Description

The MADL-011008 is a silicon PIN limiter with small I-region length specifically designed for medium signal applications. The limiter is available in a lead-free 1.2 x 1.5 mm 6-lead PDFN package. The limiter is ideally designed to provide low insertion loss, at zero bias, as well as low flat leakage power with fast signal response/recovery times.

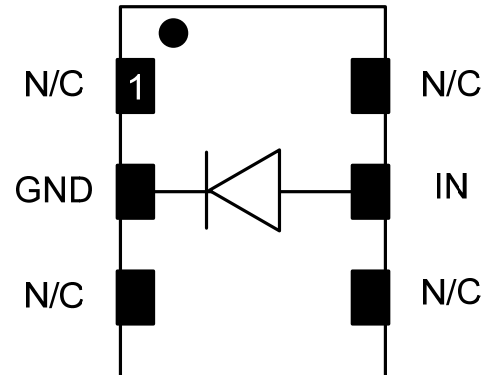

The MADL-011008 PIN limiter is designed for use in passive limiter control circuits to protect sensitive receiver components such as low noise amplifiers (LNA), detectors, and mixers.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Silicon Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
