

### Dual and Quad, 8MHz and 60MHz, Low Noise Operational Amplifiers

Low noise and high performance are key words describing HA-5102, HA-5104 and HA-5114. These general purpose amplifiers offer an array of dynamic specifications ranging from a 3V/μs slew rate and 8MHz bandwidth (5102/04) to 20V/μs slew rate and 60MHz gain-bandwidth-product (HA-5114). Complementing these outstanding parameters is a very low noise specification of 4.3nV/√Hz at 1kHz.

Fabricated using the Intersil high frequency DI process, these operational amplifiers also offer excellent input specifications such as a 0.5mV offset voltage and 30nA offset current. Complementing these specifications are 108dB open loop gain and 60dB channel separation. Consuming a very modest amount of power (90mW/package for duals and 150mW/package for quads), HA-5102/04/14 also provide 15mA of output current.

This impressive combination of features make this series of amplifiers ideally suited for designs ranging from audio amplifiers and active filters to the most demanding signal conditioning and instrumentation circuits.

These operational amplifiers are available in dual or quad form with industry standard pinouts allowing for immediate interchangeability with most other dual and quad operational amplifiers.

HA-5102 Dual, Comp.      HA-5104 Quad, Comp.  
 HA-5114 Quad, Uncomp.

**NOTES:**

- Channel separation value is referred to the input of the amplifier. Input test conditions are: f = 10kHz;  $V_{IN} = 100mV_{PEAK}$ ;  $R_S = 1k\Omega$ .
- Full power bandwidth is guaranteed by equation: Full power bandwidth =  $\frac{\text{Slew Rate}}{2\pi V_{PEAK}}$ .
- Refer to Test Circuits section of the data sheet.
- Settling time is measured to 0.1% of final value for a 1V input step, and  $A_V = -10$  for HA-5114, and a 10V input step,  $A_V = -1$  for HA-5102/5104.
- The limits for these parameters are guaranteed based on lab characterization, and reflect lot-to-lot variation.

3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH.
