

# 8-Channel, Dual 4-Channel, Triple 2-Channel Multiplexers, with 0.5 pC Charge Injection

## DESCRIPTION

The DG4051A, DG4052A and DG4053A are precision low voltage, single and dual supply CMOS analog multiplexers. The DG4051A is an 8-channel multiplexer, the DG4052A is a dual 4-channel multiplexer and the DG4053A is a triple 2-channel multiplexer or triple SPDT.

They are designed to operate from a +2.7 V to +12 V single supply or from ±2.5 V to ±5 V dual supplies and are fully specified at +3 V, +5 V and ±5 V. All control logic inputs have guaranteed 2.0 V high limit when operating from +5 V or ±5 V supplies and 1.4 V when operating from a +3 V supply.

The DG4051A, DG4052A and DG4053A switches conduct equally well in both directions, offer rail to rail analog signal handling and can be used both as multiplexers as well as de-multiplexers.

< 0.5 pC low charge injection coupled with very low switch capacitance make these products ideal for precision instrumentation multiplexers.

Operating temperature is specified from -40 °C to +125 °C.

The DG4051A, DG4052A and DG4053A are available in 16 lead SOIC, TSSOP and the space saving 1.8 x 2.6 mm miniQFN packages.

- e. Manual soldering with iron is not recommended for leadless components. The miniQFN-16 is a leadless package. The end of the lead terminal is exposed copper (not plated) as a result of the singulation process in manufacturing. A solder fillet at the exposed copper lip cannot be guaranteed and is not required to ensure adequate bottom side solder interconnection.

## Notes:

- $V_{IN}$  = input voltage to perform proper function.
- Room = 25 °C, Full = as determined by the operating temperature suffix.
- Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
- The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- Guaranteed by design, not subject to production test.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
