

The Future of Analog IC Technology™

EV3205DJ-00A

1.3MHz Fixed Frequency 5 White LED Driver

EVALUATION BOARD

GENERAL DESCRIPTION

The MP3205 is a step-up converter designed for driving up to 5 series white LEDs from a single cell Lithium Ion battery. The MP3205 uses current mode, fixed frequency architecture to regulate the LED current, which is measured through an external current sense resistor. Its low 104mV feedback voltage reduces power loss and improves efficiency.

The MP3205 includes under-voltage lockout, current limiting and thermal overload protection preventing damage in the event of an output overload. The MP3205 is available in a small 5-pin TSOT23 package.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	2.5 to 6	V
Number of WLEDs		5	

FEATURES

- On Board Power MOSFET
- Drives Up to 5 Series White LEDs
- Up to 87% Efficiency
- Over 1MHz Fixed Switching Frequency
- Low 104mV Feedback Voltage
- Soft-Start/PWM Dimming
- UVLO, Thermal Shutdown
- Internal Current Limit

APPLICATIONS

- Cell Phones
- Handheld Computers and PDAs
- Digital Still Cameras
- Small LCD Displays Application

"MPS" and "The Future of Analog IC Technology" are Trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. Solder LED1 through LED5 to the board.
2. Connect the positive and negative terminals of power supply (2.5V to 6V) to VIN and GND pins, respectively.
3. Drive EN high to turn on the MP3205; low to shut it down.
4. To use burst-mode brightness control, drive EN with a PWM signal.
