PWM DC/DC Converter IC with Standby Function

■GENERAL DESCRIPTION

The NJM2344 is a general purpose PWM DC/DC converter IC configurable for step-up, step-down and inverting applications.
An internal 1.5A power transistor, a pulse-by pulse current limit and 1% precision reference make the NJM2344 suitable for a wide range of voltage converter needs.
The NJM2344 features a standby function that can be used for both power saving and safety operation.

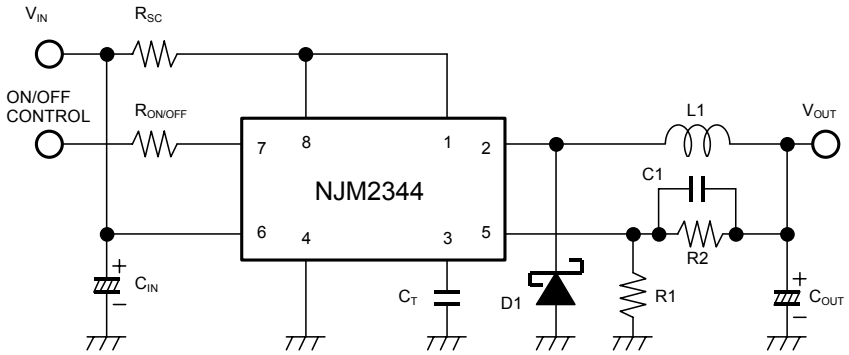
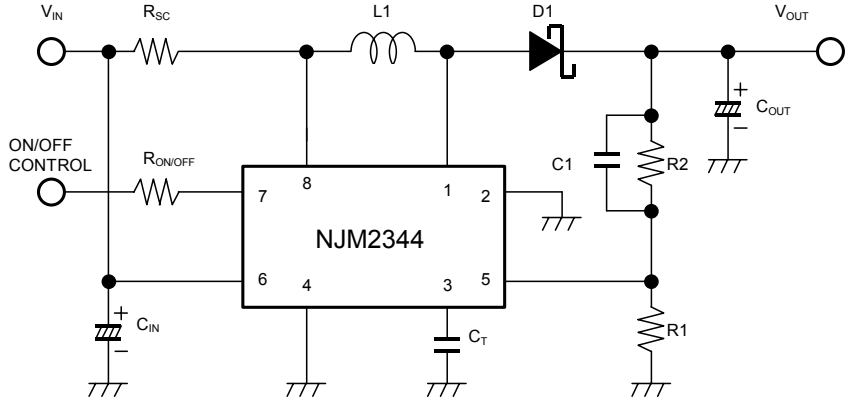
■TYPICAL APPLICATIONS

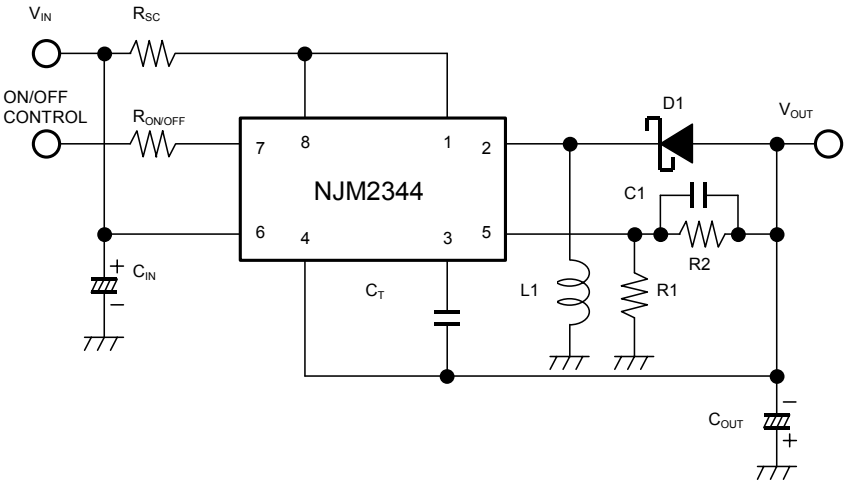
Step-Down Converter



Step-Up Converter



Inverting Converter



Though the $I_{ON/OFF}$ decreases by inserting "$R_{ON/OFF}$ " to between ON/OFF terminal and V_{IN} terminal, the minimum operating voltage is increased due to the resister " $R_{ON/OFF}$ ".
