Application Information

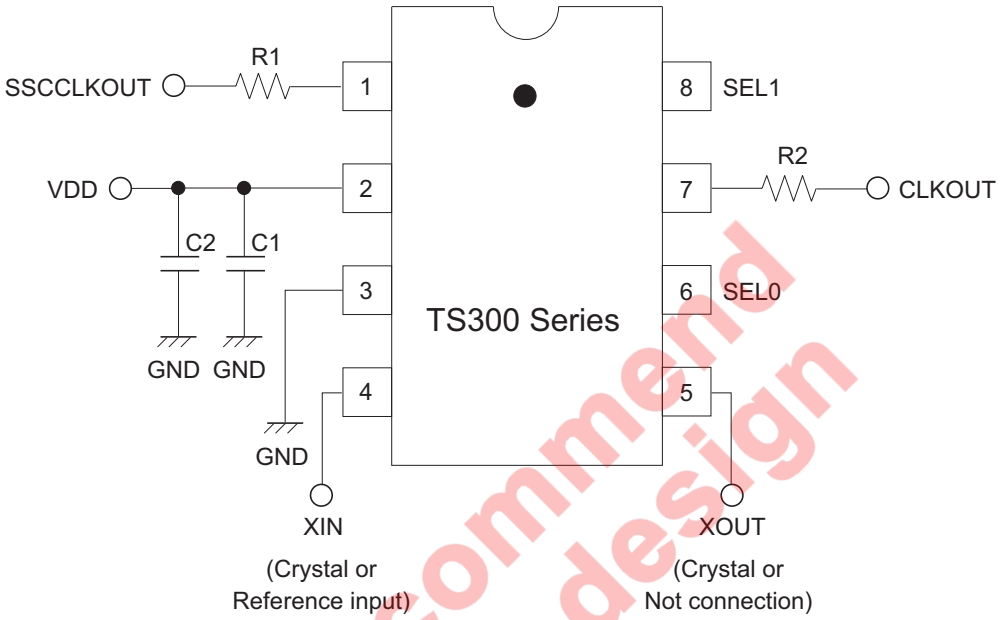
1. Recommended Circuit Configuration

The power supply circuit of the optimal performance on the application of a system should refer to Fig. 2.

VDD decoupling is important to both reduce Jitter and EMI radiation.

The C1 decoupling capacitor should be placed as close to the VDD pin as possible, otherwise the increased trace inductance will negate its decoupling capability.

The C2 decoupling capacitor shown should be a tantalum type.



Notes: C1 = High frequency supply decoupling capacitor.
(0.1 µF recommended)
C2 = Low frequency supply decoupling capacitor.
(22 µF tantalum type recommended)
R1, R2 = Match value to line impedance.
(22 Ω Reference value)
