Note

- In practical operation the lower limit of the series resistance and impedance is given by the ohmic part of the contact points and the foil resistance values. Therefore it will not always be possible to achieve calculated values below 0.05 Ω .

I_R Rated ripple current (100 Hz, RMS) [A] at upper category temperature T_{UC} taken from datasheet

I User ripple current [A]

T_A Ambient temperature of capacitor [°C]

L Lifetime multiplier

Regard L as a function of ambient temperature (x-axis) and of current (y-axis); use the current-axis according to the frequency
