Please refer to "Quality grade on NEC Semiconductor Devices" (Document number IEI-1209) published by NEC Corporation to know the specifications of quality grade on the devices and its recommended applications.

ABSOLUTE MAXIMUM RATINGS ($T_a = 25\text{ }^{\circ}\text{C}$)

PARAMETER	SYMBOL	μ PC4559	UNIT
Voltage between V^+ and V^- (Note 1)	$V^+ - V^-$	-0.3 to +36	V
Differential Input Voltage	V_{ID}	± 30	V
Input Voltage (Note 2)	V_I	$V^- - 0.3$ to $V^+ + 0.3$	V
Output Voltage (Note 3)	V_O	$V^- - 0.3$ to $V^+ + 0.3$	V
Power Dissipation C Package (Note 4)	P_T	350	mW
Output Short Circuit Duration (Note 5)		Indefinite	sec
Operating Temperature Range	T_{opt}	-20 to +80	$^{\circ}\text{C}$
Storage Temperature Range	T_{stg}	-55 to +125	$^{\circ}\text{C}$

Note 1. Reverse connection of supply voltage can cause destruction.

Note 2. The input voltage should be allowed to input without damage or destruction. Even during the transition period of supply voltage, power on/off etc., this specification should be kept. The normal operation will establish when the both inputs are within the Common Mode Input Voltage Range of electrical characteristics.

Note 3. This specification is the voltage which should be allowed to supply to the output terminal from external without damage or destructive. Even during the transition period of supply voltage, power on/off etc., this specification should be kept. The output voltage of normal operation will be the Output Voltage Swing of electrical characteristics.

Note 4. Thermal derating factor is $-5.0\text{ mW}/^{\circ}\text{C}$ when ambient temperature is higher than $55\text{ }^{\circ}\text{C}$.

Note 5. Pay careful attention to the total power dissipation not to exceed the absolute maximum ratings, Note 4.
