

RLT1300-BL

TECHNICAL DATA

Infrared Laser Diode

Features

Lasing Mode Structure: single mode
Peak Wavelength: typ. 1310 nm
Optical Ouput Power: 5 mW

• Package: 5.6 mm, 4-pin, ball lens

Applications

- Optical Fiber Communication
- Free-space Optical Communication

Specifications (25°C)

Characteristics	Symbol	Min.	Тур.	Max.	Unit
Optical Specifications					
CW Output Power	Po	-	5	-	mW
Center Wavelength	λ _C	1290	1310	1330	nm
Spectral Width	Δλ	-	≤ 3.0	-	nm
Emitting area	WxH	-	4 x 1	-	μm
Wavelength Temperature Coefficient		-	0.35	-	nm/°C
Beam Divergence	$\theta \perp \times \theta_{\parallel}$	-	40x20	-	Deg
Polarization	"		TE		
Electrical Specifications					
Threshold Current	I _{th}	-	10	-	mA
Operating Current	l _{op}	-	27	-	mA
Operating Voltage	V _{op}				V
Monitor Current	I _{PD}				mA
Package Style		TO18, 4-pin			
Absolute Maximum Ratings					
Reverse Voltage	U_R				V
Operating Temperature	T _{OP}		+10 +30		°C
Storage Temperature	T _{STG}		-40 +85		°C

Electrical Connection

TO18 Package (Buttom View)

Pin 1: PD Cathode

Pin 2: n.c.

Pin 3: LD Cathode

Pin 4: LD Anode, PD Anode

Notes

- 1. High power laser diodes are high energy laser devices. It is harmful to human body and health. Never look directly into the laser output port.
- 2. High power laser diodes could operate in forward voltage. The reverse current and voltage should not be higher than 25µA and 3V, respectively.
- 3. Heavy humidity can get dew on the LD then damage the LD.
- 4. The generated heat must be removed in time when the LD working.
- 5. The high temperature will effect the performance of the products. The lifetime can also be shortened by high temperature.
- 6. The operating current and optical power of laser must not be higher than the given rate current and power. The excessive current would accelerate aging and shorten lifetime, even damage the LD.
- 7. The semiconductor laser diode is a sensitive electronic device. Please observe precaution for handling electrostatitic sensitive devices.
