

# Compact fans for AC and DC

version 2016-01

**ebm papst**

The engineer's choice

# Trendsetter in fan technology

*Uncompromising quality made by ebm-papst*

## Among the best.

Trendsetting with innovative technologies. Listening to customers' needs. Developing new ideas to meet requirements and realising them with pioneering spirit. This philosophy has made ebm-papst the technological leader in the world of fans.

A brand which has very little real competition because every fan is a product of decades of application expertise gained from large-volume production and because we are in a position to produce highly efficient quality products. Our intelligent solutions for electronics cooling ensure that you are one step ahead of competitors thanks to innovative, reliable top-quality technology which is cost-favourable and in line with market requirements. And if required, tailor-made right down to the last detail. In other words, if you need fans which do not yet actually exist, contact us.

Insist on ebm-papst.

# Table of contents

## Company profile: ebm-papst

*The entire scope of ventilation and drive technology: this is the world of ebm-papst. More than 12.000 people – in Germany and throughout the world – develop, produce and sell our motors and fans. Our global presence and our unique range of products based on a quality standard that surpasses every other have made us what we are: world market leader in motors and fans. Expertly knowing what our customers need and incessantly striving to arrive at the perfect application solution for a wide variety of different industries is what determines our daily work.*

*Those who know us know the high standards we apply to our work and know our creed: to be as close to our customers as possible and to simply be the best in terms of innovation and reliability.*

## Our history – Our drive

Rooted in ebm, PAPST and mvl, the three leading innovators in the development and production of motors and fans, ebm-papst has established itself as the world market leader. Now as ever, our legendary inventive spirit shines through in products that set standards in many segments of industry worldwide. We are proud to say that despite difficult competition, our performance has always been exemplary and outstanding – in business, in our personal relationship with our customers, and of course with respect to technology and engineering. For decades, we have contributed to the world of air technology and drive engineering with small revolutions and large milestones.

To maintain this advantage in skills and knowledge to get maximum quality and thus the highest degree of customer satisfaction, our employees around the world put their passion and dedication to work for you.

## Passionately involved in R&D

Our catalogues just list the results of our incessant efforts in R&D: products of highest quality and reliability. After all, it is our passion to constantly try something new and improve what we have. In doing so, we take advantage of the latest development methods and state-of-the-art technology and invest quite heavily in R&D facilities. Best of all, though, we rely on excellently trained and skilled engineers and technicians to be at your service in R&D and Sales & Distribution.

## Producing and safeguarding high-quality products and services

This is our promise without any compromise. Whether produced in one of our six factories in Germany or one of our eleven international production sites, our products always have the same high level of quality. This quality control is something you can definitely rely on! And this across all levels

of production and throughout all processes: consulting customers, development, material selection through to picking certified, choice suppliers and on to the production of parts and final delivery. On top of this, our products have to pass the most rigorous tests under all realistic operating conditions: continuous stress test, salt spray test, vibration test, or precision noise measuring, just to mention a few. And the product gets clearance for serial production only after all the desired characteristics have been determined to be just right.

Environmental care is another priority with ebm-papst. This is why we have developed our product line in EC technology, which makes for very low power consumption. Due to our manufacturing philosophy, there is absolute focus on environmental care in production, recycling, waste and wastewater disposal.

## Global Domestic

In order to be specialist for customised solutions throughout the world, you need strong partners. Global Domestic – i.e. being present all over the world and being a national company in each individual country – is how we have established ourselves in all important markets on this globe with our successful subsidiaries. And so you will always find ebm-papst close to home, speaking your language, and knowing the demands of your markets. Besides, our worldwide production alliance serves as a basis for competitive pricing. Our global services and logistic outlets, i.e. IT networking, safeguard short reaction times and just-in-time delivery.

All our efforts are documented in a comprehensive quality management system, both for products and services. Being certified as complying with the tough requirements of the international standards DIN EN ISO 9001, ISO/TS 16949-2 and of standard DIN EN ISO 14001 is just one seal of approval we have received for our unceasing efforts to provide only the best quality products and services.

# Sustainability is at the centre of our thoughts and actions. Out of conviction!

*Eco-friendliness and sustainability have always been at the core of our thoughts and actions. For decades, we have worked according to the simple but strict creed of our co-founder Gerhard Sturm: "Each new product we develop has to be better than the last one in terms of economy and ecology." GreenTech is the ultimate expression of our corporate philosophy.*

## **GreenTech is pro-active development.**

Even in the design phase, the materials and processes we use are optimised for the greatest possible eco-friendliness, energy balance and – wherever possible – recyclability. We continually improve the material and performance of our products, as well as the flow and noise characteristics. At the same time, we significantly reduce energy consumption. Close co-operation with universities and scientific institutes and the professorship we endow in the area of power engineering and regenerative energies allows us to profit from the latest research findings in these fields – and at the same time ensure highly qualified young academics.

## **GreenTech is eco-friendly production.**

GreenTech also stands for maximum energy efficiency in our production processes. There, the intelligent use of industrial waste heat and groundwater cooling, photovoltaics and, of course, our own cooling and ventilation technology are of the utmost importance. Our most modern plant, for instance, consumes 91% less energy than currently specified and required. In this way, our products contribute to protecting the environment, from their origin to their recyclable packaging.

**GreenTech is acknowledged and certified.**

Every step in our chain of production meets the stringent standards of environmental specialists and the public.

This supports our position as Germany's most sustainable company 2013, as does the DEKRA Award 2012 we received in the category "Umwelt – Herausforderung Energiewende / Environment – Challenge: Transition to more sustainable energy systems", to name only a few of a large number of examples. The environmental advantage gained in the performance of the products developed from our Green-Tech philosophy can also be measured in the fulfillment of the most stringent energy and environmental standards. In many instances, our products are already well below the thresholds energy legislation will impose a few years from now – several times over.

**Our customers profit from this every day.**

The heart of GreenTech is future-oriented EC technology from ebm-papst. The EC technology at the core of our most efficient motors and fans allows efficiency of up to 90%, saves energy at a very high level, significantly extends service life and makes our products maintenance-free. These values pay off not only for the environment, but every cent also pays off for the user! All ebm-papst products – even those for which GreenTech EC technology does not (yet) make sense from an application viewpoint – feature the greatest possible connection of economy and ecology.

GreenTech means  
ecologically improving  
every new product.

# Expertise and technology

## Drive expertise

For the past 60 years, all conceivable types and applications of drive engineering have played an essential role at ebm-papst. A commitment that is the foundation for the development of optimum drive solutions – regardless of the type of fan and its usage. DC fans are generally equipped with electronically commutated external rotor motors; in order to save as much space as possible, commutation electronic components are integrated in the hub of the fan. Our AC fans are mostly driven by shaded-pole or capacitor motors based on the external rotor principle. In the 3900 and 9900 range of particularly slim fans, internal rotor motors are used.

## Low-noise performance

Our aerodynamically optimised design and high mechanical precision produces outstanding noise properties in series production. So-called "soft" commutation electronics of the DC fans ensure an excellent noise performance. By avoiding steep switching edges when the individual coils are switched, this reduces the structure-borne noise from the motor. Computer-aided measurements and series of analyses performed in a state-of-the-art sound measuring chamber are conducted on each fan model from the very beginning.

## Long service life

The bearing system plays a vital role both in the long life time and quietness of device fans. The SINTEC compact bearing provides most of the device fans with a proven bearing system. Constant low noise during the entire operating time and considerably lower shock sensitivity are the outstanding features of this bearing technology. In addition, with regard to temperature endurance, Sintec compact bearings can be used without problems in most applications. Despite the slightly higher noise and shock sensitivity of ball bearings, this bearing technology should be given preference for fans exposed to extreme thermal and adverse application conditions (e.g. extreme environmental conditions, critical installation position, etc.). The service life data provided in this catalogue is based on extensive service life tests and mathematically / scientifically proven service life calculations. Our product descriptions are continuously updated with all relevant data obtained from long-term tests.

### Streamline: Aerodynamics

With the aid of state-of-the-art computer programs, we are able to optimise the fan impellers and the inner shape of the housing. Air output and available motor performance are exactly matched with the size of fan. This guarantees the low noise that is typical for ebm-papst, even at high back pressure.

### Sturdy construction – in metal or plastic

Fans of all-metal construction: Sturdy and resistant. The housing is made of an aluminium alloy whereas the metal surfaces that are subject to corrosion are permanently protected by an impact- and abrasion-resistant electrophoretic baked enamel. This particular version is highly recyclable. Fans with fibreglass-reinforced plastic housing and impeller: Excellent stability and low weight distinguish this highly efficient fan concept. Combinations of metal housing and plastic impeller unite the advantages of both types of design.

### Product images

The dimensioned drawings and product photos that appear in the catalogue are for orientation purposes and may differ in some details from the actual product design.

### Product liability

Motors and fans from ebm-papst are components intended for proper installation. The customer bears responsibility for the overall end product.

### Safety is included

It goes without saying that all ebm-papst fans conform to the approval requirements of the VDE (Association of German Electrical Engineers) and the standards and regulations of UL and CSA. All fans conform to the European Standard EN 60335 or EN 60950 plus those of the UL (Underwriters Laboratories) and CSA (Canadian Standards Association). With few exceptions, our DC fans are designed to meet the requirements of protection class 3 / protection class voltage. AC fans are protection class 1. ebm-papst fans meet the highest requirements of electrical safety. All design variants feature reverse polarity and locked rotor protection.

### Quality in detail

It is in the important details where the motto "made by ebm-papst" comes into its own: Consistent adherence to development and design processes and a targeted commitment to quality along the entire process chain are the foundation for the fans' above-average service life.

100.000 hours and above are now possible.

The no-compromise ebm-papst quality assurance spans over all process levels – from the choice of materials and the use of carefully selected, certified suppliers, from the production of parts up to final assembly. These details combine to result in reliable fan products with an above-average service life.

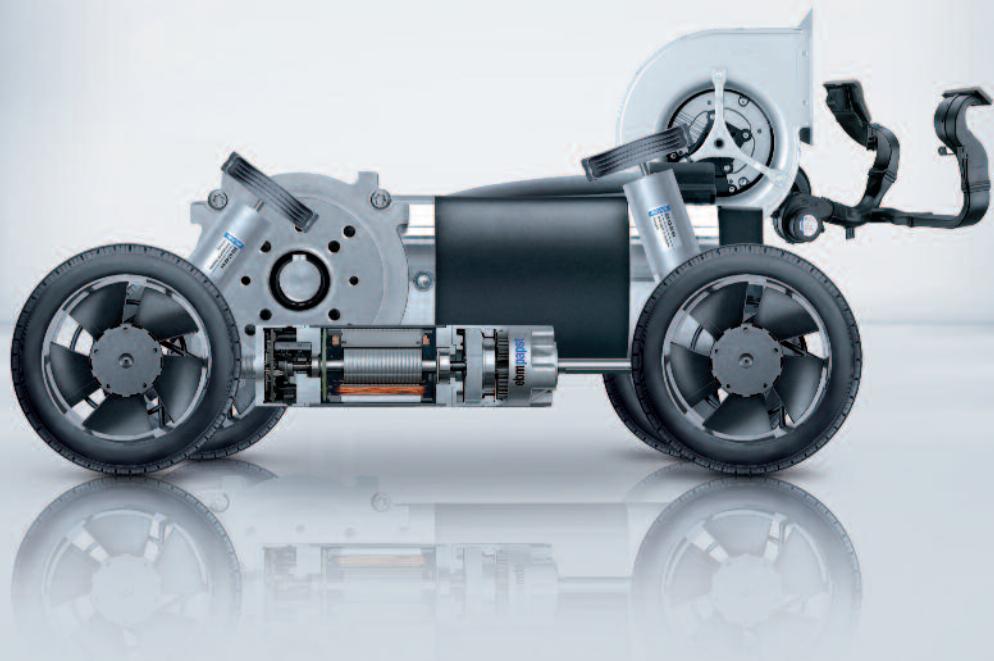

### ErP 2015 ErP guidelines

All products with power consumption between 125 W and 500 kW are subject to the European "Energy-related Products Directive" (ErP) for improving energy efficiency, with the first stage coming into force from 2013 and the second as of 2015. Thanks to ground-breaking GreenTech EC technology, all of our fans and motors in these performance classes already exceed the ErP Directive today.

# Tailor-made to meet your special requirements

## **Practice-oriented: Fans – customised and intelligent**

*ebm-papst has always developed customer-specific intelligent fans which meet the exact requirements of the application. We provide a wide range of standard fan types, in many sizes and designs; with intelligent motor features, monitoring and control functions as well as special designs for use under extreme conditions. They are all based on the standard type fans which you will find in this catalogue. Special fan types for your application can be produced in economical batch sizes. Our expert engineers will assist you in selecting the right configuration.*

### **Innovation at its best:**

Vario-Pro® with “intelligence inside”. Its programmed intelligence thanks to customer-specifically configured software modules makes the cooling of electronics even more economical and flexible. For example, temperature-dependent speed profiles are possible with a number of freely selectable interpolation points. External speed settings and a variety of combinable alarm and tachometer functions can also be programmed. The digital motor management achieves high control accuracy.

### **Higher degree of protection for every type of application**

ebm-papst provides, on request, many fan series in versions which conform to the requirements of degree of protection IP 54 and IP 68: Their stator and all electrical components are fully encapsulated. Stainless steel ball bearings can be used for operation in particularly aggressive media and use under extreme environmental conditions, thus providing additional reliability.

### **Virtually everything is possible**

Regardless of your cooling and ventilation tasks, we develop the right solution and what is more, the most economical one. Based on the fans listed in this catalogue, well over 4000 different versions are available.

### **Temperature-controlled fans**

Fans with temperature-controlled speed have particularly quiet cooling characteristics. Thanks to integrated IC technology, they adapt their speed to the current cooling requirements, which results in a drastic reduction of noise in most operating modes. A temperature sensor provides the fan with thermal information: either externally via a single lead or integrated into the hub of the fan.

### **Speed setting via interfaces**

With a wide range of DC fans with separate control input, ebm-papst provides an alternative to the NTC-controlled types of fans. They are especially suitable for systems and units which already have standard interfaces for varying speed via internal switching and control circuits.

The main applications are units which demand load-dependent individual speed profiles or systems with stand-by minimum cooling requirements and varied speed increase at varying power peaks.

### **“Electronic tachometer” thanks to sensor signal**

Do you wish to be informed about the current fan speed at all times? ebm-papst has fans with an integrated “electronic tachometer” which registers the actual value of the fan speed. Via an integrated sensor, the fan generates speed-dependent signals which can be directly utilised. Depending on the number of poles of the motor, 2, 3 or 6 pulses per revolution are generated.

### **Alarm signal for more safety**

If your application requires monitored fan operation, in addition to speed monitoring, ebm-papst also provides a multitude of varying alarm signals. Depending on the type of fan in question, the signal is either static, already evaluated or interface-compatible.

The alarm signal output provides reliable longterm monitoring and a status signal if critical operating conditions evolve.

### **S-Force**

The new measure of things!

When you need to provide extremely fast, powerful and efficient cooling for electronic components of all kinds, the generation of S-Force high-performance fans finishes first: in air performance, pressure build-up and technology. Extremely efficient drives and optimised aerodynamics form the core technology of the S-Force fans, which we offer in both an axial and brand-new centrifugal model.

### **S-Panther**

S-Panther power delivered quietly. Wherever there is need for power and reduced noise, fans from the S-Panther range are the right solution. A strong pressure saddle curve at optimum air flow provides the power of a real big cat.

# Optional special versions

(see chapter DC fans - specials)

In the catalogue, a text box in the upper right corner provides information on the special designs which are technically possible in the fan range.

Please note that these special versions are not possible for all voltages and speeds, and not in all combinations. The special versions are designed for specific customers and projects and are not usually available off the shelf.

## Speed signal /2, /12

The fan uses a separate wire to output information about its speed, and thus about the speed of the rotor. For technical details, please refer to page 168 ff.

## Go- / NoGo-alarm /37, /39

The fan uses a separate wire to output a static signal when it is stationary, thus providing information about whether or not the rotor is turning. For technical details, please refer to page 175 f.

## Alarm with limit speed /17, /19

If one of the speeds defined in the fan electronics is not met, the fan conveys via a static signal that the set limit speed has not been met. For technical details, please refer to page 172 ff.

## External temperature sensor

A NTC resistor (negative temperature coefficient) is attached to the fan via a separate wire and the fan changes its speed depending on the temperature on the NTC. For technical details, please refer to page 178.

## Internal temperature sensor

In this case, the NTC is integrated into the fan and the fan changes its speed depending on the temperature at the NTC. For technical details, please refer to page 178.

## PWM control input

The speed of the fan can be changed via a pulse-width-modulated signal. This signal is applied to a specially provided wire. For technical details, please refer to page 179.

max. 44 m<sup>3</sup>/h

## DC axial fans

□ 60 x 25 mm

- Material: Housing: GRP<sup>11</sup> (PBT)  
Impeller: GRP<sup>11</sup> (PA)
- Direction of air flow: Exhaust over struts
- Direction of rotation: Clockwise, seen on rotor
- Connection: Via single wires AWG 22, TR 64
- Highlights: Developed for applications with demanding environmental requirements
- Mass: 70 g

- Possible special versions:  
(See chapter DC fans - specials)
- Speed signal
- Go- / NoGo-alarm
- Alarm with limit speed
- External temperature sensor
- PWM control input
- Analog control input
- Humidity protection
- Salt fog protection
- Degree of protection: IP 54 / IP 68

Possible special designs are depicted on the catalogue page.

## Analog control input

The speed of the fan can be changed via a control voltage. This control voltage is applied to a specially provided wire. For technical details, please refer to page 179.

## Multi-option control input

The fan has a control input that the user can trigger either using a PWM signal, an analog signal or a resistor. For technical details, please refer to page 180.

## Humidity protection

Protection for the fan's electronics against moisture and condensation. For technical details, please refer to page 181.

## Degree of protection IP 54\* / IP 68\*

Protection of motor and PCB board against splashed water and humidity. For technical details, please refer to page 181.

## Salt fog protection

Protection of fan against the damaging effects of salt fog. For technical details, please refer to page 181.

## Direction of rotation

On many variants, the direction of rotation can be changed via a control input.

\* IP = International degree of protection marking

# Types of fans and their function

## Axial fans:

### **High air flow with medium to relatively high pressure build-up**

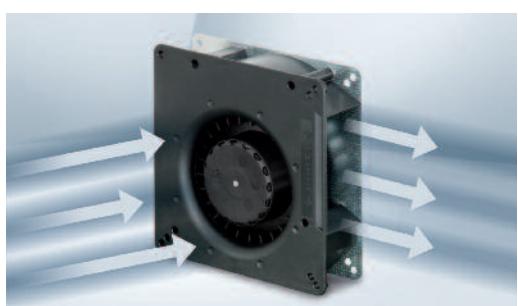

The air flow in axial fans, whose impeller is similar to that of a propeller, is conducted to a great extent parallel to the axis of rotation, in other words in the axial direction. Axial fans with free air delivery at zero static pressure have the lowest power input that rises with increasing back pressure. Axial fans for cooling of electronic equipment are mostly equipped with external housing and an electric motor integrated into the fan hub. This compact design allows space-saving accommodation of all devices; the flange is equipped with mounting holes.

## Diagonal fans:

### **High flow rate at relatively high pressure build-up**

At first glance diagonal fans only differ slightly from axial fans. Intake is axial, whereas exhaust is diagonal. Due to the conical shape of the wheel and housing, the air is pressurised more. In direct comparison with axial fans of the same size and comparable performance, these fans are distinguished by the lower operating noise at high pressures.

## Centrifugal fans:

### **High pressure build-up at limited flow rate**

Many of the cooling problems that occur can be optimally solved by axial and/or diagonal fans. If, for example, the required cooling air has to be conducted at an angle of 90° or if even high pressure is necessary, centrifugal fans are more effective. For your application, ebm-papst offers not only complete centrifugal fans but also motor/impeller combinations without external housing.

## Tangential fans:

### **High flow rate at low pressure**

Tangential fans are used above all-, for large-surface air flow in devices. The air flows through the roller-shaped impellers twice in the radial direction: in the intake area from the outside to the inside and in the outflow area from the inside to the outside. Whirls form in the roller due to the vanes which guarantee a steady flow of air through the impeller.

# Selecting the correct fan

## 1. Dissipated energy

A large amount of the energy consumed by electrical and electronic devices is converted into heat. In selecting the correct fan, therefore, it is important to determine the dissipated energy that must be removed. The electrical power consumption of the unit to be cooled, often represents a suitable value for this purpose.

## 2. Permissible temperature rise

The air flow which the selected fan is required to generate, is determined by the dissipated energy and the permissible rise ( $\Delta T$ ) of the cooling air flow (from entry to exit of the device to be cooled). The max. allowable  $\Delta T$  depends greatly on the temperature sensitivity of the individual device components.

$\Delta T = 5\text{ K}$  means e.g. that the average air flow leaving the device to be cooled may only be  $5^\circ\text{C}$  warmer than the ambient temperature (a large volume of air is required for this purpose). A lower air flow rate is sufficient if a higher temperature difference (e.g.  $\Delta T = 20\text{K}$ ), can be tolerated.

## 3. Required cooling air flow

- In the below diagram a horizontal line is drawn from the dissipated energy to intersect with the selected  $\Delta T$  line.
- Read down from this point to obtain the required value for the cooling air flow. The diagram is based on the following formula:

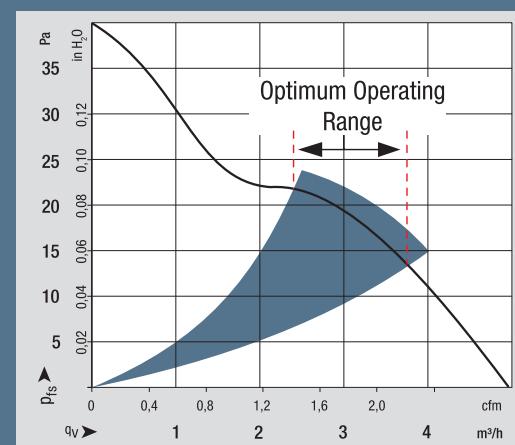

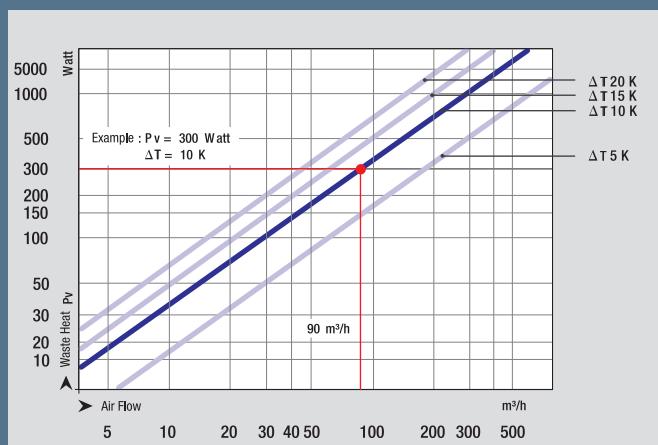

$$q_V = \frac{P_V}{C_{PL} \cdot \rho_L \cdot \Delta T}$$

## 4. Optimum operating range

The required fan, however, must also be able to deliver a suitable static pressure increase  $\Delta p_f$ , in order to force the cooling air through the device. A fan must therefore be selected that provides the required air flow performance within its optimum operating range (see also the air performance curves under technical data).

## 5. Fan selection

If the requirements of an application are fulfilled by more than one fan, the noise level, space requirements, economy and ambient conditions will assist in making the final choice.

## Definitions

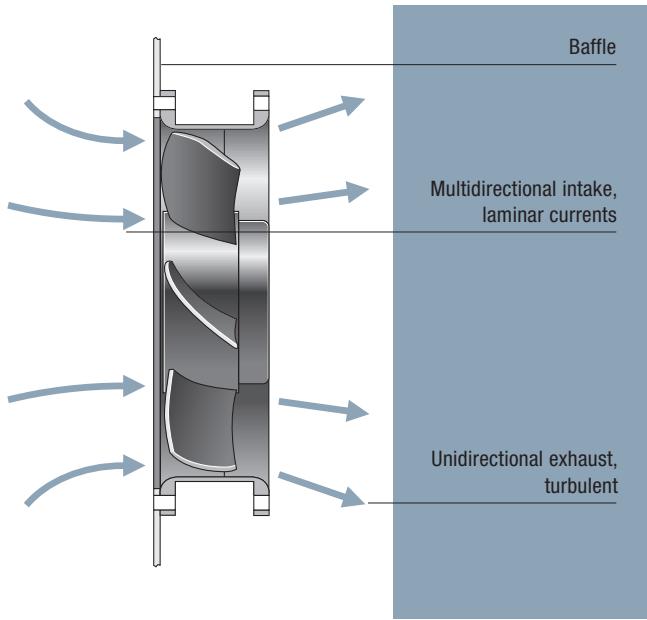

$P_V$  = amount of heat to be dissipated in [W]  
 $C_{PL}$  = specific heat capacity of air in [ $\text{J/kg/K}$ ]  
 $C_{PL} = 1010 \text{ J/kg/K}$

$\rho_L$  = air density in [ $\text{kg/m}^3$ ]  
 $\rho_L = 1,2 \text{ kg/m}^3$   
 $\Delta T = T_1 - T_2$  temperature difference in [K] between inlet and outlet

# Fan installation

## Intake or exhaust side installation

Under ideal conditions, the operating point is represented as the intersection between the fan and loss curves, regardless of whether the fan is positioned at the air intake or exhaust side of the device. In addition to ensuring the required flow rate, several additional aspects must be considered for determining an appropriate fan concept. The intake air currents of a fan are mainly laminar, comprising nearly the entire suction area. By contrast, the exhaust air of a fan is generally turbulent, while it flows on a preferred direction, e.g. axial for an axial fan. The turbulences of the exhaust intensify the heat transfer from components within the air currents, so that mounting the fan at the air intake side of the device is recommended for cooling and heating. Mounting the fan at the device intake is also advantageous because the fan will not be subjected to the dissipated heat of the device. Therefore, it operates at low ambient temperatures and has a higher life expectancy.

## Information on installation

When a fan is operated for the first time in an application, the user may have noticed that the flow rate in the device was lower than expected. What is the reason for this?

- The values stated in this catalogue were determined under optimum, constant and comparable measurement conditions.
- Ideal mounting conditions under which free air intake and exhaust are present are seldom feasible in practice. Quite frequently the fans must be mounted in close proximity to other components or cabinet panels. As a consequence, the intake and exhaust currents may be restricted, causing the air flow to diminish and the noise level to increase. Fans are particularly sensitive to obstructions which are positioned directly in front of the output cross section as they often cause an increase in tonal noise.

**Our advice:** The distance between the fan and adjacent components should be at least equal to the installation depth of the fan.

### Accident prevention

The turning rotor and the high speeds that are sometimes involved mean that our fan products carry an inherent risk of injury. They may only be operated after correct installation and with suitable protective facilities (e.g. with a guard grille). More information can be found in the internet at: [www.ebmpapst.com/safety](http://www.ebmpapst.com/safety)

# Connection instructions for S-Force fans

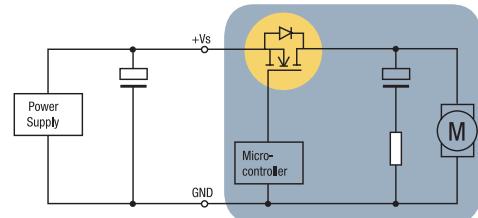

## Special features of S-Force fans

The S-Force series is the most powerful product series on the market. S-Force stands for the highest innovation in motor technology, fluid mechanics and electronics. The one-of-a-kind power density of the products requires special attention to the application at the customer's facility.

## Service life

Due to the high currents in the fans, the load on the electrolyte capacitors is greater, which reduces the service life of the capacitor. As a larger or additional capacitor cannot be housed in the fan, the capacitor must be housed in the supply line. If the power pack of the application has a corresponding capacitor, in some cases it may be possible to omit the external capacitor.

Fan	Capacitor required
<b>S-Force axial</b>	
8200 / 3200 JH3-JH4	no
4100 NH3 / NH4 / NH5 / NH6	no
4100 NH7 / NH8	yes
5300 / 5300 TD	no
6300 / 6300 TD / DV 6300	no
2200 FTD	no
<b>S-Force centrifugal</b>	
RET 97 TD	yes
RER 120 TD	yes
RER 133 TD	no
RER 160 NTDHH / RG 160 NTDHH	yes
REF 175 TD	no
RER 175 TD	no
RER 190 TD / RG 190 TD	no
RER 220 TD / RG 220 TD	no
RER 225 TDM / RG 225 TDM	no
RER 225 TD / RG 225 TD	no

Recommended measure: Additional external capacitor (thus must be installed as close to the fan as possible < 30 cm).

## Recommended capacitors

We recommend using the following capacitors from Rubycon:

24 VDC:

50 ZL 680  $\mu$ F; 12,5 mm x 30 mm or  
50 ZLH 680  $\mu$ F 12,5 mm x 30 mm

48 VDC:

100 YXG 470  $\mu$ F; 16 mm x 35,5 mm or  
100 ZLH 470  $\mu$ F 16 mm x 31,5 mm

Other capacitors with equal or greater capacitance and equal or lower serial resistance can also be used.

ebm-papst St. Georgen offers the following capacitors ex stock:

24 VDC: 1000  $\mu$ F / 50 V, 16 mm x 25 mm  
Art. No.: 992 0345 000 (LZ 354)

48 VDC: 680  $\mu$ F / 100 V, 18 mm x 40 mm  
Art. No. : 992 0355 000 (LZ 355)

# Service life

## Service life data from ebm-papst St. Georgen

Our fans catalogue gives three different values for the service life of each product. The first column usually states the service life  $L_{10}$  at 40°C. the second column usually states the service life  $L_{10}$  at  $T_{max}$ . Exceptions are marked in the column headings. The third column states the new value, life expectancy  $L_{10IPC}$  (40 °C).

Sound power level Ball bearings	Input power	Nominal speed	Temperature range	Service life $L_{10}$ (40 °C) ebm-papst Standard	Service life $L_{10}$ (40 °C) ebm-papst Standard	Life expectancy $L_{10IPC}$ (40 °C) see page 17	Curve
Bel(A)	Watts	rpm	°C	Hours	Hours		
5,2	■ ■	1,8	5 900	-20...+70	85 000 / 42 500	142 500	①
5,4	■ ■	1,5	6 300	-20...+70	85 000 / 42 500	142 500	②

Example of the service life figures on the catalogue page.

## Service life $L_{10}$ (40 °C) and $L_{10}(T_{max})$

The values given in the first two columns have been derived from intensive, in-house service life endurance tests, in which our products are operated in various positions at 40°C and 70°C until they fail. A fan is deemed to have failed when it deviates from its defined air flow and speed values, or when the operating noise becomes noticeable. Such tests can take several years before a representative number of failures have been registered, and even today, some fans are still in the process of endurance testing, even though they began tests in the 1980s. These fans are proof of the legendary "made by ebm-papst" reliability.

Test results are presented in a diagram and the service life of the product  $L_{10}$  at the temperature tested is determined on the basis of the Weibull distribution.

These tests have given us years of experience in the way various design parameters and temperatures can affect the service life of a product. Data for service life at various temperatures for new products can be stated with a very high degree of precision on the basis of tests, product specifications and of commonalities in the design of the product.

## New: Life expectancy $L_{10IPC}$ (40 °C)

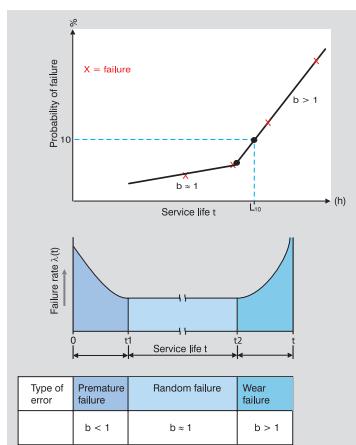

The new third service life column states the expected service life  $L_{10IPC}$ . This information is based on the international norm IPC 9591. Again here, the foundations for the service life values are our service life endurance tests at high ambient temperatures. The service life at temperatures below the test temperatures is calculated using fixed factors. This method produces much higher service life values, especially at room temperature (see diagram on right).

## Summary:

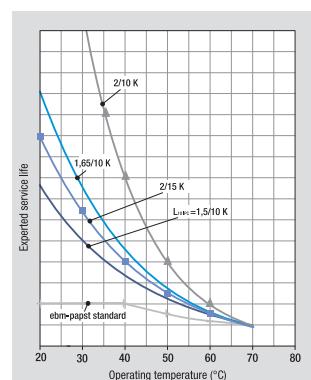

The life span calculations have been carried out to the best of our knowledge and are based on experience gained by ebm-papst. The specified  $L_{10}$  (40 °C),  $L_{10}(T_{max})$  and  $L_{10IPC}$  (40 °C) values all allow statements to be made about the theoretical calculated service life under certain assumptions. The values determined here are extrapolations from our own service life tests and from statistical variables. In the respective customer applications, different influences may occur which cannot be included in the calculations due to their complexity. The service life information is explicitly not a guarantee of service life, but strictly a theoretical quality figure.

Fans in an endurance test cabinet at ebm-papst St. Georgen.  
1500 fans are operated in temperature cabinets until they fail.

Bathtub curve and Weibull distribution.

Example of the influence of factors from various manufacturers on the expected service life.

# Definitions

## Nominal voltage (Volts)

The voltage at which the nominal values (the tabular values listed in this catalogue) were determined. The fan operation for DC fans is not limited to the nominal voltage. Fan speed and fan performance can vary according to the permissible voltage range that is specified on the nameplate of each fan. Be aware here that this is not a pulsed or modulated DC voltage.

## Frequency (Hz)

ebm-papst AC fans are made for operating frequencies of 50 Hz or 60 Hz. Their technical data alter accordingly.

## Air flow [ $\text{m}^3/\text{h}$ ]

The air performance of the fan in free air operation, i.e. the fan blows into the free space without static pressure build-up.

## Fan curves

The fan curves are determined in accordance with DIN ISO 5801 specifications on a dual-chamber test stand with intake-side measurement. This measurement technique closely approximates the operating conditions experienced in typical applications for fans and yields realistic performance curves. The curves apply to an air density of  $\rho = 1.2 \text{ kg/m}^3$ , corresponding to an air pressure of 1013 mbar at 20 °C. Variations in air density affect pressure

generation but not the flow rate. The pressure generated at other air densities may be estimated with the formula  $\Delta p_2 = \Delta p_1 (\rho_2 / \rho_1)$ . The nominal speed values, air flow and power input listed in the table were measured in free air operation with horizontal shaft at an ambient temperature of 20 +5 °C, air density  $\rho = 1.2 \text{ kg/m}^3$  after a warm-up period of 5 min.

## Optimum operating range

During operation, fans are required to produce an air flow with a simultaneous increase of pressure. These operating conditions are described in the section "Optimum Operating Range". The optimum operating range is therefore always indicated in this catalogue in the shaded area. In this range the fans operate best with respect to efficiency and noise level. Within this optimum operating range the noise level only fluctuates insignificantly.

## Noise [dB(A), Bel(A)]

### 1. Sound pressure level – dB(A)

Noise ratings of the fan in free air operation, i.e. at maximum flow rate.

### 2. Sound power level – Bel(A) / dB(A)

Extent of the overall sound radiation of the fan. The sound power level is determined in the optimum operating range.

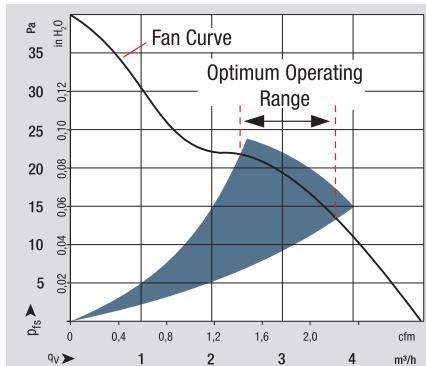

## PAPST Sintec® sleeve bearings

A particularly efficient bearing system with excellent qualities:

- Very precise, large sintered bearings
- Low running noise
- High service life expectancy
- Insensitive to shock and vibration

## Ball bearings

Precision ball bearings for particularly high ambient temperatures and high service life expectancy.

## Input power [Watts]

Input performance of the fan motor when operating free blowing at nominal voltage. Depending on the operating condition in the application, the power input may be higher.

## Temperature range [°C]

The permissible ambient temperature range within which the fan can be expected to run continuously.

## Service life [h]

### Service life L<sub>10</sub> at 40 °C and T<sub>max</sub>

Standard figures for service life at ebm-papst. These two temperatures are based on intensive, in-house endurance tests and on the experience more than 60 years developing fans.

### Life expectancy L<sub>10IPC</sub> (40 °C)

Information calculated in line with the norm IPC 9591. Data based on the internal expected service life at 70°C, more optimistically extrapolated to 40°C.

We expressly state that none of the information or data in this catalogue is to be construed as a guarantee or warranty of properties.

## Unit conversion

### Air flow

1 cfm = 1,7  $\text{m}^3/\text{h}$

1 l/s = 3,6  $\text{m}^3/\text{h}$

1 l/min = 0,06  $\text{m}^3/\text{h}$

### Pressure

1 Pa =  $1 \times 10^{-5}$  bar

1 inch  $\text{H}_2\text{O}$  = 249 Pa

1 mm  $\text{H}_2\text{O}$  = 9,81 Pa

# Standard test equipment to test the fan characteristics

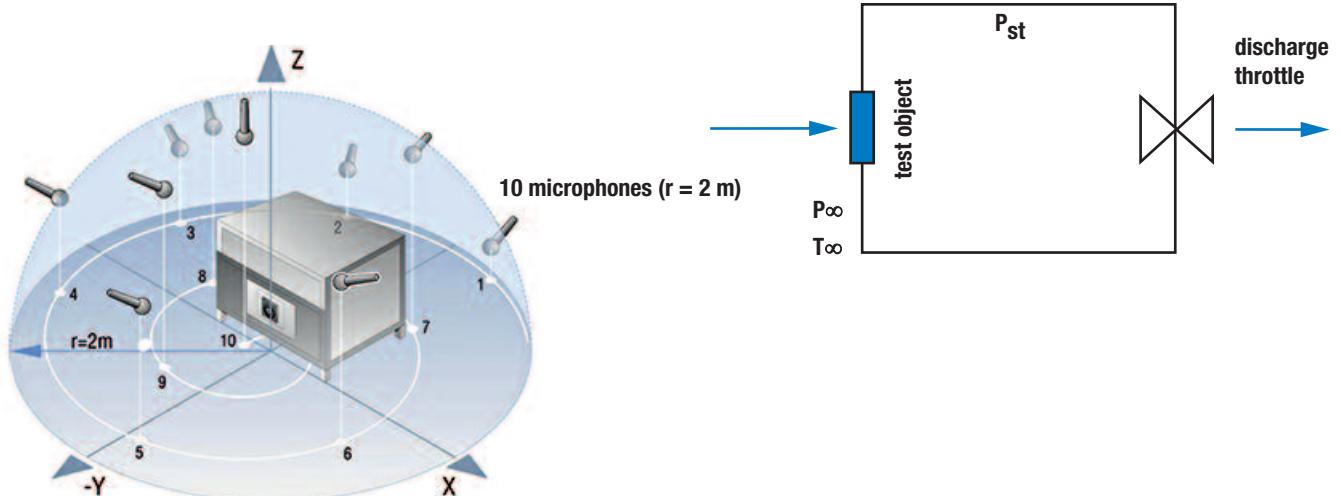

## Pressure-flow rate:

Blow-down test facility acc. ISO 5801

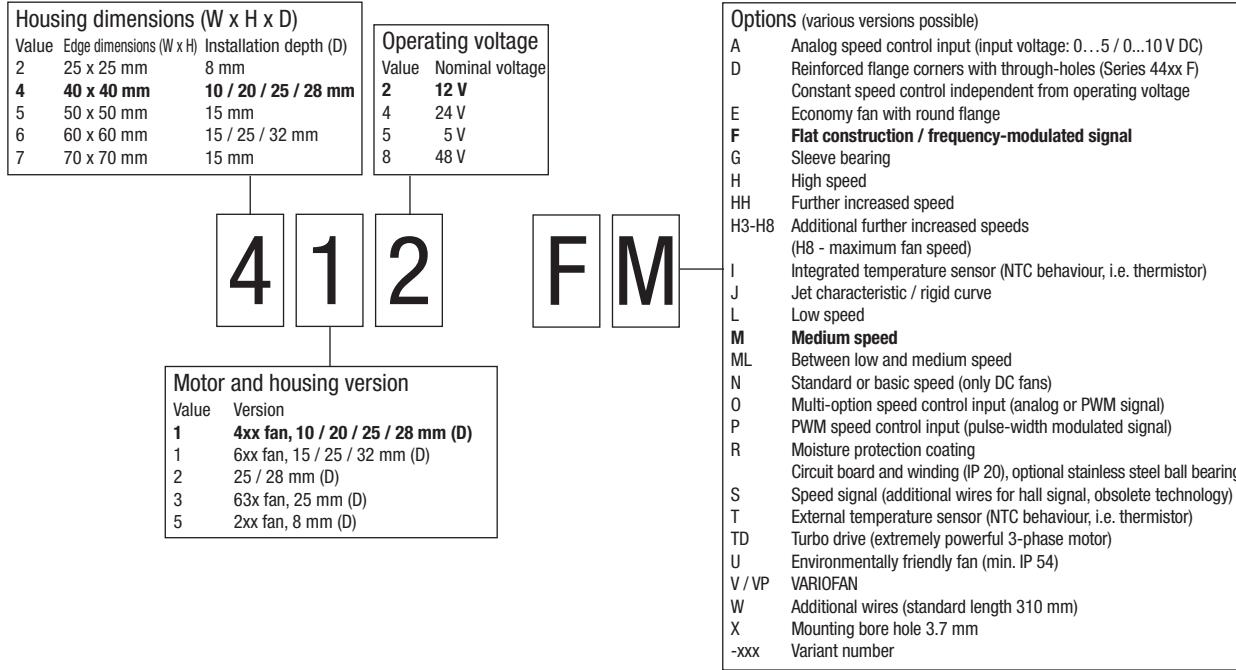

## Sound power level pressure-flow rate:

Outlet side regulated test rig in semi-anechoic chamber according to ISO 10302

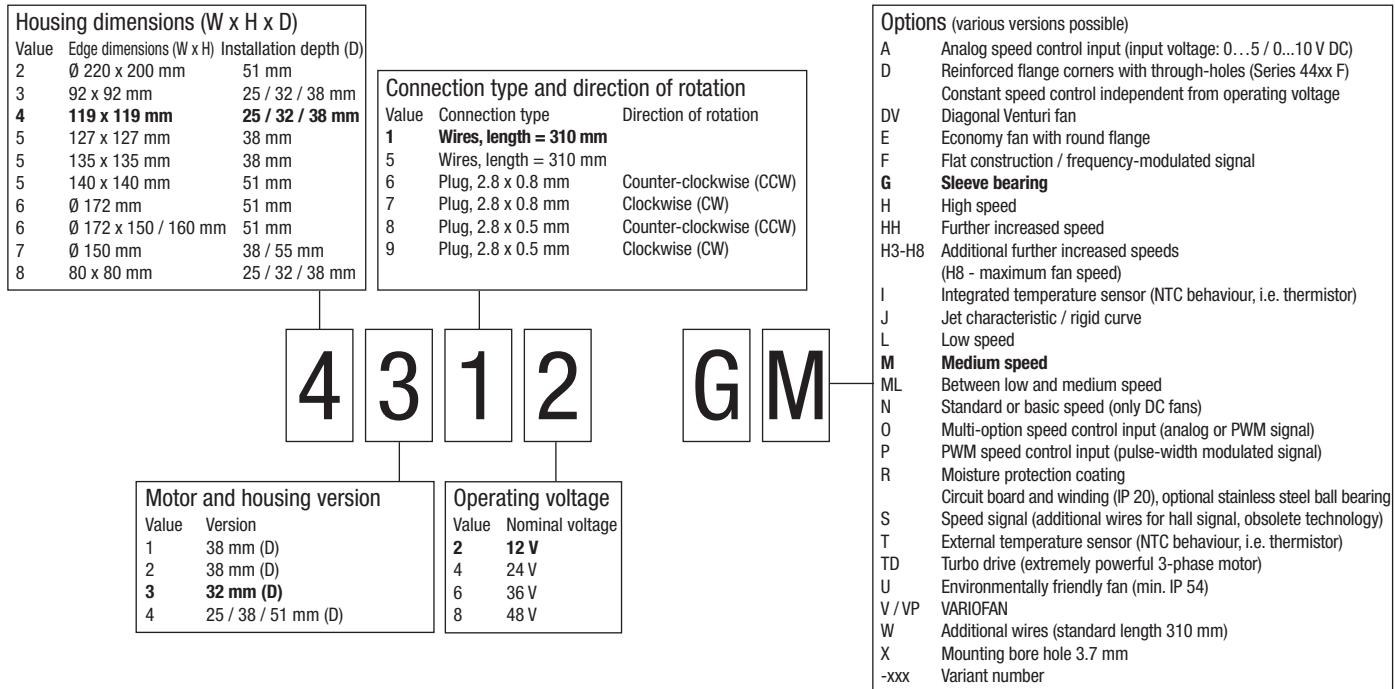

# Type code

## 3-digit DC axial fan e.g. 412 FM

## 4-digit DC axial fan, e.g. 4312 GM

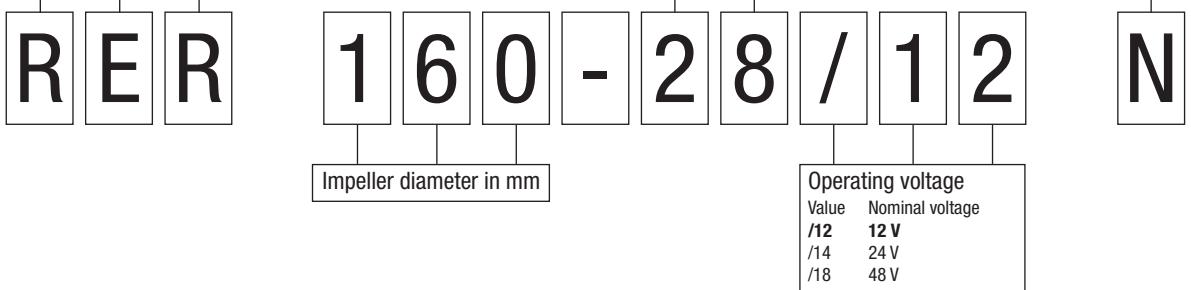

# Type code

**DC centrifugal fan e.g. RER 160-28/12 N**

Type	Housing and fan impeller versions
Housing	Impeller blade design
RE	None Non-curved, no direction of rotation set
REF	None Forwards/backwards-curved impeller blades, flat
<b>RER</b>	<b>Backwards-curved impeller blades</b>
RET	Forwards-curved impeller blades
RG	Square Forwards/backwards-curved impeller blades
RL	Round Forwards-curved impeller blades
RLF	Round Forwards/backwards-curved impeller blades, flat
RV	Round Forwards-curved impeller blades

## Options (various versions possible)

A	Analog speed control input (input voltage: 0...5 / 0...10 V DC)
D	Reinforced flange corners with through-holes (Series 44xx F)
E	Constant speed control independent from operating voltage
F	Economy fan with round flange
G	Flat construction / frequency-modulated signal
H	Sleeve bearing
HH	High speed
H3-H8	Further increased speed (H8 - maximum fan speed)
I	Additional further increased speeds
J	(H8 - maximum fan speed)
L	Integrated temperature sensor (NTC behaviour, i.e. thermistor)
M	Jet characteristic / rigid curve
N	Low speed
O	Medium speed
ML	Between low and medium speed
P	Standard or basic speed (only DC fans)
R	Multi-option speed control input (analog or PWM signal)
S	PWM speed control input (pulse-width modulated signal)
T	Moisture protection coating
TD	Circuit board and winding (IP 20), optional stainless steel ball bearing
U	Speed signal (additional wires for hall signal, obsolete technology)
V	External temperature sensor (NTC behaviour, i.e. thermistor)
VP	Turbo drive (extremely powerful 3-phase motor)
W	Environmentally friendly fan (min. IP 54)
X	Additional wires (standard length 310 mm)
-xxx	Mounting bore hole 3.7 mm
	Variant number

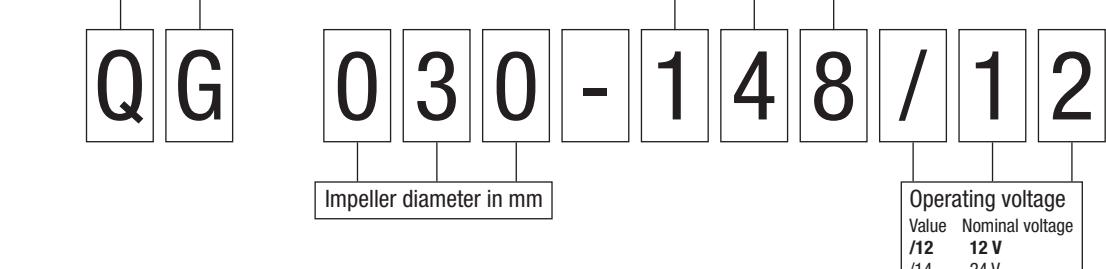

**Tangential blower e.g. QG 030-148/12**

Type	Housing and fan impeller versions
Housing	Impeller blade design
QG	Round Compressor drum

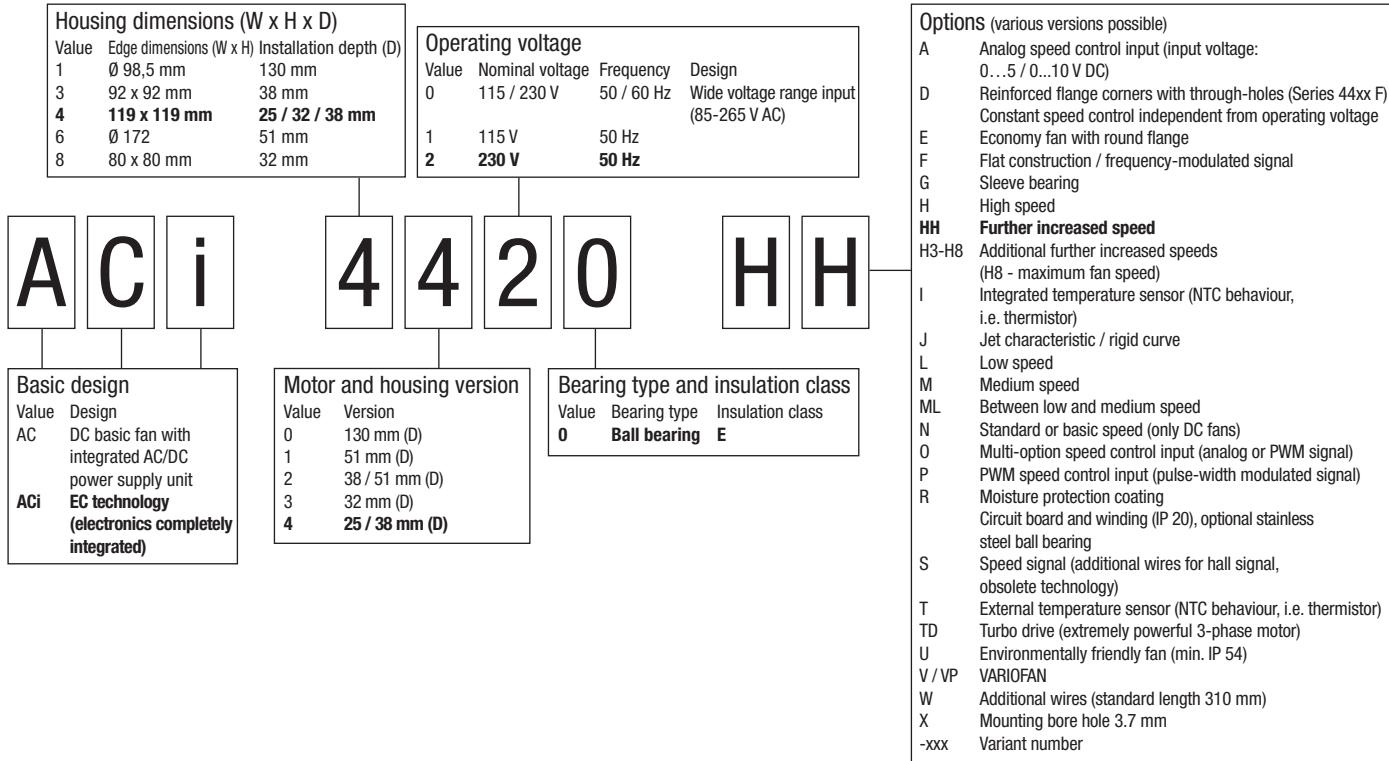

## Housing dimensions (W x H)

Value	Edge dimensions (W x H)	Impeller length	Total length
148	48 x 50 mm	148 mm	201 mm
198	48 x 50 mm	198 mm	258 mm
303	48 x 50 mm	303 mm	363 mm
353	48 x 50 mm	353 mm	413 mm

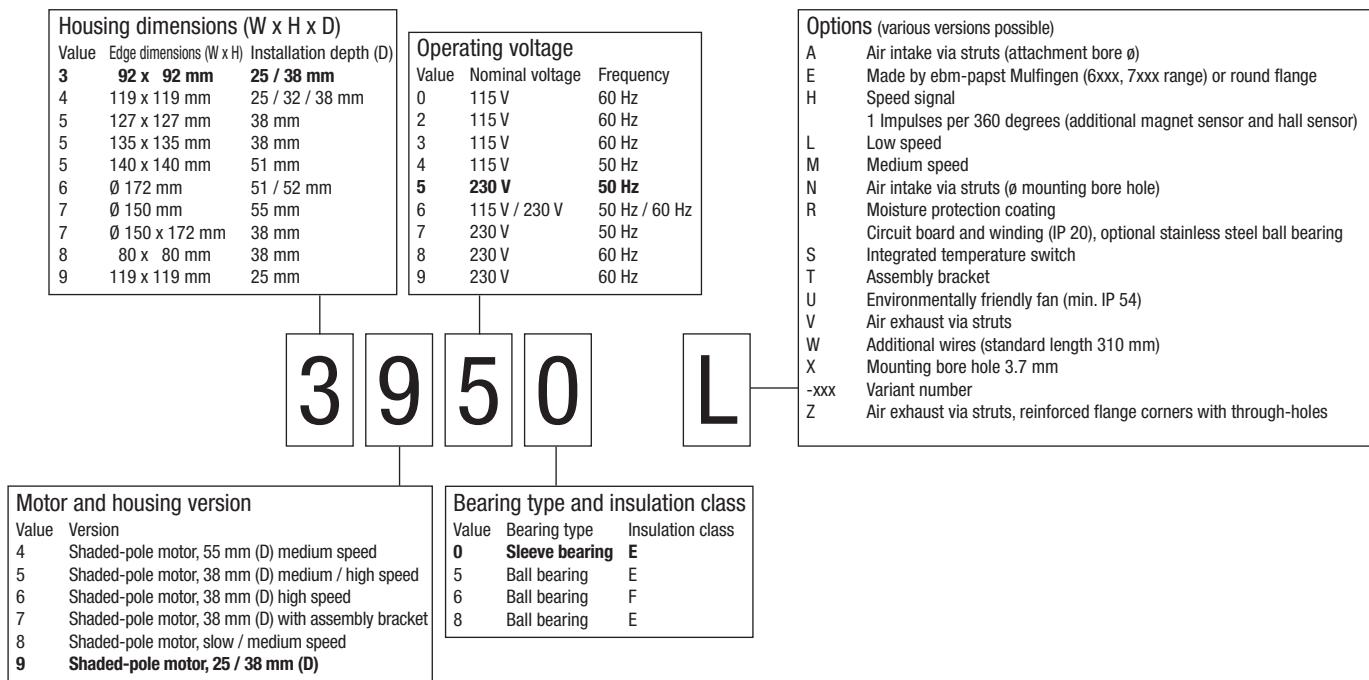

# Type code

## 4-digit GreenTech EC compact fans axial e.g. ACi 4420 HH

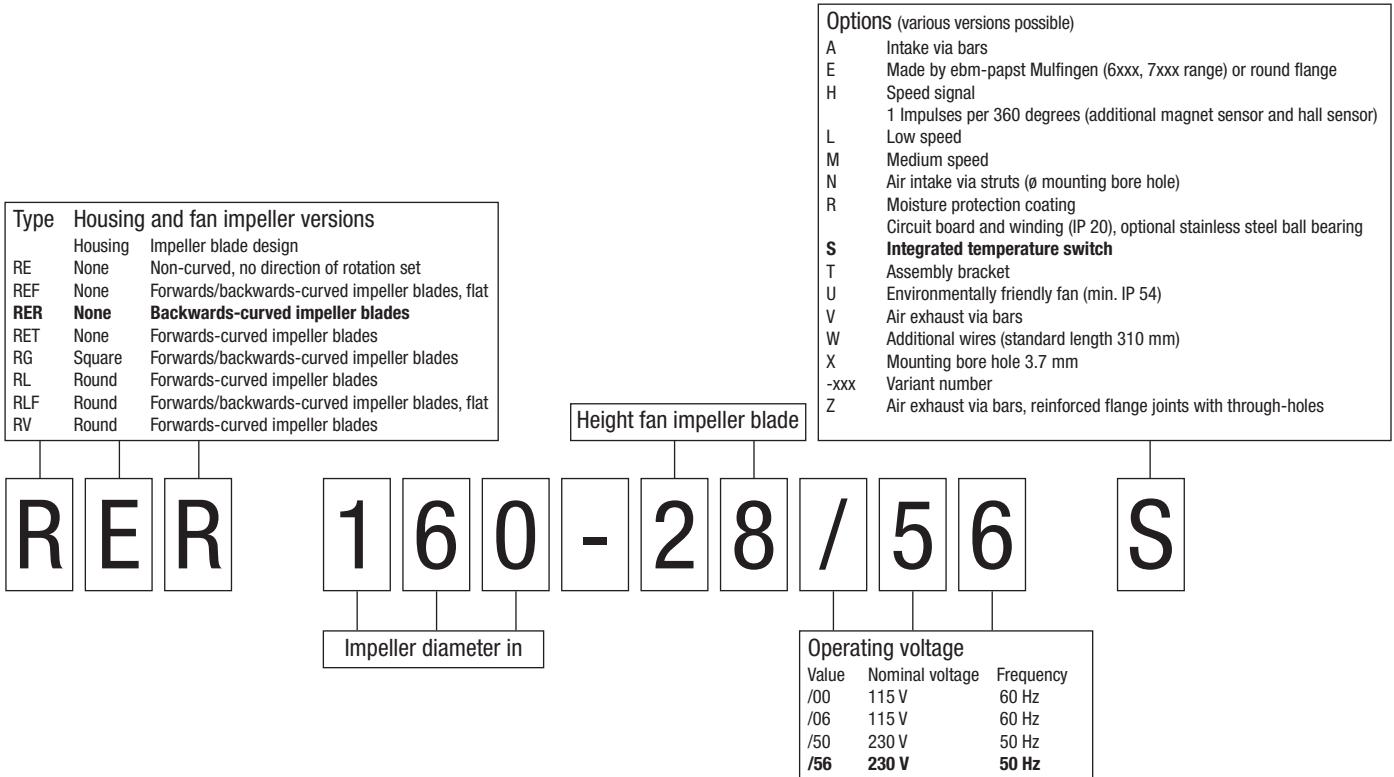

## AC axial fan e.g. 3950 L

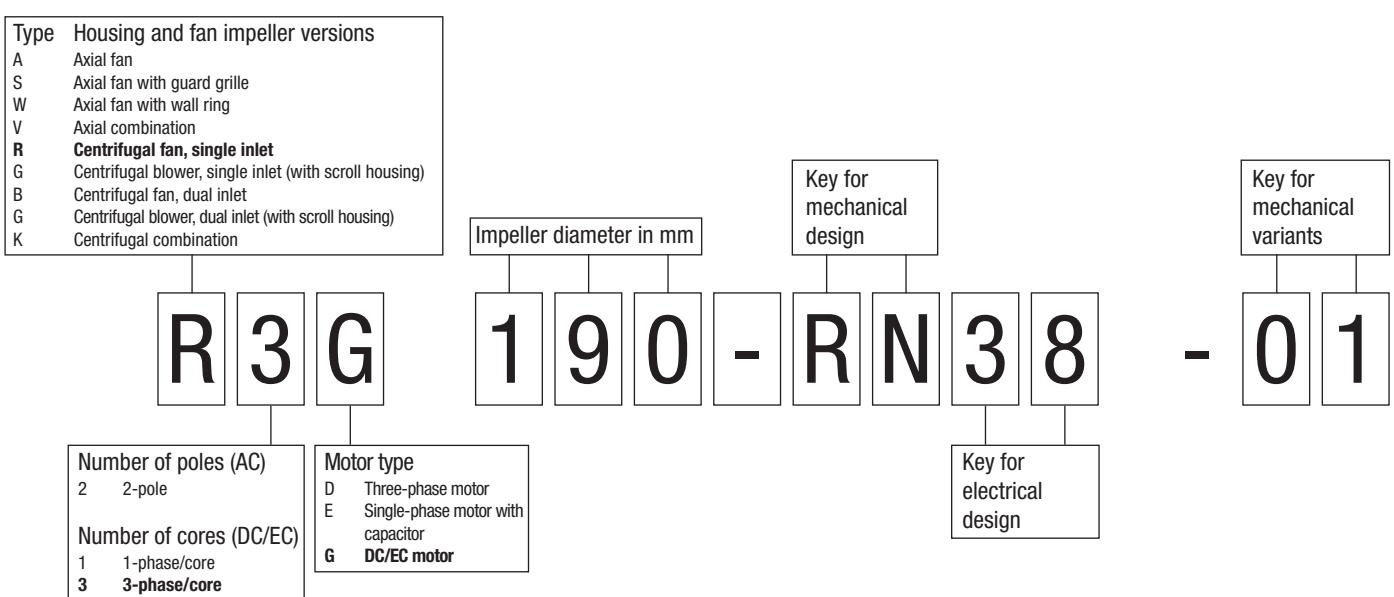

# Type code

## AC centrifugal fan e.g. RER 160-28/56 S

## DC centrifugal fan e.g. R3G 190-RN 38-01

Note: This type code specifies fans from ebm-papst Mulchingen and can be used to clearly identify and order them:

## Technical information

### Range of fans

ebm-papst offers you the widest full product line of DC axial and diagonal fans: From 25 mm to 280 mm in size. Every single type of fan can be optimally integrated in the respective device concept. The highly economical brushless motor technology of these fans provides a unique variety of intelligent innovations that can be realised today at prices that would have been unthinkable just a few years ago.

### Electronic protection against reverse polarity

ebm-papst DC fans have electronically commutated drives with electronic protection against reverse polarity. The electronics are conveniently located in the fan hub.

### Product life expectancy

A distinctive feature of DC fan technology is the convincingly high product life expectancy. Thanks to the excellent efficiency of the brushless drives, the thermal load of the bearings is reduced, thus considerably increasing the life expectancy of the fans.

### Degree of protection

DC fans with sleeve and ball bearings are powered by class E insulated motors. All ebm-papst fans conform to the requirements of degree of protection IP 20. Fans conforming to IP 54 / IP 68 and special degrees of protection are also available.

### Voltage range

Many of our DC fans can be operated on voltages that are up to 50% lower and 25% higher than their nominal voltage (see Voltage range in the technical tables). This enables the air performance to be adapted to the cooling requirements and allows the noise to be reduced, even if the fan does not have a control input.

### Closed-loop speed control and monitoring

Closed-loop speed control and function monitoring are becoming increasingly important in many applications. ebm-papst offers many fans in the standard design with a control input and open collector speed signal.

### S-Force

The new S-Force fans with their extremely high blower capacity of up to 1100 m<sup>3</sup>/h and pressure build-up of up to 1400 pascals are capable of dealing with the extreme heat load. If needed, these fans can produce up to 100% more output under full load and they work with a much broader delivery bandwidth than current models. This makes them ideal for equipment and systems with a high density of components. Thanks to intelligent motor features, they can be individually adapted for any application. S-Force fans are available in 5 standard dimensions.

### S-Panther

S-Panther power delivered quietly. Wherever there is need for power and reduced noise, fans from the S-Panther range are the right solution. A strong pressure saddle curve at optimum air flow provides the power of a real big cat.

Subject to alterations

\* at 55 °C

Air performance measured as per ISO 5801,  
Installation category A, without accidental contact.  
Noise: Total sound power level L<sub>WA</sub> ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level L<sub>PA</sub> measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement  
set-up and may vary depending on the installation situation.  
In case of any deviation to the standard setup, the values have  
to be checked and reviewed once installed or fitted.  
For detailed information see  
<http://www.ebmpapst.com/general conditions>

max. 9 m<sup>3</sup>/h

## DC axial fans

□ 40 x 10 mm

- **Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
- **Direction of air flow:** Exhaust over struts
- **Direction of rotation:** Counter-clockwise, seen on rotor
- **Connection:** Via single wires AWG 28, TR 64
- **Highlights:** Some models are suitable for use at high ambient temperatures
- **Mass:** 17 g

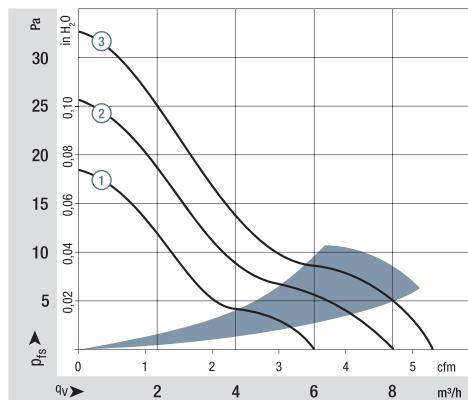

- **Possible special versions:**  
(See chapter DC fans - specials)
  - Speed signal
  - Go- / NoGo-alarm
  - Humidity protection

1) Fibreglass-reinforced plastic

Subject to alterations

Air performance measured as per: ISO 5801,  
Installation category A, without accidental contact.  
Noise: Total sound power level  $L_{WA}$  ISO 103002  
measured on half-space of 2 m;  
Sound pressure level  $L_p$  A measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement  
set-up and may vary depending on the installation situation.  
In case of any deviation to the standard setup, the values have  
to be checked and reviewed once installed or fitted.  
For detailed information see

Subject to alterations

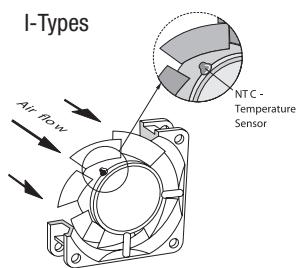

Air performance measured as per:  
ISO 5801, installation category A,  
without accidental contact.  
Noise: Total sound power level L<sub>WA</sub>  
ISO 103002 measured on half-sphere  
of 2 m; Sound pressure level L<sub>pA</sub>  
measured at 1 m distance to fan axis.  
The acoustic values are only valid for  
the described measurement set-up  
and may vary depending on the  
installation situation. In case of any  
deviation to the standard set-up,  
the values have to be checked and  
reviewed once installed or fitted.  
For detailed information see  
<http://www.ebm-past.com/general-conditions>

## V-Types

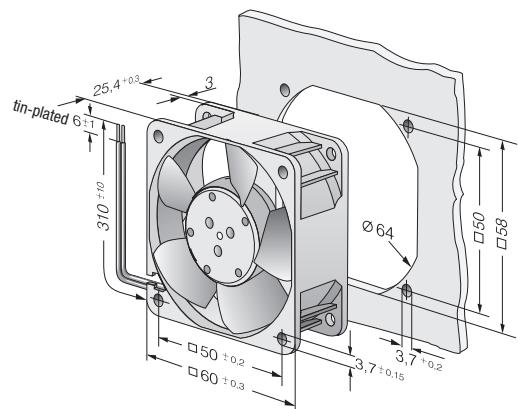

The temperature sensor for controlling the motor speed is not included in delivery.  
Temperature sensor LZ 370 see accessories.

## I-Types

Temperature sensor (NTC-resistor)  
for controlling the motor speed is  
positioned directly in the air flow.

max. 82 m<sup>3</sup>/h

## DC axial fans

□ 60 x 32 mm

- **Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
- **Direction of air flow:** Exhaust over struts
- **Direction of rotation:** Clockwise, seen on rotor
- **Connection:** Via single wires AWG 24, TR 64
- **Mass:** 100 g

- **Possible special versions:**  
(See chapter DC fans - specials)
  - Speed signal
  - Go- / NoGo-alarm
  - Alarm with limit speed
  - External temperature sensor
  - PWM control input
  - Analog control input
  - Humidity protection

Air performance measured as per: ISO 5801,  
Installation category A, without accidental contact.  
Noise: Total sound power level  $L_{WA}$  ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level  $L_p$  measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement  
set-up and may vary depending on the installation situation.  
In case of any deviation to the standard setup, the values have  
to be checked and reviewed once installed or fitted.  
For detailed information see  
<http://www.ebmpapst.com/general conditions>

- Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
- Direction of air flow:** Exhaust over struts
- Direction of rotation:** Counter-clockwise, seen  
on rotor
- Connection:** Via single wires AWG 24,  
TR 64
- Highlights:** Some models are suitable  
for use at high ambient  
temperatures until 85 °C
- Mass:** 95 g
- Possible special versions:**  
(See chapter DC fans - specials)
  - Speed signal
  - Go- / NoGo-alarm
  - Alarm with limit speed
  - External temperature sensor
  - Internal temperature sensor
  - PWM control input
  - Analog control input
  - Humidity protection
  - Degree of protection: IP 54 / IP 68

Subject to alterations

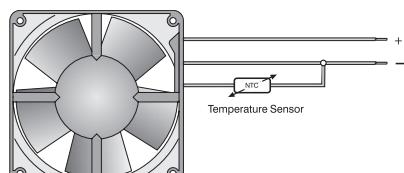

Air performance measured as per: ISO 5801, Installation category A, without accidental contact.

Noise: Total sound power level L<sub>WA</sub> ISO 103002 measured on half-sphere of 2 m; Sound pressure level L<sub>pA</sub> measured at 1 m distance to fan axis.

The acoustic values are only valid for the described measurement set-up and may vary depending on the installation situation. In case of any deviation to the standard setup, the values have to be checked and reviewed once installed or fitted. For detailed information see <http://www.ebmpapst.com/general-conditions>

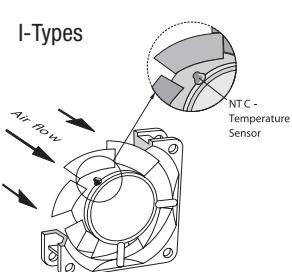

### V-Types

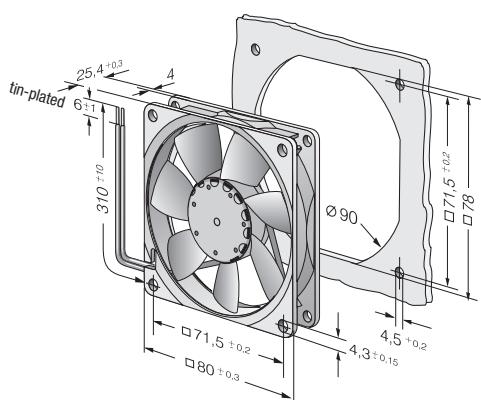

The temperature sensor for controlling the motor speed is not included in delivery.

Temperature sensor LZ 370 see accessories.

### I-Types

Temperature sensor (NTC-resistor) for controlling the motor speed is positioned directly in the air flow.

max. 80 m<sup>3</sup>/h

Subject to alterations

Air performance measured as per: ISO 5801,  
Installation category A, without accidental contact.  
Noise: Total sound power level L<sub>WA</sub> ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level L<sub>PA</sub> measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement set-up and may vary depending on the installation situation. In case of any deviation to the standard setup, the values have to be checked and reviewed once installed or fitted. For detailed information see  
<http://www.ebmpapst.com/general conditions>

max. 280 m<sup>3</sup>/h

measured on half-sphere of 2 m;  
Sound pressure level  $L_P$  A measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement  
set-up and may vary depending on the installation situation.  
In case of any deviation to the standard setup, the values have  
to be checked and reviewed once installed or fitted.  
For detailed information see  
<http://www.ebmpapst.com/general conditions>

Rotor protrusion max. 0.4 mm.

- **Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
- **Direction of air flow:** Exhaust over struts
- **Direction of rotation:** Clockwise, seen on rotor
- **Connection:** Via single wires AWG 22, TR 64
- **Highlights:** Ball bearings and sleeve bearings available
- **Mass:** 220 g
- **Possible special versions:**  
(See chapter DC fans - specials)
  - Speed signal
  - Go- / NoGo-alarm
  - Alarm with limit speed
  - External temperature sensor
  - Internal temperature sensor
  - PWM control input
  - Analog control input
  - Humidity protection
  - Salt fog protection
  - Degree of protection: IP 54 / IP 68

1) Fibreglass-reinforced plastic

max. 170 m<sup>3</sup>/h

## DC axial fans

119 x 32 mm

- **Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
  - **Direction of air flow:** Exhaust over struts
  - **Direction of rotation:** Clockwise, seen on rotor
  - **Connection:** Via single wires AWG 22,  
TR 64
  - **Highlights:** Speed automatically adjusted  
to cooling requirement
  - **Mass:** 220 g

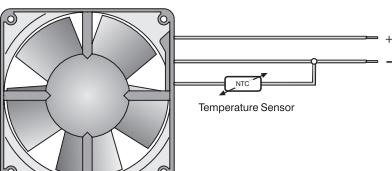

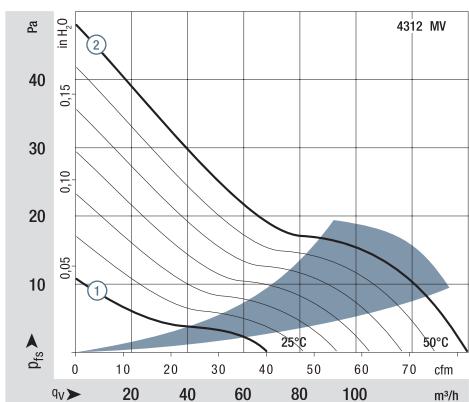

- Possible special versions:  
(See chapter DC fans - specials)
    - Speed signal
    - Go- / NoGo-alarm
    - Alarm with limit speed
    - External temperature sensor
    - Internal temperature sensor
    - PWM control input
    - Analog control input
    - Humidity protection

Subject to alterations

\* Input power at free air flow, these values can be significantly higher in the operating point.

Air performance measured as per: ISO 5801,  
Installation category A, without accidental contact.  
Noise: Total sound power level L<sub>WA</sub> ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level L<sub>PA</sub> measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement  
set-up and may vary depending on the installation situation.  
In case of any deviation to the standard setup, the values have  
to be checked and reviewed once installed or fitted.  
For detailed information see  
<http://www.ebmpapst.com/general conditions>

max. 340 m<sup>3</sup>/h

## DC axial fans

□ 127 x 38 mm

- **Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
- **Direction of air flow:** Exhaust over struts
- **Direction of rotation:** Counter-clockwise, seen on rotor
- **Connection:** Via single wires AWG 22, TR 64
- **Mass:** 310 g

- **Possible special versions:**  
(See chapter DC fans - specials)
  - Speed signal
  - Go-/NoGo-alarm
  - Alarm with limit speed
  - External temperature sensor
  - Internal temperature sensor
  - PWM control input
  - Analog control input
  - Humidity protection
  - Salt fog protection
  - Degree of protection: IP 54 / IP 68

\* Variants with an extended voltage range available to deliver on request.

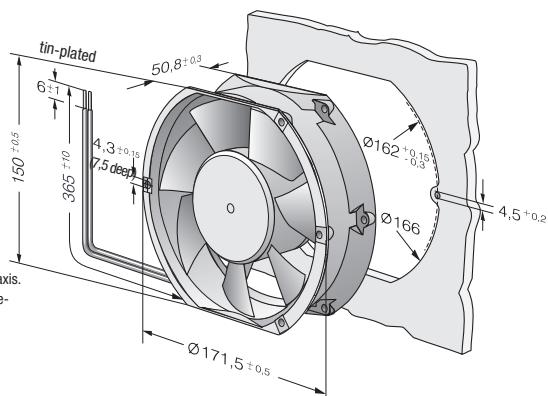

Models 6424 TD..., 6448 TD... and 6448 TDHH... are available in customer-specific, custom-developed variants only. The data specified here is technically feasible benchmark values. The fans can be specially adapted to your application with signal outputs and control inputs.

For details of the technical possibilities, refer to the chapters on the sensor signal, alarm signal and control inputs beginning on page 165.

\*\* Input power at free air flow, these values can be significantly higher in the operating point.

Air performance measured as per: ISO 5801, Installation category A, without accidental contact.  
Noise: Total sound power level  $L_{WA}$  ISO 103002 measured on half-sphere of 2 m;  
Sound pressure level  $L_p$  measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement set-up and may vary depending on the installation situation. In case of any deviation to the standard setup, the values have to be checked and reviewed once installed or fitted. For detailed information see <http://www.ebm-papst.com/general-conditions>

### Possible special versions:

(See chapter DC fans - specials)

- Speed signal
- Go- / NoGo-alarm
- Alarm with limit speed
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Humidity protection
- Salt fog protection
- Degree of protection: IP 54
- Reversible direction of rotation

max. 530 m<sup>3</sup>/h

Subject to alterations

Speed control range from 1000 rpm up to maximum speed. Standstill at 0 % PWM / 0 V,  
Type O: standstill if control wire is interrupted; Type P: maximum speed if control wire is interrupted.  
\* Input power at free air flow, these values can be significantly higher in the operating point.

Air performance measured as per: ISO 5801,  
Installation category A, without accidental contact.  
Noise: Total sound power level L<sub>WA</sub> ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level L<sub>PA</sub> measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement  
set-up and may vary depending on the installation situation.  
In case of any deviation to the standard setup, the values have to  
be checked and reviewed once installed or fitted.  
For detailed information see

## Technical information

### Product line

Our centrifugal product line includes fans for every application. Whether as free-running impellers with a diameter between 97 mm and 225 mm or as assemblies in a ready-to-install, compact housing with inlet nozzle with an edge length between 51 mm and 270 mm. Of course, all models feature highly efficient, brushless motor technology.

### Electronic protection against reverse polarity

ebm-papst DC fans have electronically commutated drives with electronic protection against reverse polarity. The electronics are conveniently located in the fan hub.

### Product life expectancy

A distinctive feature of DC fan technology is the convincing high product life expectancy. Thanks to the excellent efficiency of the brushless drives, the thermal load of the bearings is reduced, thus considerably increasing the life expectancy of the fans.

### Degree of protection

DC fans with sleeve and ball bearings are powered by class E insulated motors. All ebm-papst fans conform to the requirements of degree of protection IP 20. Fans conforming to IP 54 / IP 68 and special degrees of protection are also available.

### Voltage range

Many of our DC fans can be operated on voltages that are up to 50% lower and 25% higher than their nominal voltage (see Voltage range in the technical tables). This enables the air performance to be adapted to the cooling requirements and allows the noise to be reduced, even if the fan does not have a control input.

### Closed-loop speed control and monitoring

Closed-loop speed control and function monitoring are becoming increasingly important in many applications. ebm-papst offers many fans in the standard design with a control input and open collector speed signal.

### S-Force centrifugal – RadiCal

The new S-Force centrifugal fans provide peak performance among fans of this type. With air flow capacity of over 1500 m<sup>3</sup>/h and a pressure build-up of up to 1000 pascals, the highest heat flows are manageable. In addition, the models are extremely efficient due to the multi-pole, electronically commutated drive motors and can be adapted individually to every application thanks to intelligent motor features. Some models use our new, highly efficient RadiCal impellers.

Subject to alterations

— not yet available    □ Sleeve bearings  
● available            ■ Ball bearings

Please note that these special versions are not possible

for all voltages and speeds, and not in all combinations.

The special versions are designed for specific customers and projects. As a rule they are not available off the shelf and are subject to minimum volumes.

Please consult your customer support representative about the feasibility of your special variant.

### Optional special versions (see page 12)

On the catalogue pages and in the overview on page 12, we provide information about the special designs that are technically feasible in the fan series. Please note that these special versions are not possible for all voltages and speeds, and not in all combinations. The special

versions are designed for specific customers and projects and are not available off the shelf usually.

max. 24 m<sup>3</sup>/h

Subject to alterations

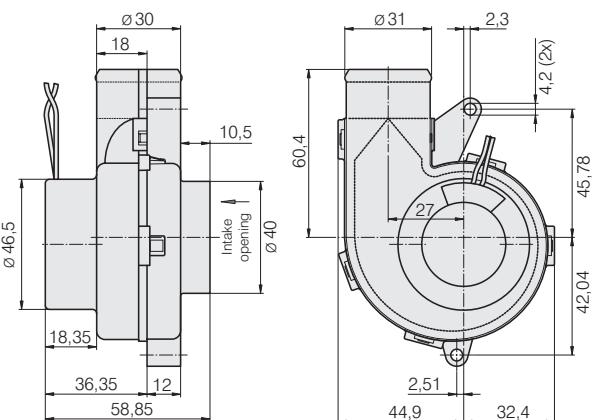

Air performance measured as per: ISO 5801,  
Installation category A, without accidental contact.

Noise: Total sound power level L<sub>WA</sub> ISO 103002 measured on half-sphere of 2 m;  
Sound pressure level L<sub>PA</sub> measured at 1 m distance to fan axis.

The acoustic values are only valid for the described measurement set-up and may vary depending on the installation situation.

In case of any deviation to the standard setup, the values have to be checked and reviewed once installed or fitted.

For detailed information see

Subject to alterations

The air flow and noise level of the centrifugal fans without external housing depend on their individual installation conditions. The stated air flow and noise level were recorded under the following measurement parameters:

Centrifugal fan mounted on a foundation plate 127 x 127 mm.  
Cover plate 127 x 127 mm, with an air inlet opening Ø 70 mm,  
arranged concentrically to the impeller.

Air performance measured as per: ISO 5801,  
Installation category A, with ebm-papst inlet nozzle without  
protection against accidental contact.  
Noise: Total sound power level  $L_{WA}$  ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level  $L_p$  A measured at 1 m distance to fan axis  
The acoustic values given are only valid for the described measure-  
ment set-up and may vary depending on the installation situation.  
In case of any deviation to the standard setup, the values have to  
be checked and reviewed once installed or fitted.  
For detailed information see  
<http://www.ebmpapst.com/general conditions>

max. 190 m<sup>3</sup>/h

Subject to alterations

Speed control range from 800 rpm up to maximum speed. Standstill at 0 % PWM.

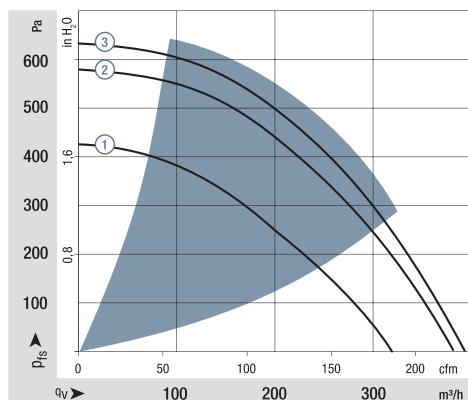

Type P: maximum speed if control wire is interrupted.

The specific service life is valid when an external capacitor is wired between the plus and minus wires.

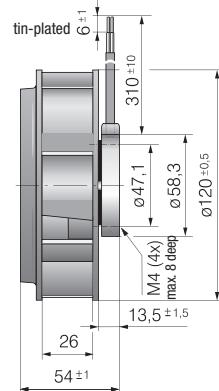

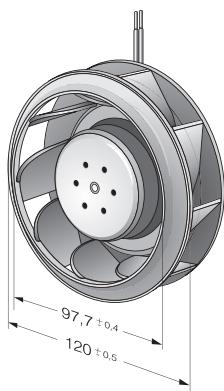

Please note the wiring suggestion.

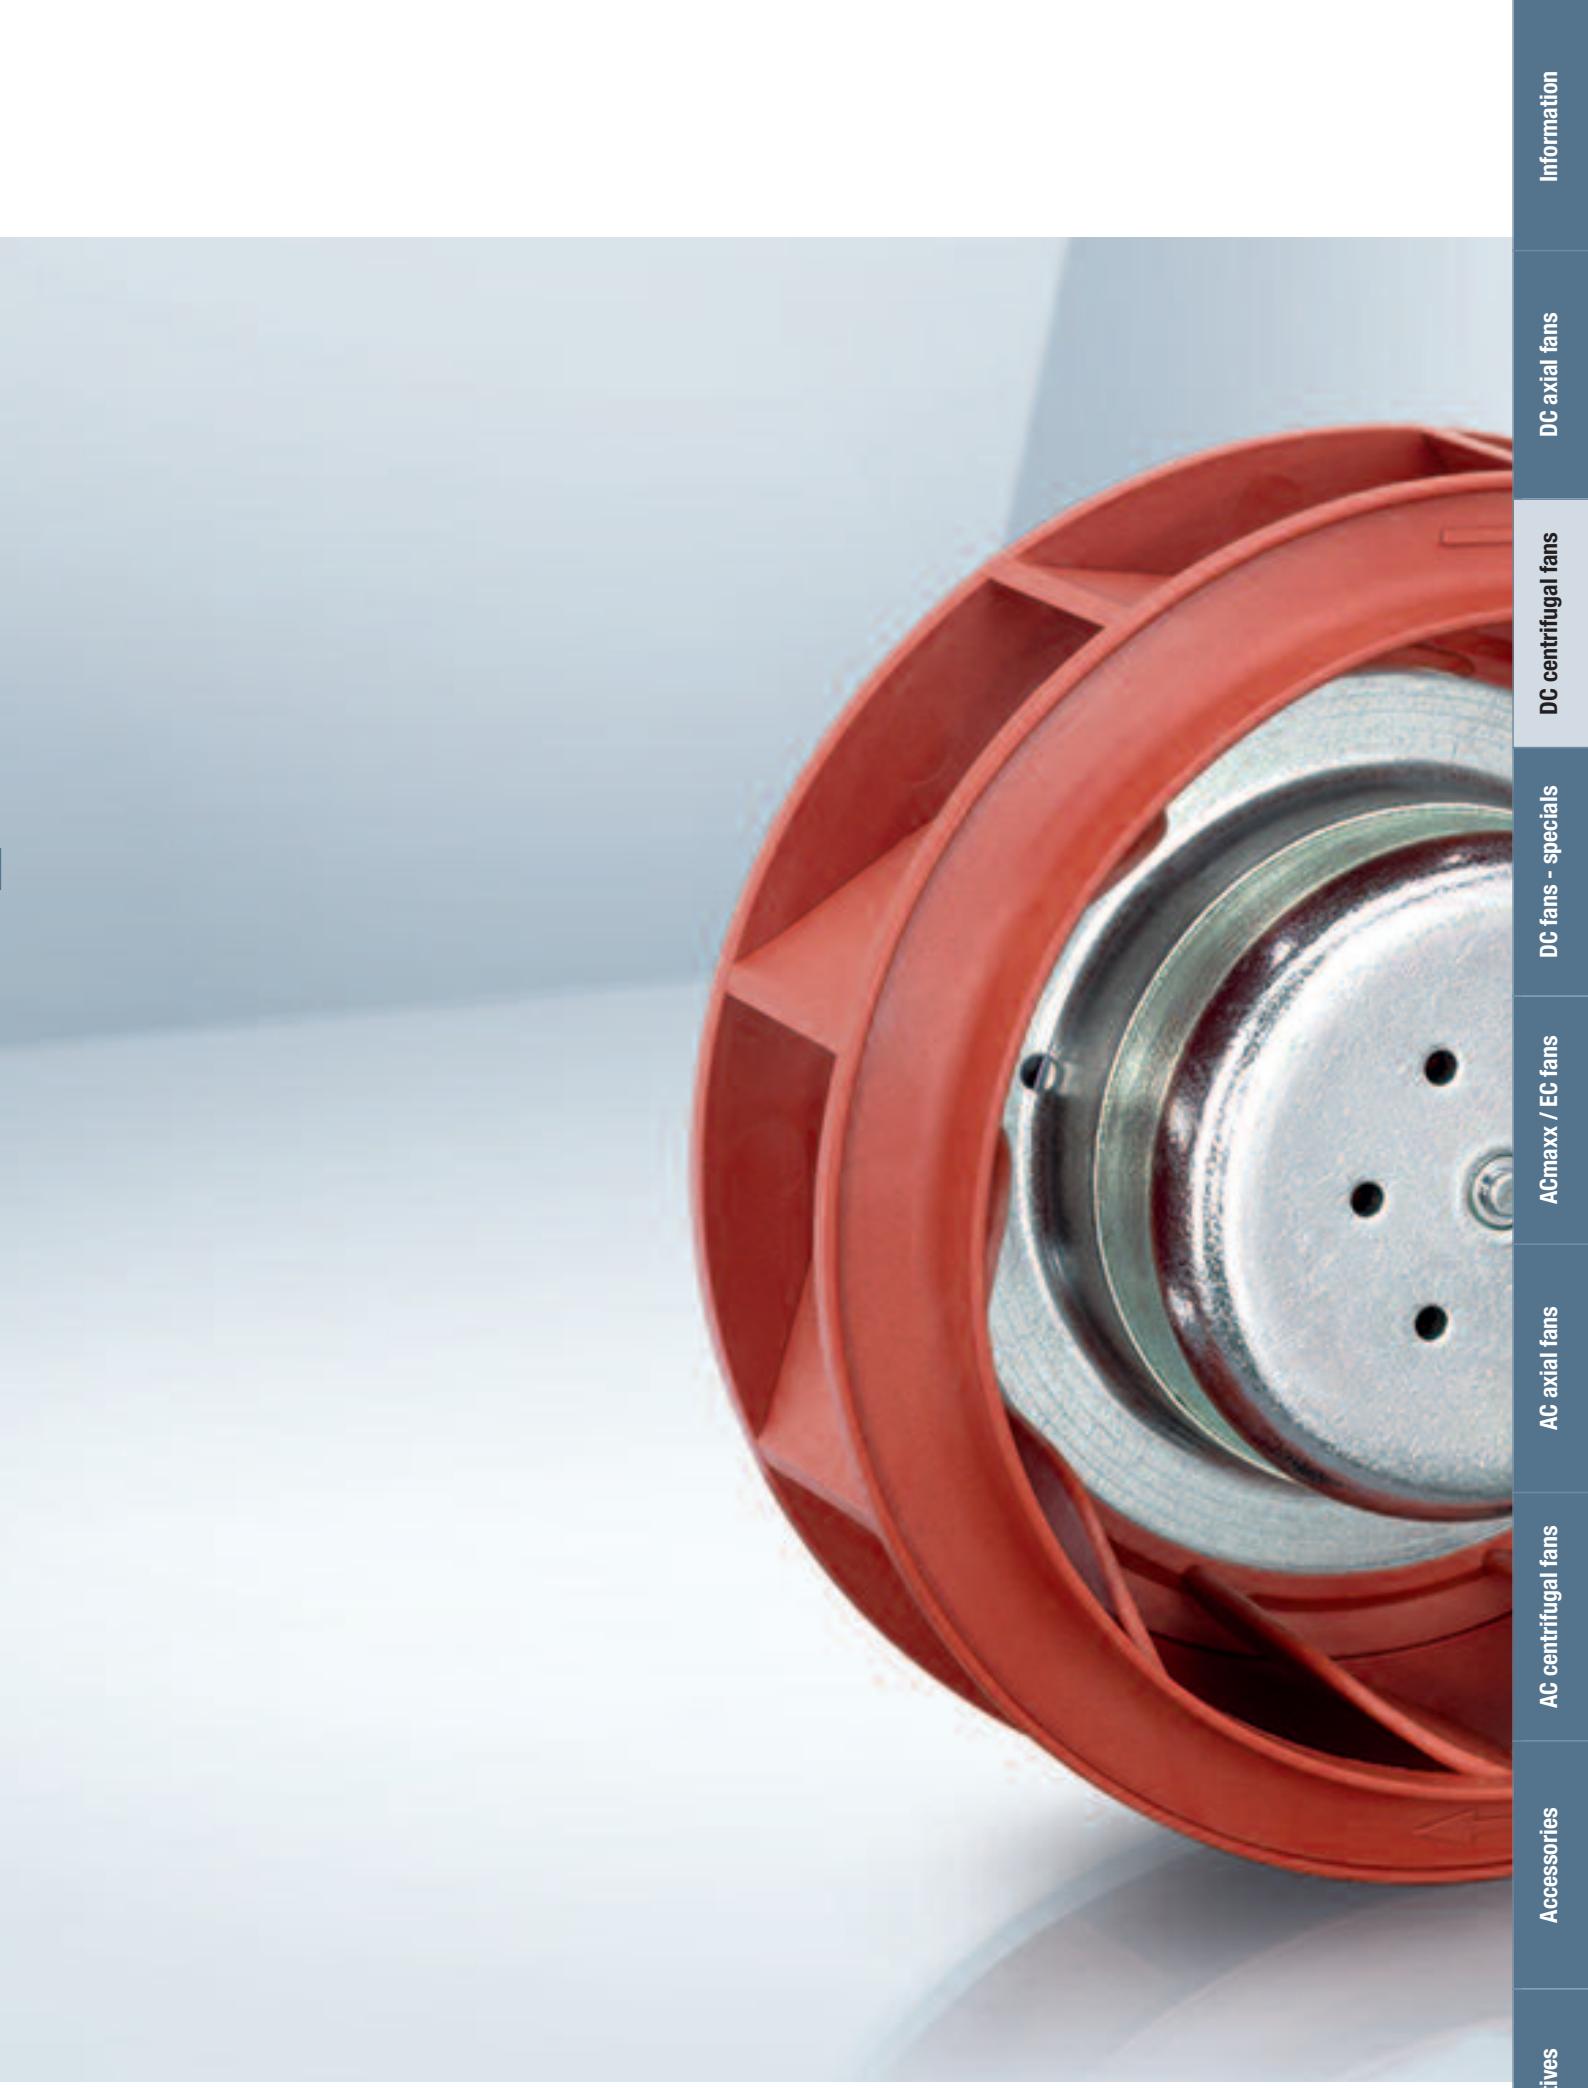

The air flow and noise level of the centrifugal fans without external housing depend on their individual installation conditions. The stated air flow and noise level were recorded under the following measurement parameters:  
Centrifugal fan mounted on a foundation plate 140 x 140 mm.  
Cover plate 140 x 140 mm, with an air inlet opening Ø 94,4 mm,  
arranged concentrically to the fan impeller.

Air performance measured as per: ISO 5801,  
Installation category A, with ebm-papst inlet nozzle without  
protection against accidental contact.  
Noise: Total sound power level L<sub>WA</sub> ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level L<sub>PA</sub> measured at 1 m distance to fan axis.  
The acoustic values given are only valid for the described measurement  
set-up and may vary depending on the installation situation.  
In case of any deviation to the standard setup, the values have to be  
checked and reviewed once installed or fitted.  
For detailed information see

The air flow and noise level of the centrifugal fans without external housing depend on their individual installation conditions. The stated air flow and noise level were recorded under the following measurement parameters:  
Centrifugal fan mounted on a foundation plate 195 x 195 mm.  
Cover plate 195 x 195 mm, with an air inlet opening Ø 125,5 mm,  
arranged concentrically to the impeller.

Air performance measured as per: ISO 5801,  
Installation category A, with ebm-papst inlet nozzle  
without protection against accidental contact.  
Noise: Total sound power level L<sub>WA</sub> ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level L<sub>PA</sub> measured at 1 m distance  
to fan axis.  
The acoustic values given are only valid for the  
described measurement set-up and may vary  
depending on the installation situation.  
In case of any deviation to the standard setup, the  
values have to be checked and reviewed once installed or fitted.  
For detailed information see  
<http://www.ebmpapst.com/general conditions>

## Technical information

### Cooling capacity and efficiency

Greater power density, increasing miniaturisation and extreme electronic component density are posing increased demands on the cooling capacity and efficiency of fans. The intelligent and space-saving integration of the fan in the device configuration is therefore of major importance:

- Tailor-made cooling adapted to the situation as and when required.
- Programmable cooling by defining speed profiles.
- Transparency of function thanks to complete, interactive monitoring in all operating conditions.

Standard fans in electronics cooling have proven themselves millions of times.

With a constant speed and a correspondingly high noise level, they continuously provide the air flow needed for extreme cases. These extreme situations, however, occur extremely rarely, if at all, during the operating period. An intelligent fan is needed, which adapts automatically to the currently required level of cooling.

ebm-papst provides intelligent cooling concepts which are optimally adapted to requirements. For example:

### 1. Speed adjustment via temperature sensor

ebm-papst answers with a complete range of DC fans with temperature-controlled speed adjustment via a temperature sensor, available in a variety of standard dimensions.

Installation is very simple. The control electronics receive thermal information for the speed adjustment continuously and without losses, either externally via a freely designed and positionable strand, or internally directly in the fan hub in the air flow. A range of temperature sensors can be found on page 178.

### 2. DC fans with separate control input

Open or closed-loop speed control is also possible with DC fans that have a separate control input. A variation in speed can thus be implemented via a control voltage or a pulse-width modulated signal. These possibilities are used primarily in devices that have appropriate standard interfaces and thus require a load-dependent variation of the fans.

# DC fans - specials

## Technical information

### 3. Speed signal

DC fans with speed signal.

The integrated „electronic tachometer“ continuously provides an actual speed signal for external evaluation. The user is informed at all times of the current fan speed via an extremely simple signal evaluation on the customer side. The speed signal is via a separate lead.

### 4. Alarm signal

For applications which require monitored fan operation with alarm signal, ebm-papst has numerous alarm signal versions, either a static, pre-processed or interface-compatible high or low continuous signal depending on the type of fan.

### 5. Turbo drives

Fans with three-phase EC drives and microprocessor-controlled motor electronics. These three-phase motors whose torque is virtually non-reliant on the rotor position are used for extremely high running smoothness. The speed of these fans can be controlled over a very wide range with PWM, analog voltage or temperature. Optionally, the fans can be supplied with reversible direction of rotation and active brake operation.

### 6. Vario-Pro fans

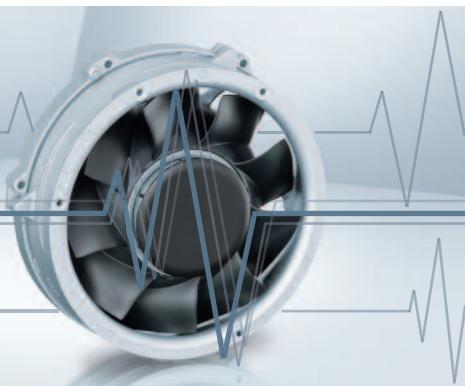

This high-end fan concept by ebm-papst with programmed intelligence and customer-specific integrated functions makes your electronics cooling even more versatile and competitive. Vario-Pro ensures a fresh economic breeze for all demanding cooling tasks – e.g. where greater reliability, more flexibility and intelligent function features such as alarm function, speed control etc. are required.

The successful concept of Vario-Pro is: Tailor-made software instead of fixed hardware, because programmed software modules for motor control and application intelligence are responsible for the work that analog components were responsible for in the past. This central control unit of the Vario-Pro comprises a microcontroller and an EEPROM, on which all characteristics are stored.

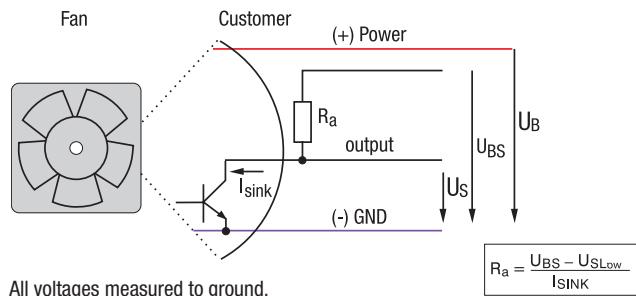

### 7. Protection against environmental influences

Some applications place particular demands on the fans resistance to ambient influences, such as dust, moisture, water and salt. ebm-papst offer solutions for adapting fans to these ambient conditions.

# Speed signal /2

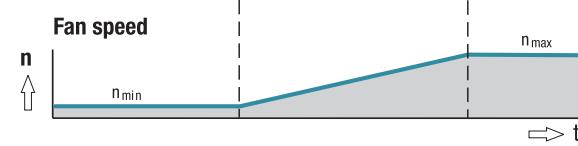

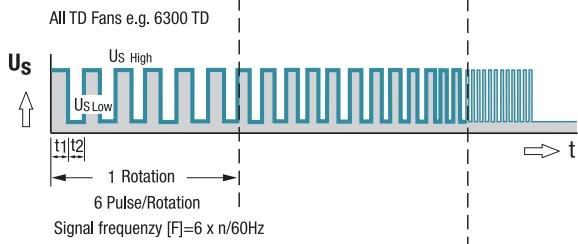

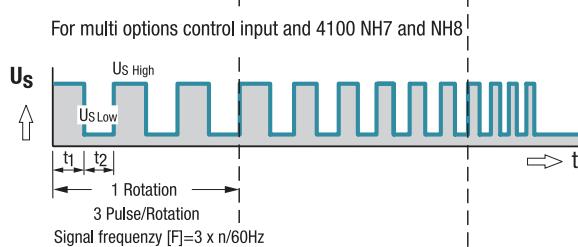

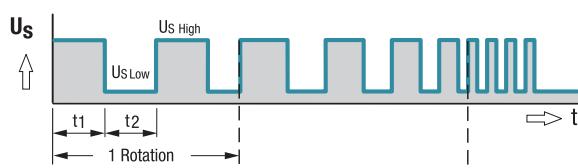

## Electrical connection

## Signal output voltage

Standard signal for all models (exceptions see below)

- Speed-proportional square-wave signal for external speed monitoring of fan motor
- 2, 3 or 6 pulses per revolution
- Open collector signal output
- Extremely wide operating voltage range
- Easy adaptation to user interface
- Connection via separate lead
- The sensor signal also serves as a major comparison variable for setting and maintaining the setpoint speed for interactive or controlled cooling with one or several interconnected fans.

Subject to alterations

**Note:**

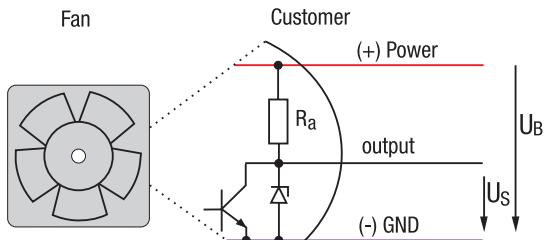

With these fan options, deviations in regard to temperature range, voltage range and power consumption are possible compared with standard fan data.

# Speed signal /12

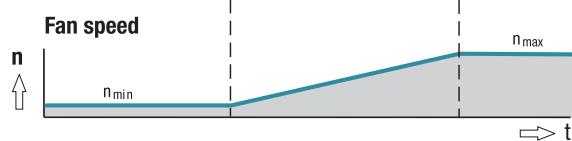

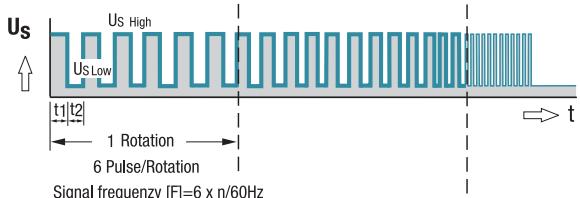

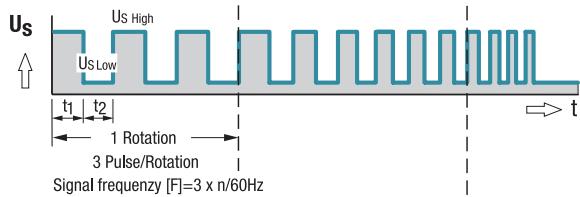

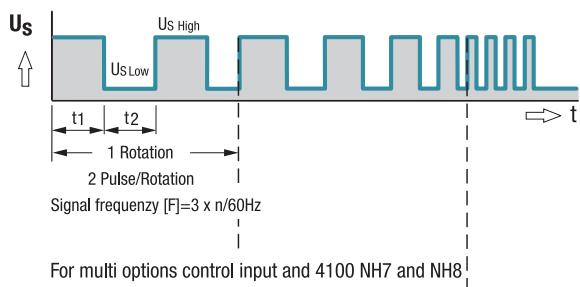

- Speed-proportional square-wave signal for external speed monitoring of fan motor
- 2, 3 or 6 pulses per revolution
- TTL-compatible
- Integrated pull-up resistor
- Connection via separate lead
- The sensor signal also serves as a major comparison variable for setting and maintaining the setpoint speed for interactive or controlled cooling with one or more interconnected fans.

## Electrical connection

## Signal output voltage

Standard signal for all models (exceptions see below)

### Electrical connection

All voltages measured to ground  
External load resistor  $R_a$  from  $U_A$  to  $U_{BA}$  required.

\* Speed limit  $n_G = 0$  rpm

- "Software instead of hardware" – aptly describes the unique fan concept, equipped at the plant with tailor-made intelligence for cooling electronics.
- Flexible configuration using software, allows quicker availability, sampling from the factory and the ability to supply customer-specific solutions in any quantity.

## Vario-Pro-Features

### External Speed setting

- Speed setting via temperature, PWM or analog control voltage  
See page 178 (Speed setting)
- Description of speed curve with up to 14 selectable interpolation points  
Linear interpolation between the points
- Zero speed possible
- Recognition of sensor failure: In case of loss of sensor, the fan operates at programmable (fail-safe) speed.

### Alarm and tachometer functions

- Optional alarm and/or tachometer function
- Selectable alarm speed limit (with hysteresis) and alarm delay time
- Latching of alarm signal
- Delay only when starting or permanently active
- "High" or "Low" output signal in case of alarm
- Optional alarm if temperature sensor fails
- Optional alarm in case of excess temperature

### Motor management

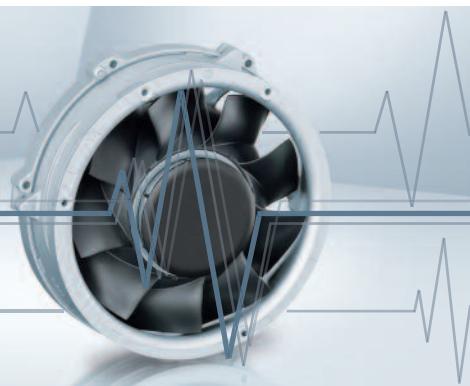

- High control accuracy due to digital motor management
- Higher operating efficiency due to optimum adaptation of motor hardware and software

# Speed setting via temperature sensor

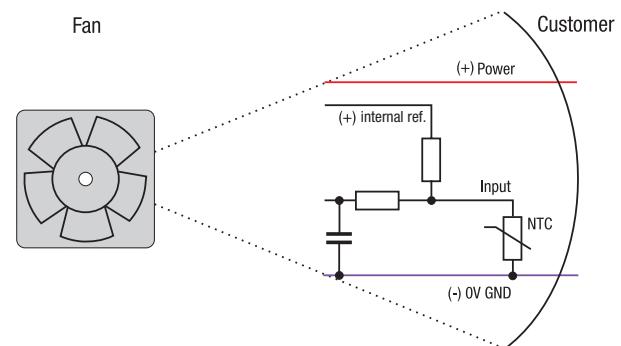

**External temperature sensor type T**

- Ext. NTC type LZ370 (p. 257) is required  
(to be ordered separately)

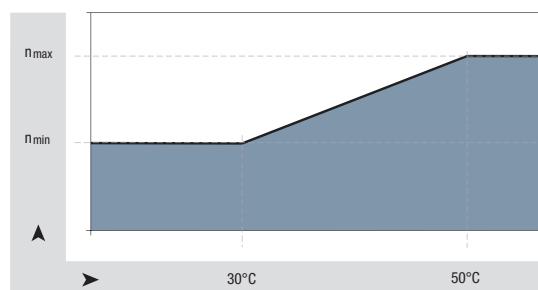

**Internal temperature sensor type I**

- NTC integrated into the fan hub

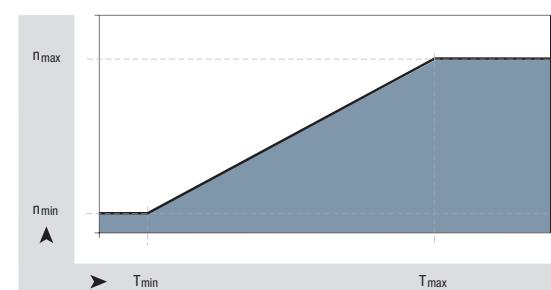

**Standard speed-temperature curve  
for type T and type I**

$$n_{\min} \approx \frac{1}{2} n_{\max}$$

$$T_{\min} \approx 30^{\circ}\text{C}; T_{\max} = 50^{\circ}\text{C}$$

**Optionally available with customer specific  
temperature-speed control curve**

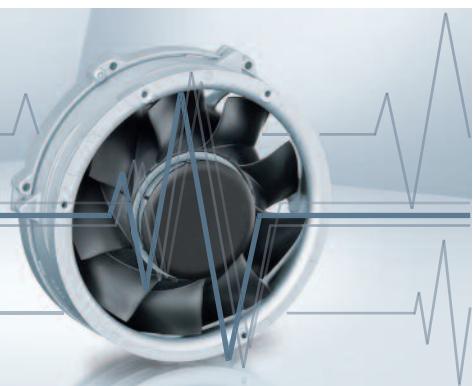

$$n_{\min} \approx 800 \text{ } 1/\text{min}$$

$$T_{\min} \approx 5^{\circ}\text{C}$$

$$n_{\max} \text{ model-dependent}$$

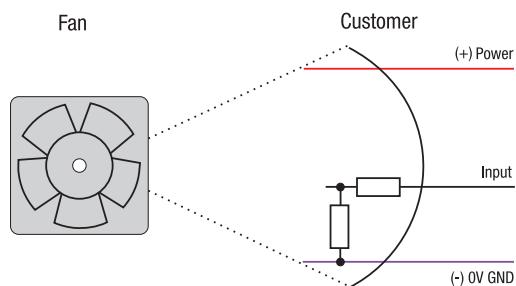

$$T_{\max} \leq 85^{\circ}\text{C, model-dependent}$$

# Speed setting with control voltage or PWM

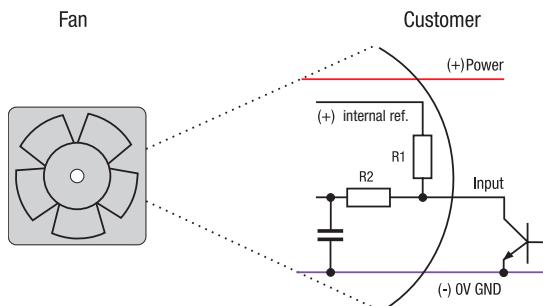

## Speed setting via analog control voltage type A

- Standard control range 0 ... 10 V

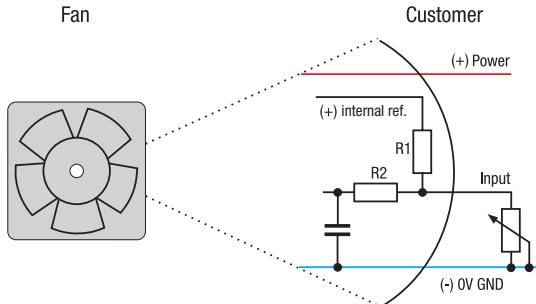

## Speed setting via PWM type P

- Standard PWM signal in two versions
  - a) PWM frequency, mainly 1–10 kHz (0–100%), Open collector input
  - b) Four-wire interface in accordance with Intel specifications for 12 VDC fans, PWM frequency 25 kHz, incl. speed signal /2

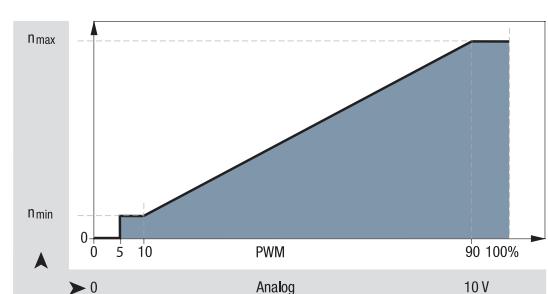

- Optional with potentiometer

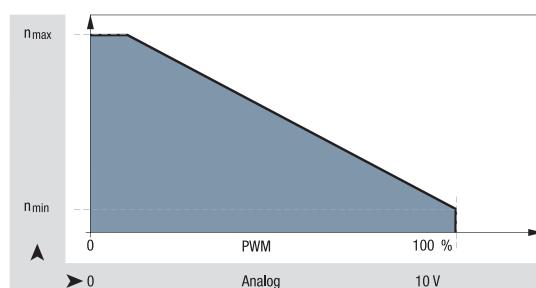

Internal reference = +5V  
R1 typical 4.7...10 kΩ  
R2 typical 100 kΩ

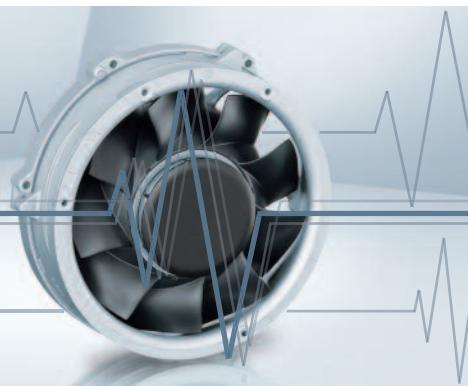

## Standard curve P / A

## Optionally available with customer specific P / A speed control curve

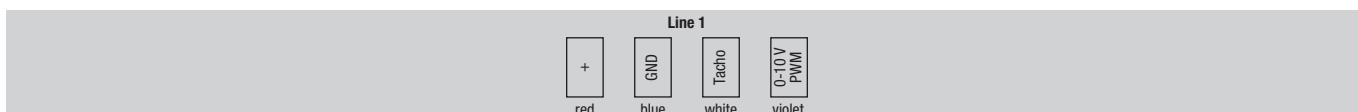

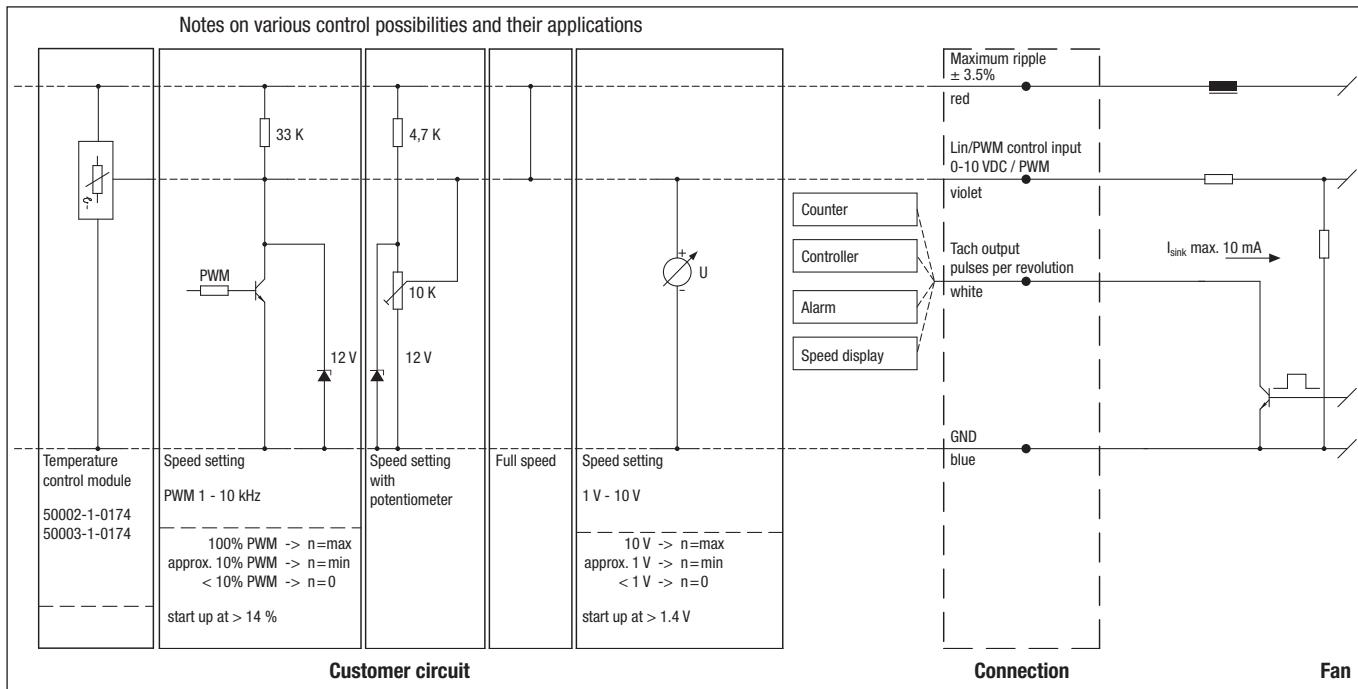

# Speed setting via multi-option control input

- Customer can operate input either with PWM signal, analog voltage, external temperature control module or resistor.
- The control signal-speed characteristics of the fan differ from the standard curve of the A and P inputs (see p. 179).
- To set up maximum speed, the control wire must be connected to  $U_B$ .
- The control input is usually combined with an open collector tachometer (Type /2, see page 168).

## Speed setting via multi-option control input type 0

Line	Connection	Colour	Assignment / function
1	+	red	Maximum ripple $\pm 3.5\%$
	GND	blue	GND

Line	Connection	Colour	Assignment / function
1	Tach	white	Tach output: 3 pulses / revolution
	0-10 V / PWM	violet	Control input (Impedance $100 \text{ k}\Omega$ )

# Protected fans

## against environmental influences

- Capable to fulfill special requirements for a broad range of applications
- Resistant to environmental influences, such as dust, splash water, humidity, spray water and salt fog
- Highly competent solutions for adapting fans to environmental conditions

### Moisture protection

Coated motor and printed circuit board protects against humidity and condensation.

### Degree of protection: IP 54 / IP 68

In the degree of protection IP 54, the motor and circuit boards are coated and therefore protected against spray water and moisture. The degree of protection IP 68 is important for ebm-papst products, as it ensures a high degree of protection for the encapsulated motor and electronic against foreign bodies and water, whilst protecting the user against potential hazards upon contact. Degree of protections higher than IP 68 are possible upon request.

The available solutions could be different depending on the fan size. We would be glad to develop solutions tailored to the demands of your application.

### Salt fog protection

Salt fog is extremely demanding on the resistance of the product. ebm-papst makes use of technologies that protect fans and blowers from salt fog reliably and durably.

### Stainless steel bearings

Special bearings made of stainless steel provide additional protection.

### Degree of protection – IP code\*

Protection against foreign bodies and accidental contact (first digit)		Water protection (second digit)	
X	No protection	X	No protection
1	Protection against foreign bodies > 50 mm (back of the hand)	1	Protection against dripping water or condensation
2	Protection against foreign bodies > 12 mm (finger)	2	Protection against dripping water, fans tilted 15° from vertical
3	Protection against foreign bodies > 2,5 mm (tool)	3	Protection against water spray up to 60° from vertical
4	Protection against foreign bodies > 1 mm (wire)	4	Protection against water spray from all sides
5	Protection against dust in harmful quantities	5	Protection against low-pressure water jets
6	Dust-proof	6	Protection against high-pressure water jets
		7	Protection against temporary submersion (15 cm - 1 m)
		8	Protection against continuous submersion

\* IP = International degree of protection marking

# ACmaxx / EC fans

**Technical information  
about ACmaxx / GreenTech EC-compact fans**

## Progress made by ebm-papst

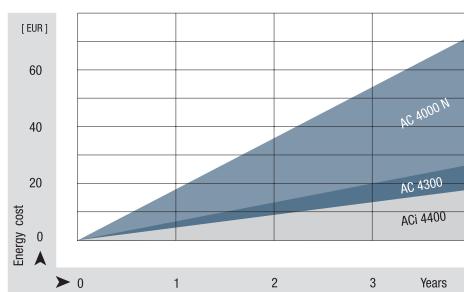

The best example: The ACmaxx fans from ebm-papst, which, thanks to an ingenious yet simple improvement over conventional AC fans, provide substantial benefits.

The aim in developing the new ACmaxx series was to raise the technology standard of the conventional AC fan significantly and, in the process, facilitate the transition to the new technology by retaining the overall mounting dimensions. In short, to ensure the fans can be replaced 1:1 without any peripheral changes or changes to the voltage situation. ebm-papst offers two generations of ACmaxx products that meet different needs.

## What ACmaxx and GreenTech EC-compact fan have in common:

### Energy efficiency

The drive concept is based on state-of-the-art GreenTech EC technology with outstanding motor efficiency. Compared to AC fans of the same size, ACmaxx energy consumption is up to 77% lower—for higher cooling capacity! Just the energy savings means that the products pay for themselves after only a few months. The savings over the entire service life, especially in systems with multiple fans, is considerable.

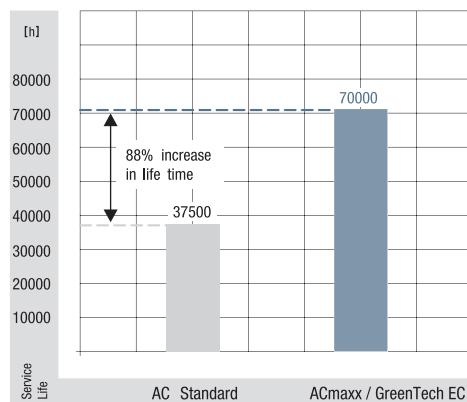

## Independent of mains frequency and mains voltage

The ACmaxx and GreenTech EC-compact fans are prepared for direct connection to wide ranges of AC voltages and frequencies. The speed, and thus

important properties of the fan such as air flow and noise, are independent of the power frequency and do not change, even within the defined voltage range. Voltage fluctuations in the power system are automatically compensated for.

## Long service life

The efficiency of ACmaxx and GreenTech EC-compact fan motors is up to 75% higher than that of conventional AC fan variants. This not only saves energy, it also means less self-heating in the motor. The reduced heating has a direct, positive effect on the bearing system, which is why the fans have a service life that is up to 85% longer! This also extends the service and maintenance intervals significantly. The expense of replacement fans, and even more expensive downtimes, are kept to a manageable minimum.

# ACmaxx / EC fans

**Technical information  
about ACmaxx / GreenTech EC-compact fans**

## Safety

- Safety certifications: UL, CSA and VDE 0805 / EN60950. VDE 0700 / EN60335 on request.
- Our fans have the CE mark of conformity.
- EMC protection:
  - > EN61000-4-4 Level 1 (1 kV or 2 kV)B
  - > EN61000-4-2 Level 8 kV/15 kV or 4 kV/8 kV
  - > EN61000-4-3
  - > EN61000-4-6
  - > EN61000-4-8
  - > EN55022 Class B

## Ambient influences

AC fans are extremely common and are used in a wide variety of applications. In control cabinet cooling, beer coolers, cooling cabinets, wood-burning stoves, medical devices – all have different requirements for resistance to ambient influences. ACmaxx and GreenTech EC-compact fans offer the same features for Humidity protection, splash water and rough ambient conditions.

## Particular design features of the GreenTech EC-compact fan (ACi 4400):

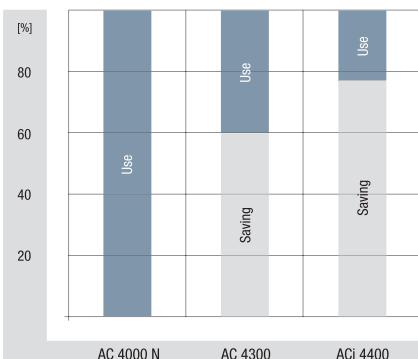

### GreenTech EC-compact fan is more compact!

As large as existing AC fans – and not a bit larger. This is the most outstanding feature of the new GreenTech EC-compact fans ACi 4400. Even in the hub area, the fan does not differ from typical 119 x 119 x 38 mm AC fans. Out with the AC, in with the GreenTech EC-compact fans ACi 4400 – it's that simple.

### GreenTech EC-compact fan is more efficient!

ACmaxx saves energy, and the GreenTech EC-compact fan generation saves even more. While an AC fan at 50 Hz can barely reach an overall efficiency of 5-6%, the ACmaxx makes it to approx. 20-25%. With the new GreenTech EC-compact fans ACi 4400, a remarkable level of up to 30% is reached. This is the result of the optimisation of the entire package made up of drive, electronics, AC/DC conversion and aerodynamics. Thus the new GreenTech EC-compact fans series boasts energy savings of almost 75% compared to the corresponding AC fan, thus providing significantly higher savings than the 40% level of the old AC 4300 generation.

### GreenTech EC-compact fan is quieter!

The GreenTech EC-compact fan ACi 4400 is quieter! Quieter than AC fans and quieter than the existing ACmaxx generation. The reason for this are the optimised aerodynamics and the drive, which is optimised for minimum structure-borne noise. Thus the fan is only half as loud at comparable air performance, and is up to 6 dB(A) quieter at some operating points.

### Speed independent of voltage and frequency

For the GreenTech EC-compact fans ACi 4400, the speed, and thus the air flow and operating noise, are independent of the supply voltage and power frequency.

Versions are available for 115 VAC with a voltage range from 85 to 132 VAC and 230 VAC with a voltage range of 195 to 265 VAC. Voltage fluctuations and frequency differences in the power system are compensated for automatically.

# ACmaxx / EC fans

**Technical information  
about ACmaxx / GreenTech EC-compact fans**

## Particular design features of the ACmaxx:

### Prepared for all common AC voltages

These types have a very wide voltage range from 85 to 265 VAC – the global voltage range, so to speak. This enables the fan to be used around the world, opening up large savings potentials. In addition to reduced logistics effort and stock-keeping, worldwide availability is key. ACmaxx is compatible with every supply voltage – no switching needed. From 85 to 265 volts and mains frequencies of 50 and 60 hertz. Voltage fluctuations in the power system are automatically compensated for.

### Higher performance

Unlike conventional AC technology, the state-of-the-art drive concept of this fan series is not linked to a fixed power frequency. This allows the motor speed to be increased over a wide range. Thus ACmaxx provides significantly higher air flow and significantly increased pressure.

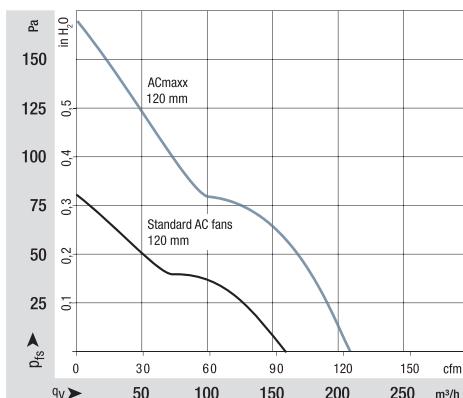

### Higher flexibility

The flexibility of ACmaxx is one-of-a-kind. With its intelligent features, ACmaxx can be individually adapted to the specific application: standby mode, overload mode at peak times or night reduction all the way to temperature-controlled quiet operation are all possible. From speed

setting to long-term function checks using an alarm or speed signal outputs, ACmaxx offers optional interfaces that allow you to monitor operation quickly and easily.

You can find further information about these fan options in the "Specialised fans" chapter, starting on page 161.

Or you can simply contact our application engineers to discuss your ideal ACmaxx or GreenTech EC-compact fan.

# ACmaxx in-line duct fan

Ø 98,5 x 130 mm

Series AC 100

- **Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
- **Direction of air flow:** Intake over struts
- **Direction of rotation:** Clockwise, seen on rotor
- **Connection:** Via 3-pin terminal strip Europa max. 1,5 mm<sup>2</sup>
- **Highlights:** Universally usable for all main voltages between 85 and 265 VAC, 50-60 Hz, Boost function  
Vibration-isolated motor  
Optional: new impeller for high pressure  
Two speeds over jumper adjustable
- **Mass:** 400 g

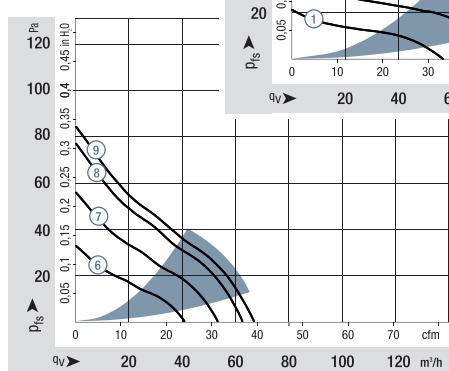

- **Possible special versions:**  
(See chapter DC fans - specials)
  - Speed signal
  - PWM control input
  - Analog control input 0...10 VDC
  - Humidity protection
  - Degree of protection: IP 44 (IP 45 possible depending on mounting position)

1) Fibreglass-reinforced plastic

## Technical information

### Product line

The renowned ebm-papst AC fans are used when DC voltage is not available. The AC range of fans is based on experience gained from decades of development activity, millions of units in series production and competence in innovation of a world-wide technological leader.

A wide range of fans for AC operation is presented in this catalogue. In addition to complete device fans, you will also find fans without external housing, providing a particularly economical advantage when the air duct can be integrated in the respective device.

### Variety of sizes

AC fans are available in a variety of sizes with either air exhaust or air intake over struts. Silent running models with sleeve bearings. Electrical connection with plug connection or external leads are available.

### Shaded-pole or capacitor motors

Fan drives by shaded-pole or capacitor motors, most of which incorporate the world-famous ebm-papst external rotor principle: The fan blades are directly attached to the external rotor of the external rotor motor, thus combining both high performance and profitability.

### Flat built AC fans

ebm-papst also has particularly flat built AC fans with internal rotor motor. Their advantage: quick start to full speed. A plastic impeller and the both smaller and lighter internal rotor motor lead to a lower moment of inertia.

### Bearings

AC fans with sleeve bearings are powered by Class E insulated motors. Fans with ball bearings are equipped with Class B, E or F insulated motors.

### Degree of protection

All fans are equipped with degree of protection IP 20 as standard. IP 54 / IP 68 and further degrees of protection are available on request.

### AC voltage

The line of AC fans for Euro voltage according to IEC 60038 (230 V + 6 %, -10 %) is basically also available for 115 V.

### Frequencies

AC fans can be operated at frequencies of 50 Hz or 60 Hz. However, their technical data then changes accordingly.

### Capacitor

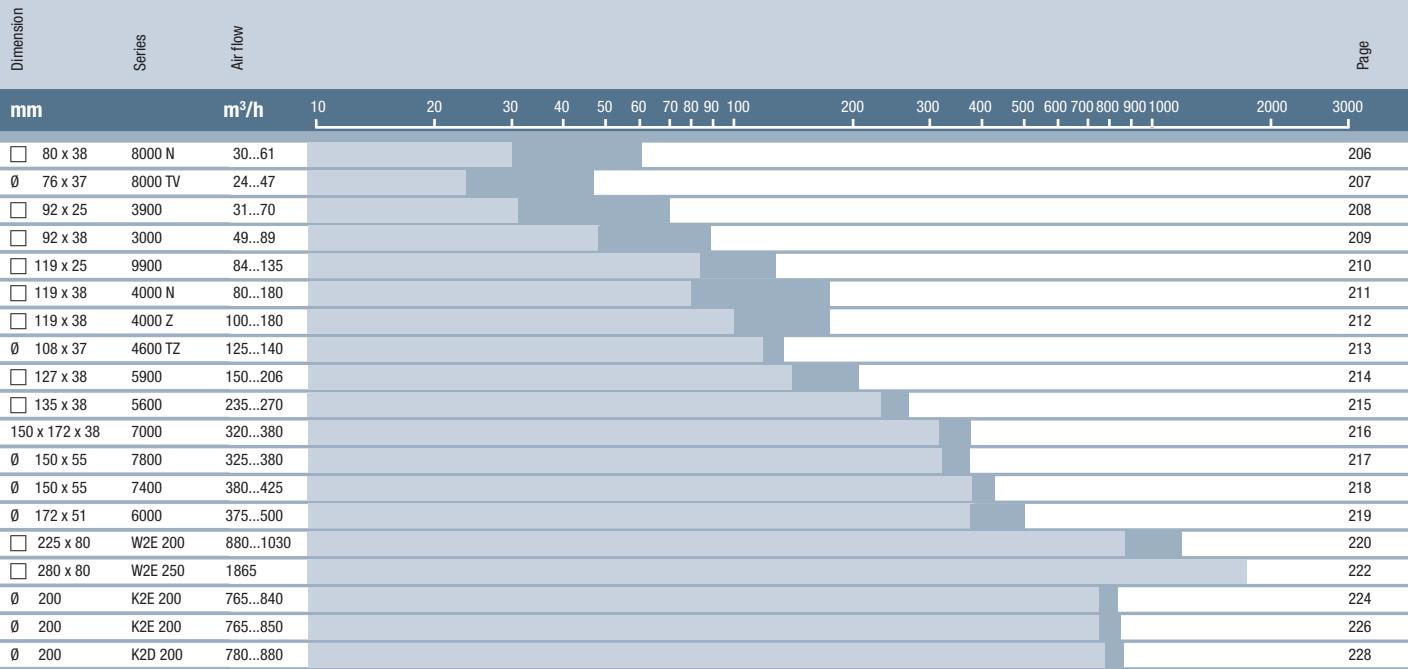

Fans driven by capacitor external motors provide particularly high operating efficiency. Generally, the required operating capacitor is already integrated in the fan housing.

### Overloading

Almost all AC fans are protected against overloading (e.g. due to locked rotor) the drive motors are either impedance protected (marked "Impedance protected", and/or "Z.P.") or are equipped with a thermal switch (marked "Thermally protected" or "Th.P."). The model designation of these fans ends with "S".

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise has been measured with an orifice 76.5 mm Ø at a distance of approx. 17 mm from the mounting bracket. Under exceptionally favourable mounting conditions, the air flow of fan series 8000 N is achievable. The noise in the optimal operating range can only be measured for these fans in a specific application.

Subject to alterations

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise has been measured with an orifice 109 mm Ø at a distance of approx. 17 mm from the mounting bracket. Under exceptionally favourable mounting conditions, the air flow of fan series 4000 Z is achievable. The noise in the optimal operating range can only be measured for these fans in a specific application.

Fan type	Lead wires
4650 TZ	4600 TZ
4656 TZ	AWG 22, TR 32

# AC centrifugal fans

## Technical information

### Product line

The renowned ebm-papst AC fans are used when DC voltage is not available. The AC range of fans is based on experience gained from decades of development activity, millions of units in series production and competence in innovation of a world-wide technological leader.

A wide range of fans for AC operation is presented in this catalogue. In addition to complete device fans, you will also find fans without external housing, providing a particularly economical advantage when the air duct can be integrated in the respective device.

### Variety of sizes

AC fans are available in a variety of sizes with either air exhaust or air intake over struts. Silent running models with sleeve bearings. Electrical connection with plug connection or external leads are available.

### Shaded-pole or capacitor motors

Fan drives by shaded-pole or capacitor motors, most of which incorporate the world-famous ebm-papst external rotor principle: The fan blades are directly attached to the external rotor of the external rotor motor, thus combining both high performance and profitability.

### Flat built AC fans

ebm-papst also has particularly flat built AC fans with internal rotor motor. Their advantage: quick start to full speed. A plastic impeller and the both smaller and lighter internal rotor motor lead to a lower moment of inertia.

### Bearings

AC fans with sleeve bearings are powered by Class E insulated motors. Fans with ball bearings are equipped with Class B, E or F insulated motors.

### Degree of protection

All ebm-papst fans conform to the requirements of IP 20. Fans conforming to IP 54 / IP 68 and special degrees of protection are also available.

### AC voltage

The line of AC fans for Euro voltage according to IEC 60038 (230 V ± 10 %) is basically also available for 115 V.

### Frequencies

AC fans can be operated at frequencies of 50 Hz or 60 Hz. However, their technical data then change accordingly.

### Capacitor

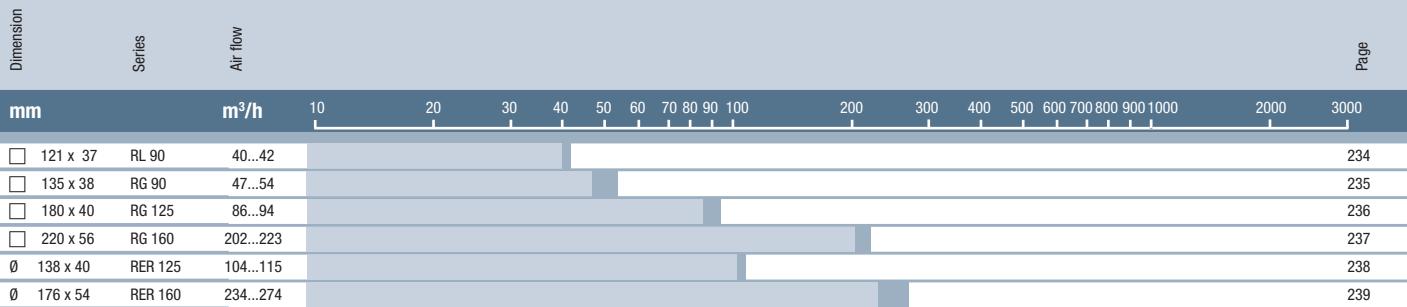

Fans driven by capacitor external motors provide particularly high operating efficiency. Generally, the required operating capacitor is already integrated in the fan housing.

### Overloading

Almost all AC fans are protected against overloading (e.g. due to locked rotor) the drive motors are either impedance protected (marked "Impedance protected", and/or "Z.P.") or are equipped with a thermal switch (marked "Thermally protected" or "Th.P."). The model designation of these fans ends with "S".

Subject to alterations

Air performance measured as per: ISO 5801,  
Installation category A, without accidental contact.  
Noise: Total sound power level L<sub>WA</sub> ISO 103002  
measured on half-sphere of 2 m;  
Sound pressure level L<sub>A</sub> measured at 1 m distance to fan axis.  
The acoustic values are only valid for the described measurement set-up and may vary depending on the installation situation. In case of any deviation to the standard setup, the values have to be checked and reviewed once installed or fitted. For detailed information see  
<http://www.ebmpapst.com/general conditions>

max. 115 m<sup>3</sup>/h

# AC centrifugal fans

Ø 138 x 40 mm

- **Material:** Spiral housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)  
with steel plate reinforced
- **Direction of air flow:** centrifugal
- **Direction of rotation:** clockwise, seen on rotor
- **Connection:** Via 2 single wires AWG 22
- **Highlights:** backwards-curved impeller
- **Mass:** 500 g

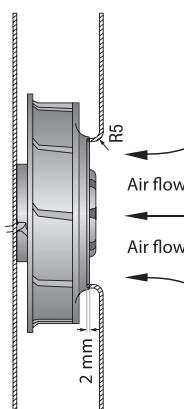

- **Possible special versions:**  
(See page 12)
  - Humidity protection
  - Salt fog protection
  - Degree of protection: IP 54

1) Fibreglass-reinforced plastic

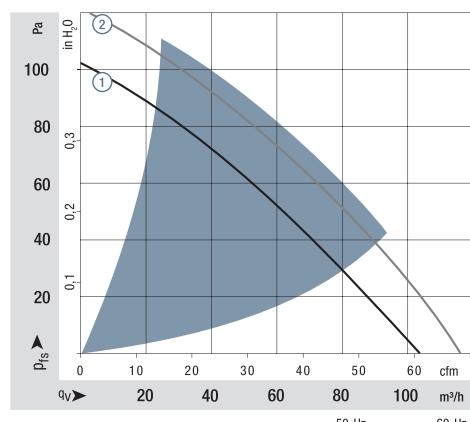

Series RER 125

Subject to alterations

The air flow and noise level of fans without external housing depend on the installation conditions. The stated air flow and noise levels have been measured under the following conditions:  
Centrifugal fan mounted on a base plate 220 x 220 mm.  
Cover plate 220 x 220 mm with an air inlet of Ø 86 mm, concentric to the impeller.

Air performance measured as per: ISO 5801,  
Installation category A, with ebm-papst inlet nozzle without  
protection against accidental contact.  
Noise: Total sound power level L<sub>pA</sub> ISO 103002 measured on  
half-sphere of 2 m;  
Sound pressure level L<sub>pA</sub> measured at 1 m distance to fan axis.  
The acoustic values given are only valid for the described  
measurement set-up and may vary depending on the  
installation situation.  
In case of any deviation to the standard setup, the values have  
to be checked and reviewed once installed or fitted.  
For detailed information see  
<http://www.ebmpapst.com/general-conditions>

max. 274 m<sup>3</sup>/h

## AC centrifugal fans

Subject to alterations

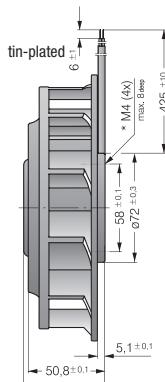

The air flow and noise level of fans without external housing depend on the installation conditions. The stated air flow and noise levels have been measured under the following conditions:

Centrifugal fan mounted on a base plate 260 x 260 mm.  
Cover plate 260 x 260 mm with an air inlet of Ø 100 mm, concentric to the impeller.

Air performance measured as per: ISO 5801,  
Installation category A, with ebm-papst inlet nozzle without  
protection against accidental contact.  
Noise: Total sound power level L<sub>pA</sub> ISO 103002 measured on  
half-sphere of 2 m;  
Sound pressure level L<sub>pA</sub> measured at 1 m distance to fan axis.  
The acoustic values given are only valid for the described  
measurement set-up and may vary depending on the  
installation situation.  
In case of any deviation to the standard setup, the values have  
to be checked and reviewed once installed or fitted.

# Accessories

Guard grilles	242
Fan filter guard grilles	250
Inlet nozzles	252
Connection cables / Accessories	255
Electrical connections	258

Everything that you need for your fan. ebm-papst provides an extensive range of accessories for optimum fan operation: From temperature sensing for speed-controlled fans to finger guards of all types, connecting cable, filter, screens, spacers and assembly parts. In addition to the accessories and assembly parts listed in this catalogue, ebm-papst also supplies numerous special parts for fan operation. The sales experts at ebm-papst will be happy to assist you in your enquiries concerning fan assembly and application.

From selection to accessories: Insist on the efficient and reliable service provided by ebm-papst.

# Guard grilles

- **Material:** Zinc-plated or nickel-plated steel wire
  - **Note:** Guard grille in line with DIN EN ISO 13857 (previously EN 294). Additional guard grilles that do not meet DIN EN ISO 13857 can be delivered on request.
- Our guard grilles are designed specifically for use with ebm-papst fans. They combine the highest degree of safety with minimum effect on operating noise. Please note that safety-relevant clearances cannot be guaranteed when using guard grilles from other manufacturers.

# Fan filter guard grilles

- Material:** Grille cover: polycarbonate (PC) with matt finish  
Mounting plate: wire mesh with black powder coating  
Filter pad: white, synthetically joined fibres

- Note:**

Filter guard grille suitable for fitting on axial fan ranges in the following dimensions:  
60 mm, 80 mm, 92 mm, 119 mm, ø 172 mm. All filter units fit directly on the mounting holes on the fans.

Filter guard grille consisting of 3 parts: outer grille cover, inner mounting plate and replaceable filter pad.

The filter pad can be replaced quickly and easily via a quick release on the grille cover. The filter pads can be replaced even while the fan is running, as protection is provided by the welded wire mesh.

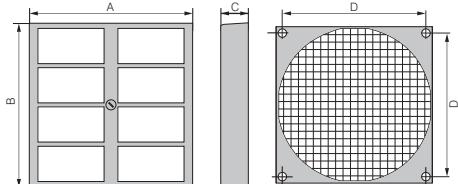

Protection filter	Fan size	A	B	C	D	Replacement filter*

FF172	ø 172 mm	226	190	19,5	162,0	RF 172

Subject to alterations

\* Replacement filters only in packs of 5 pcs.

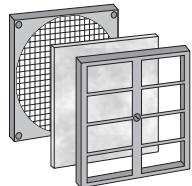

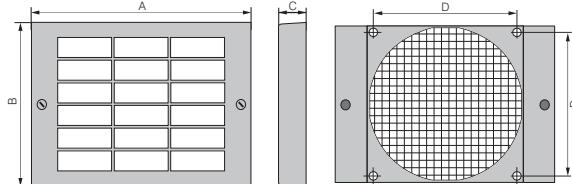

## FF60 / FF80

Fan size: 60 x 60 mm  
80 x 80 mm

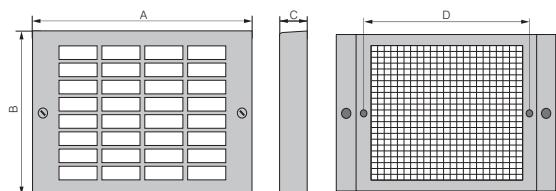

## FF92 / FF 119

Fan size: 92 x 92 mm  
119 x 119 mm

## FF 172

Fan size: ø 172 mm

## Filter performance

The filter guard grille filters 75% of dust particles with a size of 5-10 microns and can withstand temperatures of up to 100 °C. Filter class G3 in line with DIN EN 779.

Flame-retardant in line with DIN 53438, class F1. With a clean mounted filter, a reduction of air flow of 20-30% is possible.

# Connection leads (ESM) / Handheld Programmer

- **Design:** Cable conforms to UL standards, sealed plug.  
Custom-built connection leads on request.

## Connection leads for energy-saving motors 115/230 VAC

Part no.	a
13060-4-1040	450
13061-4-1040	1500

Subject to alterations

- Easy speed programming
- Battery operated
- User-friendly navigation menu
- Protective boot with kickstand

## For Energy Saving Motor (ESM) based products

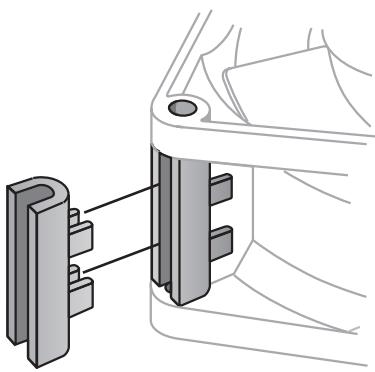

Part no.
CBC 000-AF08-01

Subject to alterations

Makes quick work of programming the two ESM selectable operating speeds. Eliminates the need for a personal computer, software, power adapter and 2nd cable. Good for production line or field service use. Automatic shut-off function for an extended battery life. Mini-USB connector for uploading software upgrades. Batteries, programming cable and operating manual included.

# Accessories

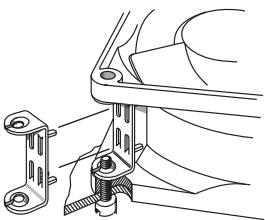

In addition to the accessories and assembly parts listed in this catalogue, ebm-papst also supplies numerous special parts for fans. The sales experts at ebm-papst will be happy to assist you in your enquiries concerning fan assembly and application.

Fan series	Accessories
8300	LZ212 / LZ260
8400 N	LZ261
3400 N	LZ261
9000	LZ210
4000	LZ210
4300	LZ212 / LZ260

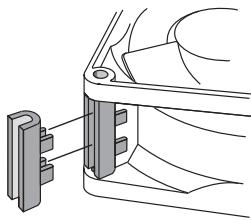

Fan series	Accessories
5100	LZ210
5600	LZ210
5200	LZ210
5900	LZ210
7000	LZ210
VARIOFAN	LZ370

LZ212

Screw clip of stainless steel.  
For mounting fans with threaded pin 3.5 DIN EN ISO 1478 (7970).

LZ260/LZ261

Spacer of fibreglass reinforced plastic. For screw mounting over both fan mounting flanges.

LZ210

Screw clip of hardened steel. For mounting fans with threaded pin 6-32 UNC and/or 3.5 DIN 7970.

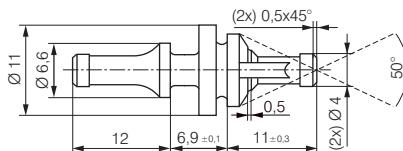

LZ370

Required performance data:  
 $R_{25} = 100 \text{ k}\Omega \pm 5\% @ 25^\circ\text{C}$   
 B-value =  $4190 \pm 2\%$   
 $P_{max} = 0.25 \text{ W}$

Temperature sensor for speed-controlled fan operation. Temperature range 30...50 °C.

LZ550

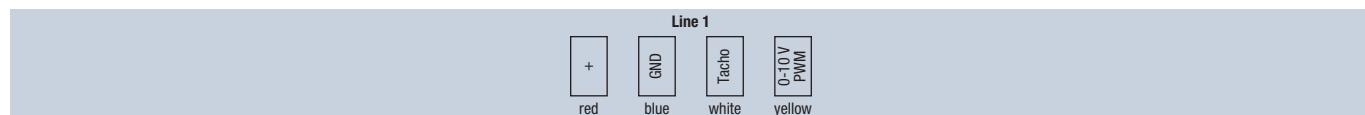

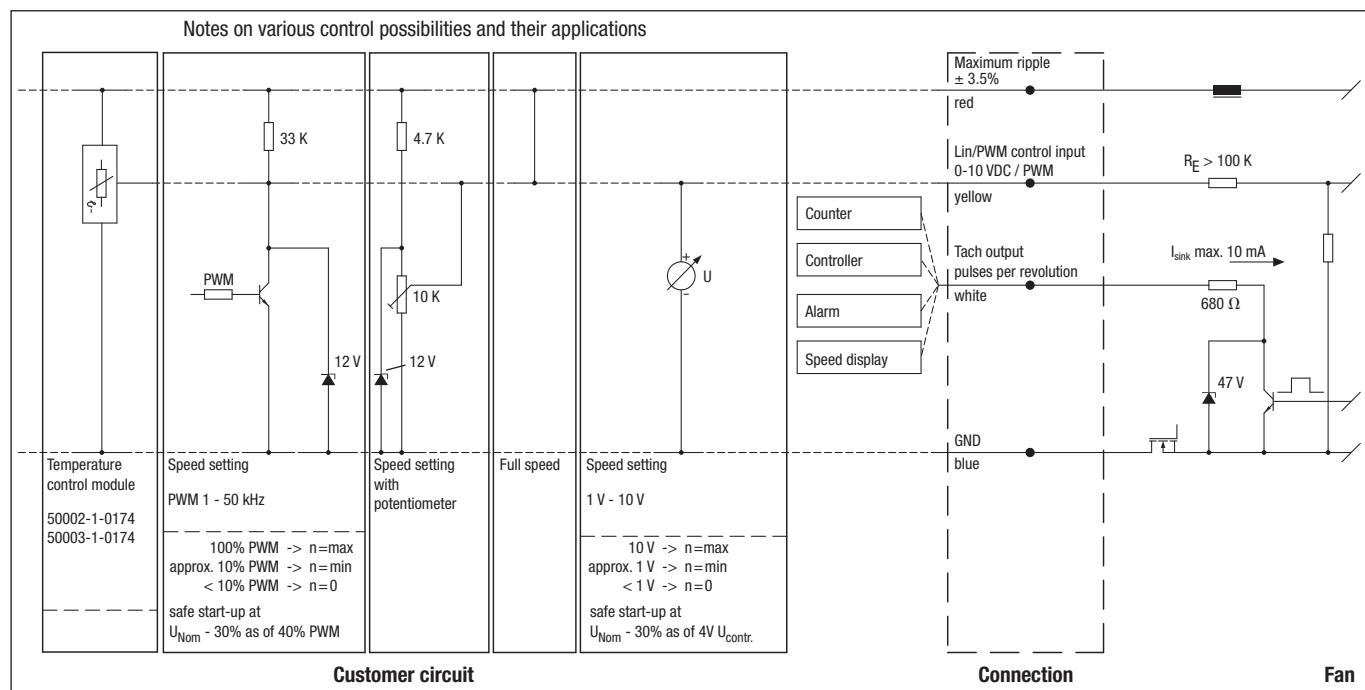

Rubber anti-vibration mounts  
for fans with a hole ø of  $4.3 \pm 0.2 \text{ mm}$  and  
flange thickness of  $3 - 5.5 \text{ mm}$ .  
For a carrier plate with a hole ø of  $6.5 \pm 0.15 \text{ mm}$   
and plate thickness of  $1 - 2 \text{ mm}$ .

# Electrical connections EC

## E)

### Technical features (Nominal voltage 24 / 48 VDC):

- Control input 0-10 VDC / PWM
- Tach output
- Reverse polarity and locked-rotor protection
- Motor current limitation
- Voltage-dependent derating
- Over-temperature protected electronics / motor
- Soft start

Line	Connection	Colour	Assignment / function
1	+	red	Maximum ripple $\pm 3.5\%$
	GND	blue	GND

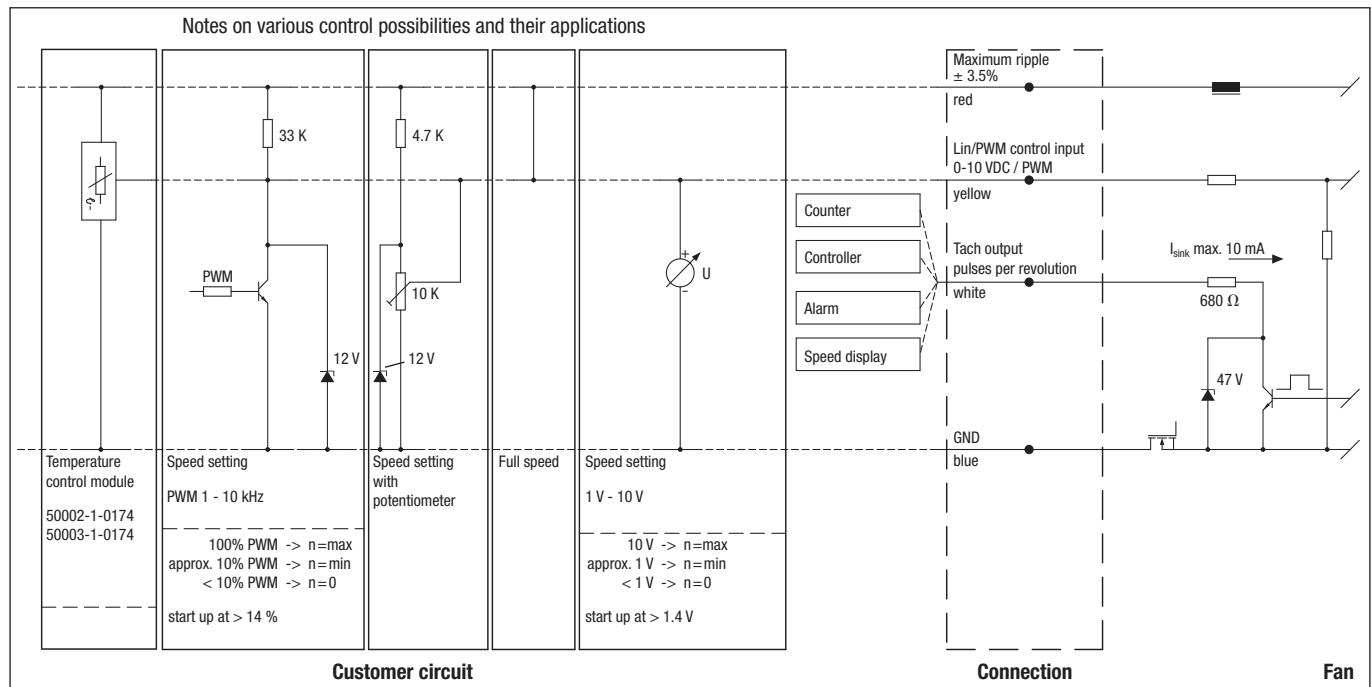

Line	Connection	Colour	Assignment / function
1	Tacho	white	Tach output
	0-10 V / PWM	yellow	Control input

# Electrical connections EC

## G

### Technical features (Nominal voltage 24 / 48 VDC):

- Control input 0-10 VDC / PWM
- Tach output
- Reverse polarity and locked-rotor protection

Line 1

Line	Connection	Colour	Assignment / function
1	+	red	Maximum ripple ± 3.5 %
	GND	blue	GND

Line	Connection	Colour	Assignment / function
1	Tacho	white	Tach output: 2 pulses / revolution (M1G045/M1G055) 3 pulses / revolution (M1G074/M1G084)
	0-10 V / PWM	yellow	Control input (Impedance 100 kΩ)

# Electrical connections EC H3)

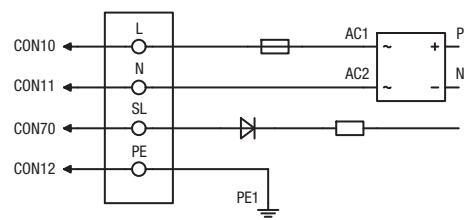

## Technical features (M3G 045 / M3G 055 with 2 Speed stages):

- Speed adjustment input (230V)
- Over-temperature protected electronics / motor
- Motor current limitation
- Locked-rotor protection
- Soft start

**Customer circuit**

**Connection**

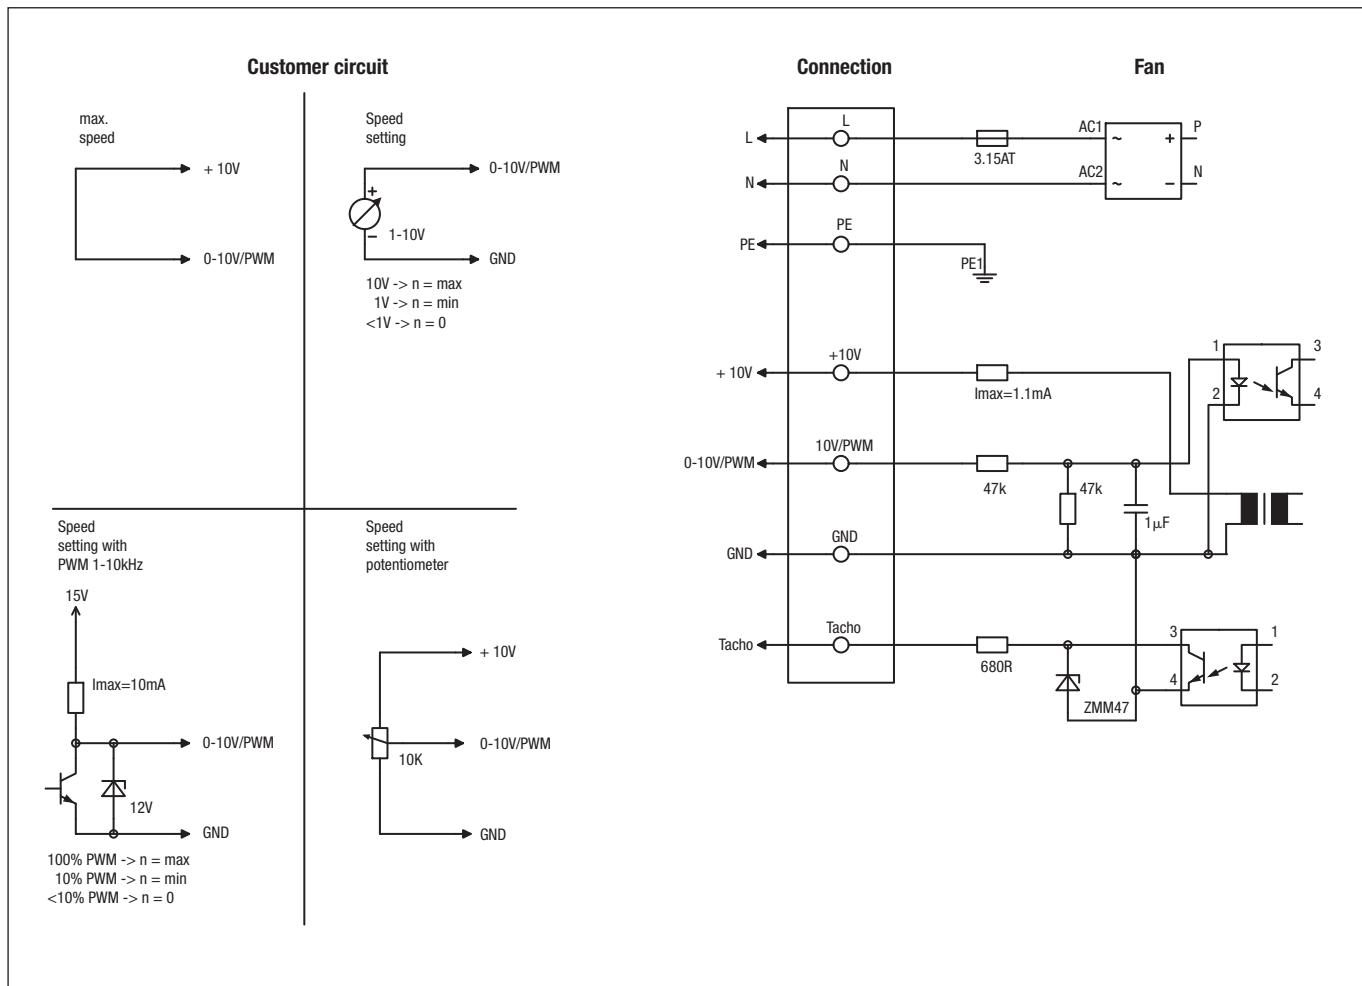

**Fan**

Line	Connection	Colour	Assignment / function
CON10	L	black	Power supply 230 VAC, 50 - 60 Hz, see type plate for voltage range
CON11	N	blue	Neutral conductor
CON12	PE	green/yellow	Protective earth
CON70	SL	brown	Speed selection: switch open = speed 1; switch closed = speed 2

# Electrical connections EC H4)

## Technical features (M3G 055 Speed-controlled):

- Output 10 VDC max. 1,1 mA
- Tach output
- Over-temperature protected electronics / motor
- Motor current limitation
- Soft start
- Locked-rotor protection
- Control input 0-10 VDC / PWM
- Control interface with SELV potential safely disconnected from the mains

Connection	Colour	Assignment / function
L	black	Power supply 230 VAC, 50 - 60 Hz, see type plate for voltage range
N	blue	Neutral conductor
PE	green/yellow	Protective earth
+10V/max.1.1mA	red	Voltage output +10 V / 1.1 mA, electrically isolated, not short-circuit-proof
Tacho	white	Tach output: Open Collector, 1 pulse per revolution, electrically isolated
0-10V PWM	yellow	Control input 0 - 10 V or PWM, electrically isolated
GND	blue	GND - Connection for control interface

# Electrical connections EC J5)

## Technical features (Nominal voltage 24 / 48 VDC):

- Control input 0-10 VDC / PWM
- Tach output
- Reverse polarity and locked-rotor protection
- Motor current limitation
- Line undervoltage detection
- Soft start

Notes on various control possibilities and their applications

	<p>Speed setting with potentiometer</p> <p>10V -&gt; n = max 1V -&gt; n = min &lt;1V -&gt; n = 0 safe start-up at Unom -30% as of 4V Ucontr.</p>	<p>Speed setting with PWM 1-10kHz</p> <p>100% PWM -&gt; n = max 10% PWM -&gt; n = min &lt;10% PWM -&gt; n = 0 safe start-up at Unom -30% as of 40% PWM</p>	<p>Setting of values via temperature controller</p> <p>T&lt;10°C -&gt; n = 0 T&gt;45°C -&gt; n = max</p>	<p>Connection</p> <p>Customer circuit</p> <p>Fan</p>
--	--	--	--	--

Line	Connection	Colour	Assignment / function
1	UN +24/48 VDC	red	Power supply 24/48 VDC, Maximum ripple $\pm 3,5 \%$
2	0-10 VDC	yellow	Control input Re >100 K
3	Tach	white	Speed monitoring output, 3 pulses / revolution, Isink max. = 10 mA
4	GND	blue	Reference ground

# Electrical connections AC A1) / A3) / C2)

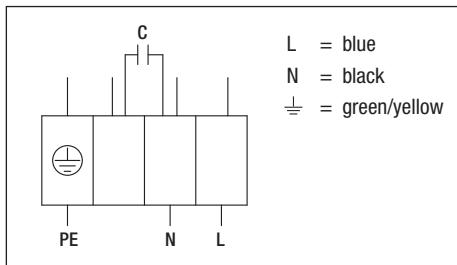

## A1) Single-phase capacitor motor (1~ 115/230 VAC power line)

with TOP wired internally

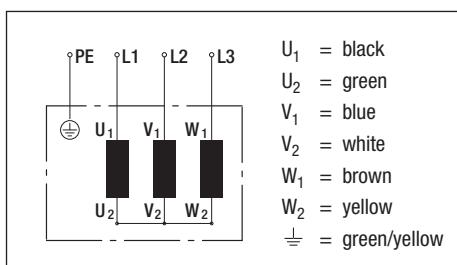

## A3) Single-phase capacitor motor (1~ 115/230 VAC power line)

with TOP wired internally

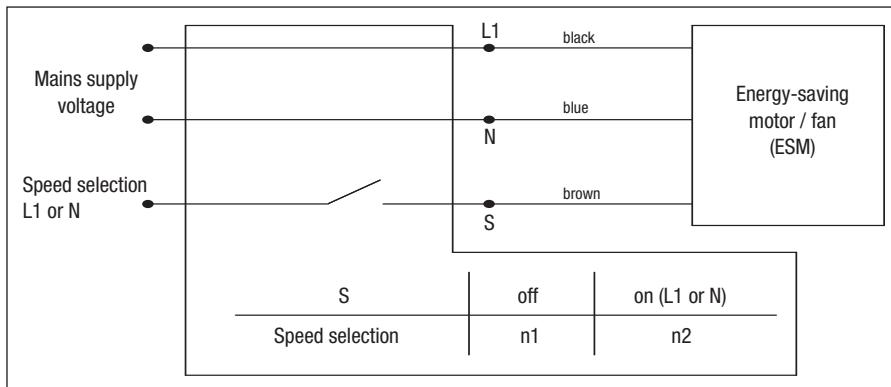

## C2) Star connection (3~ 400 VAC power line)

without TOP

# Electrical connections AC J7)

J7) Energy-saving motor (ESM) (1~ 115/230 VAC power line)
