

Low Dropout CMOS Voltage Regulators

LM1114

Features

- Maximum output current 250mA
- Highly accurate : output voltage $\pm 2\%$
- Low power consumption : typ. $2 \mu A$
- Small input/output differential:
 0.4V at 160mA($V_{out}=2.5V, 3.0V, 3.3V, 3.6V$)
 0.12V at 100mA($V_{out}=5V$)

Applications

- Battery powered equipment
- Palmtops
- Portable cameras and video recorders
- Reference voltage sources

Product Description

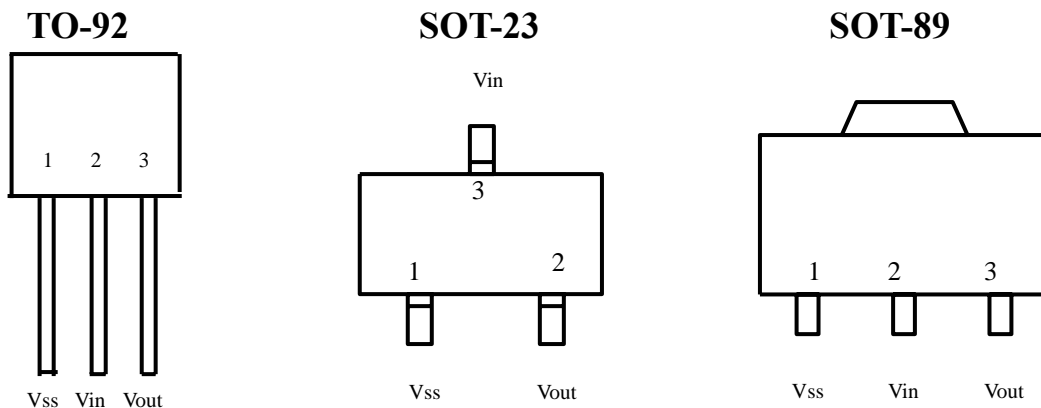

The LM1114 series is a group of positive voltage output, three-pin regulators, that provide a high current even when the input/output voltage differential is small. Low power consumption and high accuracy is achieved through CMOS and programmable fuse technologies. Output voltage: 2V to 6V in 0.1V increments.

The LM1114 consists of a high-precision voltage reference, an error correction circuit, and a current limited output driver. Transient response to load variations is improved in comparison to the existing ones.
