9-Bit Latch ECL to TTL Translator

Description

The MC10H/100H603 is a 9-bit, dual supply ECL to TTL translator. Devices in the ON Semiconductor 9-bit translator series utilize the 28-lead PLCC for optimal power pinning, signal flow-through and electrical performance.

The devices feature a 48 mA TTL output stage, and AC performance is specified into both a 50 pF and 200 pF load capacitance. Latching is controlled by Latch Enable (LEN), and Master Reset (MR) resets the latches. A HIGH on $\overline{OEECL}$ sends the outputs into the high impedance state. All control inputs are ECL level.

The 10H version is compatible with MECL 10H™ ECL logic levels. The 100H version is compatible with 100K levels.

Features

- 9-Bit Ideal for Byte-Parity Applications
- 3-State TTL Outputs
