InGaP HBT Gain Block

Data Sheet

Description

Avago Technologies' AVT-50663 is an economical, easy-to-use, general purpose InGaP HBT MMIC gain block amplifier utilizing Darlington pair configuration housed in a 6-lead (SOT-363) surface mount plastic package.

The Darlington feedback structure provides inherent broad bandwidth performance, resulting in useful operating frequency up to 6 GHz. This is an ideal device for small-signal gain cascades or IF amplification.

AVT-50663 is fabricated using advanced InGaP HBT (Hetero-junction Bipolar Transistor) technology that offers state-of-the-art reliability, temperature stability and performance consistency.
