**NOTES**

- The dust cover should not be removed since doing so may alter the characteristics.
- Avoid use under severe environmental conditions, such as high humidity, organic gas or in dust, oily locations and locations subjected to extremely frequent shock or vibrations.
- When mounting, use spring washers. Optimum fastening torque ranges from 49 to 68.6 N·m (5 to 7 kgf·cm).

- Firmly insert the receptacles so that there is no slack or looseness. To remove a receptacle, 19.6 to 39.2 N (2 to 4 kg) of pulling strength is required. Do not remove more than one receptacle at one time. Always remove one receptacle at a time and pull it straight outwards.
- When using the AC type, the operate time due to the in-rush phase is 20 ms or more. Therefore, it is necessary for you to verify the characteristics for your actual circuit.

- When using the push-on blocks for the screw terminal type, use crimped terminals and tighten the screw-down terminals to the torque below.  
M4.5 screw:  
147 to 166.6 N·cm (15 to 17 kgf·cm)  
M4 screw:  
117.6 to 137 N·cm (12 to 14 kgf·cm)  
M3.5 screw:  
78.4 to 98 N·cm (8 to 10 kgf·cm)
