selection

CTn CONNECTION	DELAY TIME
Pullup to V_{DD}	300 ms (typical)
Open	20 ms (typical)
Capacitor to GND	Programmable

To select the 300-ms fixed delay time, the CTn pin should be pulled up to V_{DD} using a resistor from 40 kΩ to 200 kΩ. There is a pulldown transistor from CTn to GND that turns on every time the device powers on to determine and confirm CTn pin status; therefore, a direct connection of CTn to V_{DD} causes a large current flow. To select the 20-ms fixed delay time, the CTn pin should be left open. To program a user-defined adjustable delay time, an external capacitor must be connected between CTn and GND. The adjustable delay time can be calculated by the following equation:

$$C_{CT}\ (nF) = [t_{DELAY}\ (ms) – 0.5\ (ms)] \times 0.242 \quad (8)$$

Using this equation, a delay time can be set to between 1.4 ms to 10 s. The external capacitor should be greater than 220 pF (nominal) so that the TPS3860x0 can distinguish it from an open CT pin. The reset delay time is determined by the time it takes an on-chip, precision 300-nA current source to charge the external capacitor to 1.24 V. When the $\overline{\text{RESET}}$n or $\overline{\text{RESET}}$n outputs are asserted, the corresponding capacitors are discharged. When the condition to release $\overline{\text{RESET}}$n or RESETn occurs, the internal current sources are enabled and begin to charge the external capacitors. When the CTn voltage on a capacitor reaches 1.24 V, the corresponding $\overline{\text{RESET}}$n or RESETn pins are released. A low leakage type capacitor (such as ceramic) should be used, and that stray capacitance around this pin may cause errors in the reset delay time.

9.2 Typical Application

Figure 35 shows a typical application circuit.

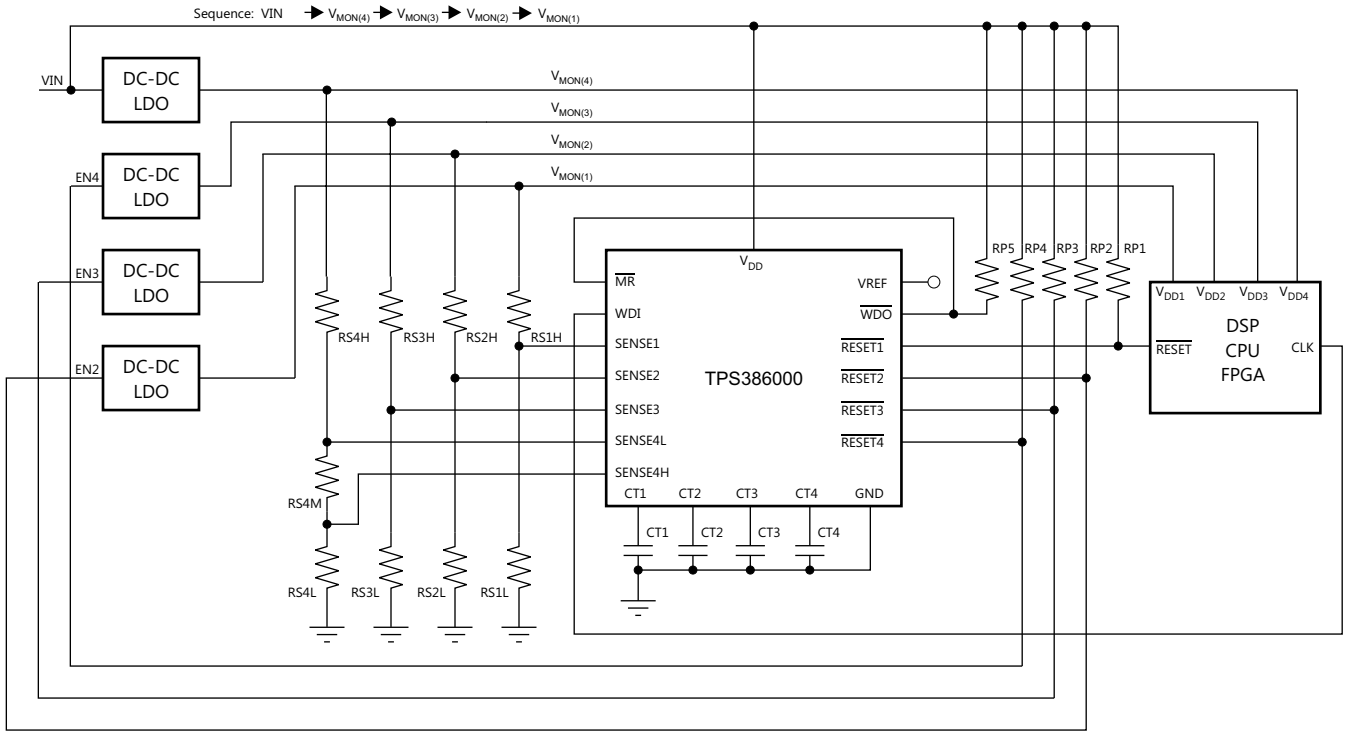

Figure 35. Typical Application Circuit

9.2.1 Design Requirements

This design is intended to monitor the voltage rails for an FPGA. Table 7 summarizes the design requirements.

Table 7. Design Requirements

PARAMETER	DESIGN REQUIREMENT
V_{DD}	5 V
$V_{MON(1)}$	1.8 V –5%
$V_{MON(2)}$	1.5 V –5%
$V_{MON(3)}$	1.2 V –5%
$V_{MON(4)}$	1 V ±5%
Approximate start-up time	100 ms

Copyright © 2009–2018, Texas Instruments Incorporated

9.2.2 Detailed Design Procedure

Select the pullup resistors to be 100 kΩ to ensure that V_{OL} ≤ 0.4 V.

Use Equation 8 to set CT = 22 nF for all channels to obtain an approximate start-up delay of 100 ms.

Select RSnL = 10 kΩ for all channels to ensure DC accuracy.

Use Equation 1 through Equation 5 to determine the values of RSnH and RS4M. Using standard 1% resistors, Table 8 shows the results.

Table 8. Design Results

RESISTOR	VALUE (kΩ)
RS1H	32.4
RS2H	25.5
RS3H	18.7
RS4H	14.3
RS4M	1

The FPGA does not have a separate watchdog failure input, so a legacy connection is used by connecting $\overline{WDO}$ to $\overline{MR}$.

9.2.3 Application Curves

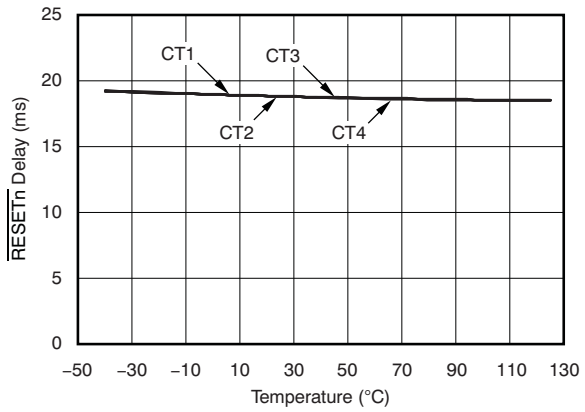

Figure 36. TPS386040 (CTn = Open) $\overline{RESETn}$ Time-Out Period vs Temperature

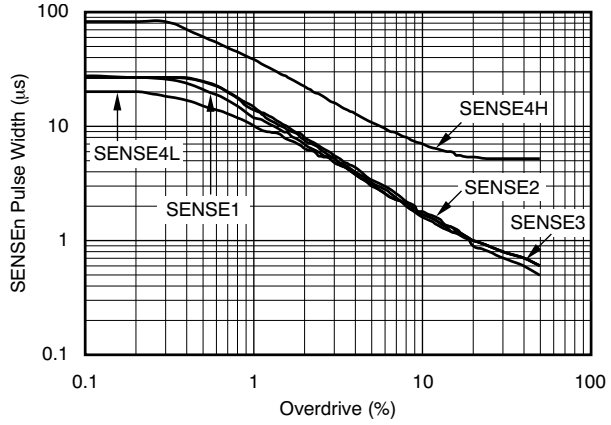

See Figure 29 for measurement technique

Figure 37. TPS386040 SENSEn Minimum Pulse Width vs SENSEn Threshold Overdrive Voltage

10 Power Supply Recommendations

The TPS386000 can operate from a 1.8-V to a 6.5-V input supply. TI recommends placing a 0.1-µF capacitor placed next to the V_{DD} pin to the GND node. This power supply should not be less than 1.8 V in normal operation to ensure that the internal UVLO circuit does not assert reset.

11 Layout

11.1 Layout Guidelines

Follow these guidelines to lay out the printed-circuit board (PCB) that is used for the TPS3860x family of devices.

- Keep the traces to the timer capacitors as short as possible to optimize accuracy.
- Avoid long traces from the SENSE pin to the resistor divider. Instead, run the long traces from the RSnH to $V_{MON(n)}$.
- Place the V_{DD} decoupling capacitor (C_{VDD}) close to the device.
- Avoid using long traces for the V_{DD} supply node. The V_{DD} capacitor (C_{VDD}), along with parasitic inductance from the supply to the capacitor, can form an LC tank and create ringing with peak voltages above the maximum V_{DD} voltage.

TPS386040RGPT	ACTIVE	QFN	RGP	20	250	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 125	TPS 386040	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No–Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

Refer to Application Note, Quad Flat–Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <http://www.ti.com>.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
F. Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

重要声明和免责声明

TI“按原样”提供技术和可靠性数据（包括数据表）、设计资源（包括参考设计）、应用或其他设计建议、网络工具、安全信息和其他资源，不保证没有瑕疵且不做出任何明示或暗示的担保，包括但不限于对适销性、某特定用途方面的适用性或不侵犯任何第三方知识产权的暗示担保。

这些资源可供使用 TI 产品进行设计的熟练开发人员使用。您将自行承担以下全部责任：(1) 针对您的应用选择合适的 TI 产品，(2) 设计、验证并测试您的应用，(3) 确保您的应用满足相应标准以及任何其他功能安全、信息安全、监管或其他要求。

这些资源如有变更，恕不另行通知。TI 授权您仅可将这些资源用于研发本资源所述的 TI 产品的应用。严禁对这些资源进行其他复制或展示。您无权使用任何其他 TI 知识产权或任何第三方知识产权。您应全额赔偿因在这些资源的使用中对 TI 及其代表造成的任何索赔、损害、成本、损失和债务，TI 对此概不负责。

TI 提供的产品受 TI 的销售条款或 ti.com 上其他适用条款/TI 产品随附的其他适用条款的约束。TI 提供这些资源并不会扩展或以其他方式更改 TI 针对 TI 产品发布的适用的担保或担保免责声明。

TI 反对并拒绝您可能提出的任何其他或不同的条款。
