4-Line BUS-Port ESD-Protection

Features

- Ultra compact SOT-23-6L package
- 4-line USB ESD-protection
- Low leakage current
- Low load capacitance C_D = 1.2 pF
- ESD-protection acc. IEC 61000-4-2
  - ± 30 kV contact discharge
  - ± 30 kV air discharge
- High surge current acc. IEC61000-4-5 I_{PP} > 11 A
- Compliant to RoHS directive 2002/95/EC and in accordance to WEEE 2002/96/EC

Pb-free

Application Note

With the VBUS054CV-06S a double, high speed USB-port can be protected against transient voltage signals. Negative transients will be clamped close below the ground level while positive transients will be clamped close above the 5 V working range. An avalanche diode clamps the supply line (V_{BUS} at pin 5) to ground (pin 2). The high speed data lines, D1+, D2+, D1- and D2- , are connected to pin 1, 3, 4 and 6. As long as the signal voltage on the data lines is between the ground- and the V_{BUS} -level, the low capacitance PN-diodes offer a very high isolation to V_{BUS} , ground and to the other data lines. But as soon as any transient signal exceeds this working range, one of the PN-diodes gets in the forward mode and clamps the transient to ground or the avalanche break through voltage level.
