## **1. Introduction**

The OMB.6912.03F21 is a 4G fiberglass omnidirectional outdoor antenna, operating in the worldwide 4G 698-960 and 1710-2700MHz bands and has 4.5 dBi maximum gain. The collinear dipole array antenna is designed especially for outdoor applications connecting via 4G routers and modules. Its compact dimensions of 320mm in length and 70mm diameter allow it to be mounted conveniently and unobtrusively in any location, compared to traditional fiberglass omni antennas which are twice the size.

The omnidirectional antenna radiates uniformly in the azimuth providing long distance coverage, thus minimizing the number of nodes needed for a radio network.

The UV resistant fiberglass housing enables this OMB series antenna to be used in harsh weather environments, making it more robust and safer than traditional whip antennas. The main band of operation is between 698MHz to 2170MHz; however, it can also be used for shorter range 2600MHz applications.

The antenna can be mounted on a wall via the convenient pre-installed mounting bracket or on a pole with the additional supplied U-bolt. An industry standard N-type Female connector is used. The connector can be customized upon request subject to MOQ. Contact your regional Taoglas sales office for details.
