IC19 Data Handbook

7-bit Futurebus+ transceiver

FB2041

DESCRIPTION

The FB2041 is a 7-bit bidirectional BTL transceiver and is intended to provide the electrical interface to a high performance wired-OR bus. The FB2041 is an inverting transceiver.

The B-port drivers are Low-capacitance open collectors with controlled ramp and are designed to sink 100mA. Precision band gap references on the B-port insure very good noise margins by limiting the switching threshold to a narrow region centered at 1.55V.

FEATURES

- 7-bit BTL transceiver
- Separate I/O on TTL A-port
- Inverting
- Three separate pairs of driver enables in a 1 bit, 3 bit, 3 bit arrangement
- Drives heavily loaded backplanes with equivalent load impedances down to 10Ω.
- High drive 100mA BTL open collector drivers on B-port
- Allows incident wave switching in heavily loaded backplane buses
- Reduced BTL voltage swing produces less noise and reduces power consumption
- Built-in precision band-gap reference provides accurate receiver thresholds and improved noise immunity
- Compatible with IEEE Futurebus+ or proprietary BTL backplanes
- Controlled output ramp and multiple GND pins minimize ground bounce
- Each BTL driver has a dedicated Bus GND for a signal return
- Glitch-free power up/power down operation
- Low I_{CC} current
- Tight output skew
- Supports live insertion
- Pins for the optional JTAG boundary scan function are provided
- High density packaging in plastic Quad Flatpack

QUICK REFERENCE DATA

SYMBOL	PARAMETER		TYPICAL	UNIT
t_{PLH}	Propagation delay		3.7	ns
t_{PHL}	AIn to $\overline{Bn}$		2.7	
t_{PLH}	Propagation delay		3.4	ns
t_{PHL}	$\overline{Bn}$ to AOn		3.2	
C_{OB}	Output capacitance ($\overline{B0}$ - $\overline{B6}$ only)		6	pF
I_{OL}	Output current ($\overline{B0}$ - $\overline{B6}$ only)		100	mA
I_{CC}	Supply Current	Standby	19	mA
		AIn to $\overline{Bn}$ (outputs Low or High)	40	
		$\overline{Bn}$ to AOn (outputs Low)	22	
		$\overline{Bn}$ to AOn (outputs High)	19	

ORDERING INFORMATION

PACKAGE	COMMERCIAL RANGE $V_{CC} = 5V \pm 10\%$; $T_{amb} = 0$ to $+70^{\circ}C$	INDUSTRIAL RANGE $V_{CC} = 5V \pm 10\%$; $T_{amb} = -40$ to $+85^{\circ}C$	DWG No.

7-bit Futurebus+ transceiver

FB2041

PIN CONFIGURATION

The B-port interfaces to "Backplane Transceiver Logic" (See the IEEE 1194.1 BTL standard). BTL features low power consumption by reducing voltage swing (1Vp-p, between 1V and 2V) and reduced capacitive loading by placing an internal series diode on the drivers. BTL also provides incident wave switching, a necessity for high performance backplanes.

There are three separate pairs of driver enables in a 1 bit, 3 bit, 3 bit arrangement. The TTL/BTL output drivers for bit 0 are enabled with OEA₁/OEB₁, output drivers for bits 1–2–3 are enabled with OEA₂/OEB₂ and output drivers for bits 4–5–6 are enabled with OEA₃/OEB₃.

The A-port operates at TTL levels with separate I/O. The 3-state A-port drivers are enabled when OEAn goes High after an extra 6ns delay which is built in to provide a break-before-make function. When OEAn goes Low, A-port drivers become High impedance without any extra delay. During power on/off cycles, the A-port drivers are held in a High impedance state when V_{CC} is below 2.5V.

The B-port has an output enable, OEB₀, which affects all seven drivers. When OEB₀ is High and $\overline{\text{OEB}}_n$ is Low the output driver will be enabled. When OEB₀ is Low or if $\overline{\text{OEB}}_n$ is High, the B-port drivers will be inactive and at the level of the backplane signal.

To support live insertion, OEB₀ is held Low during power on/off cycles to insure glitch free B port drivers. Proper bias for B port drivers during live insertion is provided by the BIAS V pin when at a 5V level while V_{CC} is Low. If live insertion is not a requirement, the BIAS V pin should be tied to a V_{CC} pin.

The LOGIC GND and BUS GND pins are isolated in the package to minimize noise coupling between the BTL and TTL sides. These pins should be tied to a common ground external to the package.

Each BTL driver has an associated BUS GND pin that acts as a signal return path and these BUS GND pins are internally isolated from each other. In the event of a ground return fault, a "hard" signal failure occurs instead of a pattern dependent error that may be very infrequent and impossible to trouble-shoot.

The LOGIC V_{CC} and BUS V_{CC} pins are also isolated internally to minimize noise and may be externally decoupled separately or simply tied together.

JTAG boundary scan functionality is provided as an option with signals TMS, TCK, TDI and TDO. When this option is not present, TMS and TCK are no-connects (no bond wires) and TDI and TDO are shorted together internally.

7-bit Futurebus+ transceiver

FB2041

PIN DESCRIPTION

SYMBOL	PIN NUMBER	TYPE	NAME AND FUNCTION
AI0 – AI6	51, 2, 3, 8, 9, 14, 18	Input	Data inputs (TTL)
AO0 – AO6	50, 52, 4, 6, 10, 12, 16	Output	3-state outputs (TTL)
$\overline{B0} - \overline{B6}$	40, 38, 36, 34, 32, 30, 28	I/O	Data inputs/Open Collector outputs, High current drive (BTL)
OEB0	46	Input	Enables the Bn outputs when High
$\overline{OEB1}$	45	Input	Enables the B0 output when Low
$\overline{OEB2}$	25	Input	Enables the B1 – B3 outputs when Low
$\overline{OEB3}$	26	Input	Enables the B4 – B6 outputs when Low
OEA1	47	Input	Enables the A0 outputs when High
OEA2	20	Input	Enables the A1 – A3 outputs when High
OEA3	24	Input	Enables the A4 – A6 outputs when High
BUS GND	41, 39, 37, 35, 33, 31, 29, 27	GND	Bus ground (0V)
LOGIC GND	1, 5, 7, 11, 13, 15, 19	GND	Logic ground (0V)
BUS V _{CC}	23, 43	Power	Positive supply voltage
LOGIC V _{CC}	17, 49	Power	Positive supply voltage
BIAS V	48	Power	Positive supply voltage
TMS	42	Input	Test Mode Select (no-connect)
TCK	44	Input	Test Clock (no-connect)
TDI	22	Input	Test Data In (shorted to TDO)
TDO	21	Output	Test Data Out (TDI)

ABSOLUTE MAXIMUM RATINGS

Operation beyond the limits set forth in this table may impair the useful life of the device. Unless otherwise noted these limits are over the operating free-air temperature range.

SYMBOL	PARAMETER		RATING	UNIT
V _{CC}	Supply voltage		-0.5 to +7.0	V
V _{IN}	Input voltage	AI0 – AI6, OEB0, $\overline{OEBn}$, OEAn	-1.2 to +7.0	V
		$\overline{B0} - \overline{B6}$	-1.2 to +5.5	
I _{IN}	Input current		-18 to +5.0	mA
V _{OUT}	Voltage applied to output in High output state		-0.5 to +V _{CC}	V
I _{OUT}	Current applied to output in Low output state	AO0 – AO6	48	mA
		$\overline{B0} - \overline{B6}$	200	
T _{STG}	Storage temperature		-65 to +150	°C

RECOMMENDED OPERATING CONDITIONS

NOTES:

H = High voltage level

L = Low voltage level

X = Don't care

Z = High-impedance (OFF) state

— = Input not externally driven

H** = Goes to level of pull-up voltage

B* = Precaution should be taken to ensure B inputs do not float.
If they do, they are equal to Low state.

Z = High-impedance (OFF) state

— = Input not externally driven

H** = Goes to level of pull-up voltage

B* = Precaution should be taken to ensure B inputs do not float.
If they do, they are equal to Low state.

SYMBOL	PARAMETER	TEST CONDITION	R _U = 16.5Ω			R _U = 16.5Ω		UNIT
t _{PLH} t _{PHL}	Propagation delay, AIn to Bn	Waveform 1, 2	2.5 1.6	3.8 2.8	5.0 4.5	2.0 1.6	6.0 5.1	ns
t _{PLH} t _{PHL}	Enable/disable time, OEB0 to Bn	Waveform 2	2.5 2.0	3.8 3.6	5.0 5.0	2.0 1.9	6.5 6.0	ns
t _{PLH} t _{PHL}	Enable/disable time, OEB1 to Bn	Waveform 1	2.5 2.0	4.1 3.7	5.5 5.5	2.0 1.6	6.9 6.9	ns
t _{TLH} t _{THL}	Transition time, Bn Port (1.3V to 1.8V)	Test Circuit and Waveforms	1.0 0.5	1.5 1.1	3.0 3.0	1.0 0.5	3.0 3.0	ns
t _{SK} (o)	Output skew between drivers in same package ¹	Waveform 3		0.3	1.0		1.0	ns

NOTES:

- $|t_{PNactual} - t_{PMactual}|$ for any data input to output path compared to any other data input to output path where N and M are either LH or HL. Skew times are valid only under same test conditions (temperature, V_{CC} , loading, etc.).

Data sheet status

Data sheet status	Product status	Definition [1]
Objective specification	Development	This data sheet contains the design target or goal specifications for product development. Specification may change in any manner without notice.
Preliminary specification	Qualification	This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.
Product specification	Production	This data sheet contains final specifications. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.

[1] Please consult the most recently issued datasheet before initiating or completing a design.

Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Disclaimers

Life support — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
