

EHP-B05 series

Introduction

B05 series is a high power, multi-chip device with very low thermal resistance as a result of the PCB substrate. The series is a surface-mount high-power device featuring high brightness that is suitable for all kinds of lighting applications such as general illumination, spot, signal, industrial and commercial lighting.

Features

- ◆ Robust package with high lumens
- ◆ ESD protection up to 8KV
- ◆ Soldering method: SMT
- ◆ Moisture Sensitivity Level: 3
- ◆ RoHS compliant
- ◆ ANSI binning
- ◆ Reliability testing conforms to IESNA LM80 Lumen maintenance test method

Applications

- ◆ General Lighting
- ◆ Spot Lighting
- ◆ Signal and Symbol Luminaries for orientation marker lights (e.g. steps, exit ways, etc.)
- ◆ Industrial Lighting
- ◆ Commercial Lighting

Product Nomenclature

The product name is designated as below:

EHP-B05MLG/GT04H-P05/50K/R11/TR

Designation:

EHP-B05=Family name

MLG = Lambertian

GT =Color Code [1]

0 _ H = Quantity of the chip [2]

P05 =Power Consumption[3]

50K = Color bin or CCT bin

R11 = min. luminous flux (lm) or radiation power (mW) performance

TR = Tape and Reel

Notes

1. Code of wavelength of the chip:

Symbol	Color	Dominant wavelength range/Peak wavelength/CCT
RB	Royal Blue	445~460nm
UB	Ultra Blue	460~470nm
SUG	Green	520~540nm
UY	Amber	580~595nm
USO	Ultra Red-Orange	610~620nm
SUR	Super ultra-Red	620~635nm
GRB	RGB full color	SUR+SUG+UB
GT	White, CRI Min 70	4745-7050K
LM	Warm White, CRI Min 70	2580-4745K
KT	White, CRI Min 80	4745-7050K
KM	Warm White, CRI Min 80	2580-4745K

2. Quantity of the chip:

Symbol	Description
2	2 chips
4	4 chips
6	6 chips
8	8 chips

3. Consume the power:

Symbol	Description
P05	5W
P07	7W
P10	10W

Materials

Items	Description
Substrate	PCB with Metal Heat Sink
Housing	Heat resistant polymer
Encapsulating Resin	Silicone resin

Maximum Ratings

Parameter	Symbol	Ratings	Unit
DC Forward Current ₍₁₎	I_F	800	mA
DC Pulse Current ₍₂₎	I_{PF}	1000	mA
ESD Sensitivity	ESD	8000	V
Junction Temperature ₍₃₎	T_j	125	°C
Operating Temperature ₍₄₎₍₅₎	$T_{op.}$	-40 ~ +85	°C
Storage Temperature	$T_{stge.}$	-40 ~ +100	°C
Junction To Heat-Sink Thermal Resistance	R_{th}	7	°C/W
Max. Solder Pad Temperature	T_{Sol}	260	°C
Max. Allowable Reflow Cycles	n/a	2	cycles

Notes:

1. Maximum forward current is 1000mA (Thermal Pad = 25°C).
2. Duty cycle = 1/10@1KHz (Thermal Pad = 25°C)
3. Maximum junction temperature is 125°C for White LEDs.
4. Maximum Operating Temperature (Thermal Pad) is 85°C for White LEDs.
5. Avoid operating LEDs at maximum operating temperature exceeding 1 hour.

JEDEC Moisture Sensitivity

Level	Floor Life		Soak Requirements Standard	
	Time (hours)	Conditions	Time (hours)	Conditions
3	168H	30°C / 60% RH	192 (+5/-0)	30°C / 60% RH

PN of the B05 series: Typ. CRI 75 White LEDs

The table below is a list of part numbers for the EHP-B05 5W series White LED. All parts listed match ANSI binning standards. Bin offerings of 2700K to 6500K are listed and currently available. CRI is also listed with min 70 to 80. Typical view angle is 140°. These clearly listed binning options allow for proper design and implementation into lighting applications.

For Example: If you order product using EHP-B05MLG/GT04H-P05/57K/R11/TR, you will get White, EHP-B05 series LEDs at 700mA are listed below.

Color Variant	Radiation Pattern	CRI Typ	CCT	Forward Voltage (V)	Minimum Luminous Flux (lm)
Cool White	Lambertian	75	57K-1 ~ 57K-2 57K-3 ~ 57K-4	6.0~6.5(O4) 6.5~7.0(O5)	400

Note: Currently available brightness bins for White LEDs are highlighted and bolded.

Forward Voltage Bins

Bin	Minimum Forward Voltage (V)	Maximum Forward Voltage (V)
O1	4.5	5.0
O2	5.0	5.5
O3	5.5	6.0
O4	6.0	6.5
O5	6.5	7.0
O6	7.0	7.5
O7	7.5	8.0
R1	8.0	9.0
R2	9.0	10.0
R3	10.0	11.0
R4	11.0	12.0

Notes

1. Wide forward voltage 0.5V bin structure O1 ~ O7
2. Wide forward voltage 1.0V bin structure R1 ~ R4

White Bin Structure

Chromaticity specification defined by ANSI

Notes:

1. The CCT range of Warm-White varies from 2580K to 3710K
2. The CCT range of Neutral-White varies from 3710K to 4745K.
3. The CCT range of Cool-White varies from 4745K to 7050K
4. Color coordinates measurement allowance : ± 0.01
5. Color bins are defined at $I_f=350\text{mA}$ operation.

Reference Range: 3500~3710K		

Note: Currently available typical CCT ranges are 3000K, 5700K, and 6500K CCT

Dimensions

Soldering patterns

Notes.

1. Dimensions are in millimeters.
2. Tolerances for fixed dimensions are ± 0.25 mm.

Wavelength Characteristics

For Cool-White, @ Solder Pad Temperature = 25

For Neutral-White, @ Solder Pad Temperature = 25

For Warm-White, @ Solder Pad Temperature = 25

Typical Light Output Characteristic vs. Solder Pad Temperature

Cool-White, Neutral-White, Warm-White for 700mA Drive Current

Typical Forward Voltage vs. Solder Pad Temperature @ 700mA Drive Current

Typical Electrical Characteristics

For Cool-White, Neutral-White, Warm-White
@ Solder Pad Temperature = 25

Typical Relative Luminous Flux vs. Forward Current

For Cool-White, Neutral-White, Warm-White
@ Solder Pad Temperature = 25

Typical CCT Shift Characteristics vs. Forward Current

For Cool-White @ Solder Pad Temperature = 25

For Warm-White @ Solder Pad Temperature = 25

Current Derating Curves

Current Derating Curve for 700mA Drive Current
Cool-White, Neutral-White, Warm-White

Typical Radiation Pattern

Note.

1. $2\theta_{1/2}$ is the off axis angle from lamp centerline where the luminous intensity is 1/2 of the peak value.
2. View angle tolerance is $\pm 5^\circ$.

EVERLIGHT

Label explanation

- CPN: Customer's Production Number
- P/N : Production Number
- QTY: Packing Quantity
- CAT: Rank of Luminous Flux
- HUE: Color Rank
- REF: Rank of Forward Voltage
- LOT No: Lot Number
- MADE IN TAIWAN: Production Place

Reel Dimensions

Note.

1. Dimensions are in millimeters.
2. Tolerances for fixed dimensions are ±0.1mm.

Carrier Tape Dimensions: Loaded quantity 300 PCS per reel

Note.

1. Dimensions are in millimeters.
2. Tolerances for fixed dimensions are $\pm 0.1\text{mm}$.

Moisture Resistant Packaging

Reliability Data
(EHP-B05 Series-5W)

Stress Test	Stress Condition	Stress Duration

*Im: BRIGHTNESS ATTENUATE DIFFERENCE(1000hrs)<30%

*VF: FORWARD VOLTAGE DIFFERENCE<20%

Precautions For Use

1. Over-current-Protection

Though the EHP-B05 series has an ESD protection mechanism, customer must not use the device in reverse and should apply resistors for extra protection. Otherwise, slight voltage shifts may cause significant current changes and may cause failure.

2. Storage

- i. Do not open the moisture proof bag before the devices are ready to use
- ii. Before the package is opened: The LEDs should be stored at temperatures 30 °C or less and humidity 50% or less.
- iii. LEDs may be stored for 6 months. When the storage time has reached more than 6 months, LEDs should be stored in a sealed container filled with Nitrogen gas.
- iv. After the package is opened: The LEDs should be stored at temperatures under 30 °C or less and humidity 30% or less.
- v. LEDs should be used within 168 hours (7 days) after the package is opened.
- vi. Before using LEDs: The LEDs should be baked under the following conditions: pre-curing at 60±5 °C for 24 hours.

3. Thermal Management

- i. For maintaining high flux output and achieving maximum reliability, EHP-B05 series LEDs should be mounted on a metal core printed circuit board (MCPCB) with proper thermal connection to dissipate approximately 5W of thermal energy under 700mA operation.
- ii. Special thermal designs are also recommended to take into account outer heat sink design, such as FR4 PCB on Aluminum with thermal vias or FPC on Aluminum with thermal conductive adhesive, etc.

MCPCB structure

Recommend:

$$\text{Max } T_{\text{slug}} = 70$$

- iii. Sufficient thermal management must be implemented, or the die junction temperature may exceed the limit and LED lifetime will decrease critically.

4. Proper Handling

To avoid contamination of materials, damage of internal components, and shortening of LED lifetime, do not subject LEDs to conditions as those listed below.

Bare Hand

When handling the product, do not apply direct pressure to the optical surface.

Pick and Place Nozzle for Surface Mount Assembly.

Avoid directly contacting with nozzle.

Tweezers

Do not touch the resin with tweezers to avoid scratching or other damage the optical surface.

During Module Assembly

Do not stack the modules together, it could damage the resin or scratch the lens.

5. Reflow Soldering Process

- a. EHP-B05 series are suitable for SMT process
- b. Curing of glue in oven according to standard operation flow processes.

Profile Feature	Parameter
Ramp-UP Rate	2-3 /S
Preheat Temperature	150-200
Preheat Time(t_s)	60~120s
Liquid Temperature(T_L)	217
Time above T_L	60-90s
Peak Temperature(T_P)	260±5 (Varied with the solder material)
Peak Time(t_p)	Max 20s
Ramp-Down Rate	3-5 /S

- c. Reflow soldering should not be done more than twice.
- d. In soldering process, stress on the LEDs during heating should be avoided.
- e. After soldering, do not warp the circuit board.

Revision History
