General Description

TriQuint's TGA2731-SM is a driver amplifier fabricated on TriQuint's TQPHT25 0.25um GaAs production process. The TGA2731-SM operates from 2.7 to 4.0 GHz and provides > 30.7 dBm of output power with > 22.7 dB of large signal gain. The TGA2731-SM also includes a 13dB attenuator at the input, and a simple resistively coupled power detector at the output. The amplifier can be operated from a single supply in the self-biased mode.

The TGA2731-SM is offered in a 5x5 mm plastic QFN. It is well-matched to 50 ohms, and includes integrated DC blocking caps on both RF ports allowing for simple system integration.

Lead-Free & RoHS compliant.

Evaluation Boards are available on request.

Evaluation Board Layout

RF Layer is 0.008" thick Rogers Corp. RO4003C, $\epsilon_r = 3.38$. Metal layers are 0.5 oz. copper. The microstrip line at the connector interface is optimized for the Southwest Microwave end launch connector 1092-01A-5.

The pad pattern shown has been developed and tested for optimized assembly at TriQuint Semiconductor. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.
