

SM803020

Flexible Ultra-Low Jitter Clock Synthesizer

General Description

The SM803020 is a dual-PLL clock generator that achieves ultra-low, 74.2fs_{rms} output jitter at 156.25MHz output frequency. It accepts a crystal input or a reference input.

Each output channel is individually configurable to a differential PECL, LVDS, HCSL, or CMOS output logic level. PECL is selected by default, but can be overridden through SPI. It is packaged in a dual-row 84-pin 7mm x 7mm package.

Datasheets and support documentation are available on Micrel's web site at: www.micrel.com.

Typical Application

Features

- Generates twelve 156.25MHz outputs
- Independently programmable output logic:
 - Output logic: LVPECL (default), LVDS, HCSL, LVCMOS
- 74.2fs jitter at 156.25MHz (1.875MHz to 20MHz)
- Selectable inputs require 39.0625MHz input frequency
 - XTAL (default)
 - Differential or single-ended reference clock (SPI selectable)
- 2.5V or 3.3V operating power supply
- Separate output power supplies:
 - Different banks can be at different levels
- Industrial temperature range (–40°C to +85°C)
- Green, RoHS, and PFOS compliant
- Available in 84-pin 7mm × 7mm QFN package

Applications

- 1/10/40/100 Gigabit Ethernet

Output Logic Programming

Available output logic types are LVPECL (default), LVDS, HCSL and LVCMOS.

Each output can be programmed individually to any of the four logic types through SPI.

Unused outputs can be disabled to high impedance.

All logic types are differential except LVCMOS. LVCMOS signals are single ended coming out of the Qx pins. During LVCMOS operation the /Qx pins are disabled.

Notes:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this datasheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. The datasheet limits are not guaranteed if the device exceeds the operating ratings.
3. Crystal input is powered from V_{DDI_2} analog supply voltage source.

HCSL DC Electrical Characteristics

$V_{DDCore} = V_{DD} = V_{DD0} = 3.3V \pm 5\%$ or $2.5V \pm 5\%$, $T_A = -40^\circ C$ to $+85^\circ C$, unless otherwise noted. $R_L = 50\Omega$ to V_{SS} .

Notes:

4. Defined as skew between outputs at the same supply voltage and with equal load conditions; measured at the output differential crossing points.
5. Output-to-output skew is only defined for outputs in the same PLL bank [A:B, C:D] with the same output type setting.
6. All phase noise measurements were taken with an Agilent 5052B phase noise system.

156.25MHz, integration range 1.875MHz to 20MHz: 74.2fs rms

156.25MHz, integration range 12kHz to 20MHz: 182.4fs rms

Application Information

Input Reference

When operating with a crystal input reference, do not apply a switching signal to a REF_IN.

Crystal Layout

Keep the layers under the crystal as open as possible and do not place switching signals or noisy supplies under the crystal.

Crystal load capacitance is built inside the die so no external capacitance is needed. See the *Selecting a Quartz Crystal for the Clockworks Flex I Family of Precision Synthesizers* application note for more details.

Power Supply Filtering Recommendations

Figure 1. Recommended Power Supply Filtering

- Use the power supply filtering shown in [Figure 1](#) for VDDAP1, VDDAP2, VDDI1 and VDDI2.
- Connect the VDDO and VDD pins directly to the VDD power plane.
- Connect all VSS pins directly to the ground power plane.

Notes:

- 7. Power-saving alternative to Thevenin termination.
- 8. Place termination resistors as close to destination inputs as possible.
- 9. R_b resistor set the DC bias voltage, equal to V_T .
- 10. For 2.5V systems, $R_b = 19\Omega$. For 3.3V systems, $R_b = 50\Omega$.

Package Information⁽¹¹⁾

- NOTE:
1. MAX PACKAGE WARPAGE IS 0.05mm.
 2. MAX ALLOWABLE BURR IS 0.076mm IN ALL DIRECTIONS.
 3. PIN #1 IS ON TOP WILL BE LASER MARKED.
 4. RED CIRCLE IN LAND PATTERN INDICATES THERMAL VIA. SIZE SHOULD BE 0.30-0.35mm IN DIAMETER AND SHOULD BE CONNECTED TO GND FOR MAXIMUM THERMAL PERFORMANCE. PITCH IS 0.90mm.
 5. GREEN RECTANGLES (SHADED AREA) REPRESENT SOLDER STENCIL OPENING ON EXPOSED PAD AREA. RECOMMENDED SIZE IS 0.70x0.70 mm, PITCH IS 0.90 mm.

84-Pin QFN 7mm x 7mm
