# Thick Film Resistor Networks, Dual-In-Line, Molded DIP, 01, 03, 05 Schematics 

## FEATURES

- 0.160 " [4.06mm] maximum seated height and rugged, molded case construction.
- Highly stable thick film
- Low temperature coefficient $\left(-55^{\circ} \mathrm{C}\right.$ to $\left.+125^{\circ} \mathrm{C}\right)$ $\pm 100 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$
- Reduces total assembly costs
- Compatible with automatic inserting equipment
- Wide resistance range
- Uniform performance characteristics
- Available in tube pack

## CIRCUIT APPLICATIONS

01 Schematic

13 and 15 resistors with one pin common
The MDPXX-01 circuit provides a choice of 13 and 15 nominally equal resistors, each connected between a common pin (14 and 16) and a discrete PC board pin. Commonly used in the following applications:

- MOS/ROM Pull-up/Pull-down
- TTL Input Pull-down
- Open Collector Pull-up
- Digital Pulse Squaring
- "Wired OR" Pull-up
- TTL Unused Gate Pull-up
- High Speed Parallel Pull-up

03 Schematic

7 and 8 isolated resistors
The MDPXX-03 provides a choice of 7 and 8 nominally equal resistors, each resistor isolated from all others and wired directly across. Commonly used in the following applications:

- "Wired OR" Pull-up • Long-line Impedance Balancing
- Power Driven Pull-up •LED Current Limiting
- Powergate Pull-up •ECL Output Pull-down
- Line Termination
- TTL Input Pull-down

## 05 Schematic

TTL dual-line terminator; pulse squaring
The MDPXX-05 circuit contains 12 and 14 series pair of resistors. Each series pair is connected between ground and a common line The junction of these resistor pairs is connected to the input terminals. The 05 circuits are designed for TTL dual-line termination and pulse squaring.
