40V, Low Quiescent Current, 150mA Linear Regulator

ISL80138

The ISL80138 is a high voltage, adjustable V_{OUT} low quiescent current linear regulator ideally suited for “always-on” and “keep alive” applications. The ISL80138 operates from an input voltage of +6V to +40V under normal operating conditions and consumes only 18µA of quiescent current at no load.

The ISL80138 features an EN pin that can be used to put the device into a low-quiescent current shutdown mode where it draws only 2µA of supply current. The device features over-temperature shutdown and current limit protection.

The ISL80138 is rated over the -40°C to +125°C temperature range and is available in a 14 lead HTSSOP with an exposed pad package.

Related Literature

- See FN7970, “ISL80136 40V, Low Quiescent Current, 50mA Linear Regulator”

Features

- Wide V_{IN} Range of 6V to 40V
- Adjustable Output Voltage from 2.5V to 12V
- Guaranteed 150mA Output Current
- Ultra Low 18µA Typical Quiescent Current
- Low 2µA of Typical Shutdown Current
- ±1% Accurate Voltage Reference
- Low Dropout Voltage of 295mV at 150mA
- 40V Tolerant Logic Level (TTL/CMOS) Enable Input
- Stable Operation with 10µF Output Capacitor
- 5kV ESD HBM Rated
- Thermal Shutdown and Current Limit Protection
- Thermally Enhanced 14 Ld Exposed Pad HTSSOP Package

Applications

- Industrial
- Telecommunications

Pin Descriptions

PIN NUMBER	PIN NAME	DESCRIPTION
1, 3, 4, 5, 6, 9, 10, 11, 13	NC	Pins have internal termination and can be left unconnected. Connection to ground is optional.
2	IN	Input voltage pin. A minimum 0.1µF ceramic capacitor is required for proper operation. Range 6V to 40V.
7	EN	Enable pin. High on this pin enables the device. Range 0V to V_{IN}.
8	GND	Ground pin.
12	ADJ	This pin is connected to the external feedback resistor divider which sets the LDO output voltage. Range 0V to 3V.
14	OUT	Regulated output voltage. A 10µF ceramic capacitor is required for stability. Range 0V to 12V.
-	EPAD	It is recommended to solder the EPAD to the ground plane.

NOTES:

1. Add “-T*” suffix for tape and reel. Please refer to TB347 for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for ISL80138. For more information on MSL please see techbrief TB363.

Absolute Maximum Ratings

IN Pin to GND Voltage . . . . . GND - 0.3V to +45V
OUT Pin to GND Voltage . . . . . GND - 0.3V to 16V
ADJ Pin to GND Voltage . . . . . GND - 0.3V to 3V
EN Pin to GND Voltage . . . . . GND - 0.3V to VIN
Output Short-circuit Duration . . . . . Indefinite

Thermal Shutdown	T_{SHDN}	Junction Temperature Rising		+165		°C
Thermal Shutdown Hysteresis	T_{HYST}			+20		°C

NOTES:

6. Dropout voltage is defined as (V_{IN} - V_{OUT}) when V_{OUT} is 2% below the value of V_{OUT} when V_{IN} = V_{OUT} + 3V.
7. Enable to Regulation is the time the output takes to reach 95% of its final value with V_{IN} = 14V and EN is taken from V_{IL} to V_{IH} in 5ns. For the adjustable versions, the output voltage is set at 5V.
8. Parameters with MIN and/or MAX limits are 100% tested at +25°C, unless otherwise specified. Temperature limits established by characterization and are not production tested.

Typical Performance Curves

V_{IN} = 14V, I_{OUT} = 1mA, V_{OUT} = 5V, T_J = +25°C, unless otherwise specified.

Functional Description

Functional Overview

The ISL80138 is a high performance, high voltage, low-dropout regulator (LDO) with 150mA sourcing capability. The part is rated to operate over the -40°C to +125°C temperature range. Featuring ultra-low quiescent current, it is an ideal choice for "always-on" applications. It works well under a "load dump condition" where the input voltage could rise up to 40V. This LDO device also features current limit and thermal shutdown protection.

Enable Control

The ISL80138 has an enable pin, which turns the device on when pulled high. When EN is low, the IC goes into shutdown mode and draws less than 2µA. In "always-on" applications, EN can be tied to IN.

Current Limit Protection

The ISL80138 has internal current limiting functionality to protect the regulator during fault conditions. During current limit, the output sources a fixed amount of current largely independent of the output voltage. If the short or overload is removed from V_{OUT}, the output returns to normal voltage regulation mode.

Thermal Fault Protection

In the event that the die temperature exceeds a typical value of +165°C, the output of the LDO will shut down until the die temperature cools down to a typical +145°C. The level of power dissipated, combined with the ambient temperature and the thermal impedance of the package, determines if the junction temperature exceeds the thermal shutdown temperature. See the "Power Dissipation" section on page 7 for more details.

Application Information

Input and Output Capacitors

A minimum 0.1µF ceramic capacitor is recommended at the input for proper operation. For the output, a ceramic capacitor with a capacitance of 10µF is recommended for the ISL80138 to maintain stability. The ground connection of the output capacitor should be routed directly to the GND pin of the device and also placed close to the IC.

Output Voltage Setting

The ISL80138 output voltage is programmed using an external resistor divider as shown in Figure 11.

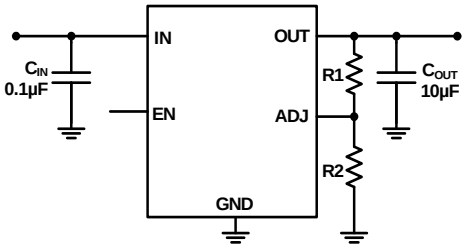

FIGURE 11. OUTPUT VOLTAGE SETTING

The output voltage is calculated using Equation 1:

$$V_{OUT} = 1.223V \times \left(\frac{R_1}{R_2} + 1\right) \quad \text{(EQ. 1)}$$

Power Dissipation

The junction temperature must not exceed the range specified in "Recommended Operating Conditions" on page 3. The power dissipation can be calculated using Equation 2:

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad \text{(EQ. 2)}$$

The maximum allowable junction temperature, $T_{J(MAX)}$ and the maximum expected ambient temperature, $T_{A(MAX)}$ will determine the maximum allowable junction temperature rise (ΔT_J), as shown in Equation 3:

$$\Delta T_J = T_{J(MAX)} - T_{A(MAX)} \quad \text{(EQ. 3)}$$

To calculate the maximum ambient operating temperature, use the junction-to-ambient thermal resistance (θ_{JA}) as shown in Equation 4:

$$T_{J(MAX)} = P_{D(MAX)} \times \theta_{JA} + T_A \quad \text{(EQ. 4)}$$

Board Layout Recommendations

A good PCB layout is important to achieve expected performance. Consideration should be taken when placing the components and routing the trace to minimize the ground impedance and keep the parasitic inductance low. The input and output capacitors should have a good ground connection and be placed as close to the IC as possible. The feedback trace in the adjustable version should be away from other noisy traces.
The 14 Ld HTSSOP package uses the copper area on the PCB as a heat-sink. The EPAD of this package must be soldered to the copper plane (GND plane) for effective heat dissipation.
Figure 12 shows a curve for θ_{JA} of the package for different copper area sizes.

TYPICAL RECOMMENDED LAND PATTERN

NOTES:

1. Dimension does not include mold flash, protrusions or gate burrs. Mold flash, protrusions or gate burrs shall not exceed 0.15 per side.
2. Dimension does not include interlead flash or protrusion. Interlead flash or protrusion shall not exceed 0.25 per side.
3. Dimensions are measured at datum plane H.
4. Dimensioning and tolerancing per ASME Y14.5M-1994.
5. Dimension does not include dambar protrusion.
   Allowable protrusion shall be 0.80mm total in excess of dimension at maximum material condition.
   Minimum space between protrusion and adjacent lead is 0.07mm.
6. Dimension in ( ) are for reference only.
7. Conforms to JEDEC MO-153, variation ABT-1.
