

# EFR32BG1 Blue Gecko *Bluetooth*® 低能耗 SoC 产品系列数据表

Blue Gecko Bluetooth 低能耗 SoC 产品系列是 Wireless Gecko 产品组合的组成部分。Blue Gecko SoC 是实现 IoT 设备上节能 Bluetooth 连网的理想之选。

此单芯片解决方案可实现行业领先能效，具有超快唤醒速度，配备可扩展功率放大器、集成平衡-不平衡转换器和高性能 MCU。

Blue Gecko 应用包括：

- IoT 传感器和终端设备
- 健康和保健
- 住宅和楼宇自动化
- 配件
- 人机接口设备
- 测量
- 商业和零售照明与传感

## 主要特点

- 32 位 ARM® Cortex®-M4 内核，最高工作频率为 40 MHz
- 最高 256 kB 闪存和 32 kB RAM
- 12 信道外围设备反射系统，可实现 MCU 外围设备的自主交互
- 自主硬件加密加速器和随机数生成器
- 集成的功率放大器 (PA)，在 2.4 GHz 频段时发射 (TX) 功率最高为 19 dBm，在 1 GHz 以下频段时 TX 功率最高为 20 dBm
- 集成的 2.4 GHz 平衡-不平衡转换器
- 强大的外围设备及多达 31 个 GPIO

## 1. 功能列表

EFR32BG1 突出功能如下所列。

- **低功耗无线片上系统**
  - 高性能 32 位 40 MHz ARM Cortex®-M4，带有 DSP 指令和浮点单元，可实现高效的信号处理
  - 最高 256 kB 闪存程序存储器
  - 最高 32 kB RAM 数据存储器
  - 2.4 GHz 和 1 GHz 以下无线电操作
  - 发射功率：
    - 2.4 GHz 无线电：最高 19.5 dBm
    - 1 GHz 以下的无线电：最高 20 dBm
- **低功耗**
  - 在 2.4 GHz、1 Mbps、GFSK 的条件下，RX 电流为 8.7 mA
  - 在 169 MHz、38.4 kbps、GFSK 的条件下，RX 电流为 7.6 mA
  - 在 2.4 GHz、0 dBm 输出功率的条件下，TX 电流为 8.2 mA
  - 在 868 MHz、14 dBm 输出功率的条件下，TX 电流为 34.5 mA
  - 在活动模式 (EM0) 下，运行功耗为 63  $\mu$ A/MHz
  - 在 EM2 深度睡眠模式下，电流为 2.2  $\mu$ A（保留 4 kB RAM，RTCC 从 LFRCO 中运行）
  - 无线模块唤醒，带有信号强度检测，前导模式检测，帧检测和超时功能
- **高接收器性能**
  - 在 2.4 GHz、1 Mbit/s GFSK 的条件下，灵敏度为 -92.5 dBm
  - 在 2.4 GHz、250 kbps DSSS-OQPSK 的条件下，灵敏度为 -99 dBm
  - 在 915 MHz、600 bps、GFSK 的条件下，灵敏度为 -126.4 dBm
  - 在 868 MHz、2.4 kbps、GFSK 的条件下，灵敏度为 -121.4 dBm
  - 在 433 MHz、4.8 kbps、OOK 的条件下，灵敏度为 -107 dBm
  - 在 169 MHz、38.4 kbps、GFSK 的条件下，灵敏度为 -111.9 dBm
- **支持的调制格式**
  - 2/4 (G)FSK，可配置完整波形
  - BPSK / DBPSK TX
  - OOK / ASK
  - 已调制好波形的 OQPSK / (G)MSK
  - 可配置的 DSSS 和 FEC
- **支持的协议**
  - Bluetooth® 低功耗
  - 专有协议
  - 无线 M-Bus
  - 部分 IEEE 802.15.4g SUN-FSK PHY
  - 低功耗广域网
- **适用于符合以下要求的系统：**
  - FCC Part 90.210 Mask D, FCC part 15.247, 15.231, 15.249
  - ETSI I 类操作, EN 300 220, EN 300 328
  - ARIB T-108, T-96
  - 中国法规
- **更多 MCU 外围设备选择**
  - 12 位 1 Msps SAR 模拟数字转换器 (ADC)
  - 2 个模拟比较器 (ACMP)
  - 数字模拟电流转换器 (IDAC)
  - 高达 31 个引脚连接至模拟外围设备共享的模拟信道 (APORT)
  - 高达 31 个带有输出状态保持和异步中断功能的通用 I/O 引脚
  - 8 信道 DMA 控制器
  - 12 信道外围设备反射系统 (PRS)
  - 2 个 16 位定时器/计数器
    - 3 或 4 个比较/捕获/PWM 通道
  - 32 位实时计数器和日历
  - 16 位低功耗定时器，用于波形生成
  - 32 位超低功耗定时器/计数器，用于任何能源模式的定期唤醒
  - 16 位脉冲计数器，带有异步操作
  - 带有专用 RC 振荡器的看门狗定时器
  - 2 个通用同步/异步接收器/传输器 (UART/SPI/SmartCard (ISO 7816)/IrDA/I<sup>2</sup>S)
  - 低功耗 UART (LEUART™)
  - I<sup>2</sup>C 接口，带有 SMBus 支持和 EM3 停止模式下的地址识别
- **较大工作范围**
  - 单电源 1.85 V 至 3.8 V
  - 集成的直流到直流，系统负载电流高达 200 mA 时，输出电压低至 1.8 V
  - 提供标准温度范围（-40 °C 至 85 °C）和更大温度范围（-40 °C 至 125 °C）
- **支持互联网安全**
  - 通用 CRC
  - 随机数生成器
  - 硬件加密加速器，支持 AES 128/256、SHA-1、SHA-2（SHA-224 和 SHA-256）和 ECC
- **QFN32 5x5 mm 封装**
- **QFN48 7x7 mm 封装**

## 2. Ordering Information

**Table 2.1. Ordering Information**

| Ordering Code           | Protocol Stack                                                                              | Frequency Band<br>@ Max TX Power                                                                 | Flash<br>(kB) | RAM<br>(kB) | GPIO | Package | Temp Range    |

### 3. System Overview

#### 3.1 Introduction

The EFR32 product family combines an energy-friendly MCU with a highly integrated radio transceiver. The devices are well suited for any battery operated application as well as other systems requiring high performance and low energy consumption. This section gives a short introduction to the full radio and MCU system. The detailed functional description can be found in the EFR32xG1 Reference Manual.

A block diagram of the EFR32BG1 family is shown in [Figure 3.1 Detailed EFR32BG1 Block Diagram on page 8](#). The diagram shows a superset of features available on the family, which vary by OPN. For more information about specific device features, consult [Ordering Information](#).

Figure 3.1. Detailed EFR32BG1 Block Diagram

#### 3.2 Radio

The Blue Gecko family features a radio transceiver supporting Bluetooth® Low Energy and proprietary short range wireless protocols.

### 3.2.1 Antenna Interface

The EFR32BG1 family includes devices which support both single-band and dual-band RF communication over separate physical RF interfaces.

The 2.4 GHz antenna interface consists of two pins (2G4RF\_IOP and 2G4RF\_ION) that interface directly to the on-chip BALUN. The 2G4RF\_ION pin should be grounded externally.

The sub-GHz antenna interface consists of a differential transmit interface (pins SUBGRF\_OP and SUBGRF\_ON) and a differential receive interface (pins SUBGRF\_IP and SUBGRF\_IN).

The external components and power supply connections for the antenna interface typical applications are shown in the RF Matching Networks section.

### 3.2.2 Fractional-N Frequency Synthesizer

The EFR32BG1 contains a high performance, low phase noise, fully integrated fractional-N frequency synthesizer. The synthesizer is used in receive mode to generate the LO frequency used by the down-conversion mixer. It is also used in transmit mode to directly generate the modulated RF carrier.

The fractional-N architecture provides excellent phase noise performance combined with frequency resolution better than 100 Hz, with low energy consumption. The synthesizer has fast frequency settling which allows very short receiver and transmitter wake up times to optimize system energy consumption.

### 3.2.3 Receiver Architecture

The EFR32BG1 uses a low-IF receiver architecture, consisting of a Low-Noise Amplifier (LNA) followed by an I/Q down-conversion mixer, employing a crystal reference. The I/Q signals are further filtered and amplified before being sampled by the IF analog-to-digital converter (IFADC).

The IF frequency is configurable from 150 kHz to 1371 kHz. The IF can further be configured for high-side or low-side injection, providing flexibility with respect to known interferers at the image frequency.

The Automatic Gain Control (AGC) module adjusts the receiver gain to optimize performance and avoid saturation for excellent selectivity and blocking performance. The 2.4 GHz radio is calibrated at production to improve image rejection performance. The sub-GHz radio can be calibrated on-demand by the user for the desired frequency band.

Demodulation is performed in the digital domain. The demodulator performs configurable decimation and channel filtering to allow receive bandwidths ranging from 0.1 to 2530 kHz. High carrier frequency and baud rate offsets are tolerated by active estimation and compensation. Advanced features supporting high quality communication under adverse conditions include forward error correction by block and convolutional coding as well as Direct Sequence Spread Spectrum (DSSS) for 2.4 GHz and sub-GHz bands.

A Received Signal Strength Indicator (RSSI) is available for signal quality metrics, for level-based proximity detection, and for RF channel access by Collision Avoidance (CA) or Listen Before Talk (LBT) algorithms. An RSSI capture value is associated with each received frame and the dynamic RSSI measurement can be monitored throughout reception.

The EFR32BG1 features integrated support for antenna diversity to mitigate the problem of frequency-selective fading due to multipath propagation and improve link budget. Support for antenna diversity is available for specific PHY configurations in 2.4 GHz and sub-GHz bands. Internal configurable hardware controls an external switch for automatic switching between antennae during RF receive detection operations.

**Note:** Due to the shorter preamble of 802.15.4 and BLE packets, RX diversity is not supported.

### 3.2.4 Transmitter Architecture

The EFR32BG1 uses a direct-conversion transmitter architecture. For constant envelope modulation formats, the modulator controls phase and frequency modulation in the frequency synthesizer. Transmit symbols or chips are optionally shaped by a digital shaping filter. The shaping filter is fully configurable, including the BT product, and can be used to implement Gaussian or Raised Cosine shaping.

Carrier Sense Multiple Access - Collision Avoidance (CSMA-CA) or Listen Before Talk (LBT) algorithms can be automatically timed by the EFR32BG1. These algorithms are typically defined by regulatory standards to improve inter-operability in a given bandwidth between devices that otherwise lack synchronized RF channel access.

### 3.2.5 Wake on Radio

The Wake on Radio feature allows flexible, autonomous RF sensing, qualification, and demodulation without required MCU activity, using a subsystem of the EFR32BG1 including the Radio Controller (RAC), Peripheral Reflex System (PRS), and Low Energy peripherals.

### 3.2.6 RFSENSE

The RFSENSE module generates a system wakeup interrupt upon detection of wideband RF energy at the antenna interface, providing true RF wakeup capabilities from low energy modes including EM2, EM3 and EM4.

RFSENSE triggers on a relatively strong RF signal and is available in the lowest energy modes, allowing exceptionally low energy consumption. RFSENSE does not demodulate or otherwise qualify the received signal, but software may respond to the wakeup event by enabling normal RF reception.

Various strategies for optimizing power consumption and system response time in presence of false alarms may be employed using available timer peripherals.

### 3.2.7 Flexible Frame Handling

EFR32BG1 has an extensive and flexible frame handling support for easy implementation of even complex communication protocols. The Frame Controller (FRC) supports all low level and timing critical tasks together with the Radio Controller and Modulator/Demodulator:

- Highly adjustable preamble length
- Up to 2 simultaneous synchronization words, each up to 32 bits and providing separate interrupts
- Frame disassembly and address matching (filtering) to accept or reject frames
- Automatic ACK frame assembly and transmission
- Fully flexible CRC generation and verification:
  - Multiple CRC values can be embedded in a single frame
  - 8, 16, 24 or 32-bit CRC value
  - Configurable CRC bit and byte ordering
- Selectable bit-ordering (least significant or most significant bit first)
- Optional data whitening
- Optional Forward Error Correction (FEC), including convolutional encoding / decoding and block encoding / decoding
- Half rate convolutional encoder and decoder with constraint lengths from 2 to 7 and optional puncturing
- Optional symbol interleaving, typically used in combination with FEC
- Symbol coding, such as Manchester or DSSS, or biphasic space encoding using FEC hardware
- UART encoding over air, with start and stop bit insertion / removal
- Test mode support, such as modulated or unmodulated carrier output
- Received frame timestamping

### 3.2.8 Packet and State Trace

The EFR32BG1 Frame Controller has a packet and state trace unit that provides valuable information during the development phase. It features:

- Non-intrusive trace of transmit data, receive data and state information
- Data observability on a single-pin UART data output, or on a two-pin SPI data output
- Configurable data output bitrate / baudrate
- Multiplexed transmitted data, received data and state / meta information in a single serial data stream

### 3.2.9 Data Buffering

The EFR32BG1 features an advanced Radio Buffer Controller (BUFC) capable of handling up to 4 buffers of adjustable size from 64 bytes to 4096 bytes. Each buffer can be used for RX, TX or both. The buffer data is located in RAM, enabling zero-copy operations.

### 3.2.10 Radio Controller (RAC)

The Radio Controller controls the top level state of the radio subsystem in the EFR32BG1. It performs the following tasks:

- Precisely-timed control of enabling and disabling of the receiver and transmitter circuitry
- Run-time calibration of receiver, transmitter and frequency synthesizer
- Detailed frame transmission timing, including optional LBT or CSMA-CA

### 3.2.11 Random Number Generator

The Frame Controller (FRC) implements a random number generator that uses entropy gathered from noise in the RF receive chain. The data is suitable for use in cryptographic applications.

Output from the random number generator can be used either directly or as a seed or entropy source for software-based random number generator algorithms such as Fortuna.

### 3.3 Power

The EFR32BG1 has an Energy Management Unit (EMU) and efficient integrated regulators to generate internal supply voltages. Only a single external supply voltage is required, from which all internal voltages are created. An optional integrated DC-DC buck regulator can be utilized to further reduce the current consumption. The DC-DC regulator requires one external inductor and one external capacitor.

AVDD and VREGVDD need to be 1.85 V or higher for the MCU to operate across all conditions; however the rest of the system will operate down to 1.62 V, including the digital supply and I/O. This means that the device is fully compatible with 1.8 V components. Running from a sufficiently high supply, the device can use the DC-DC to regulate voltage not only for itself, but also for other PCB components, supplying up to a total of 200 mA.

#### 3.3.1 Energy Management Unit (EMU)

The Energy Management Unit manages transitions of energy modes in the device. Each energy mode defines which peripherals and features are available and the amount of current the device consumes. The EMU can also be used to turn off the power to unused RAM blocks, and it contains control registers for the DC-DC regulator and the Voltage Monitor (VMON). The VMON is used to monitor multiple supply voltages. It has multiple channels which can be programmed individually by the user to determine if a sensed supply has fallen below a chosen threshold.

#### 3.3.2 DC-DC Converter

The DC-DC buck converter covers a wide range of load currents and provides up to 90% efficiency in energy modes EM0, EM1, EM2 and EM3, and can supply up to 200 mA to the device and surrounding PCB components. Patented RF noise mitigation allows operation of the DC-DC converter without degrading sensitivity of radio components. Protection features include programmable current limiting, short-circuit protection, and dead-time protection. The DC-DC converter may also enter bypass mode when the input voltage is too low for efficient operation. In bypass mode, the DC-DC input supply is internally connected directly to its output through a low resistance switch. Bypass mode also supports in-rush current limiting to prevent input supply voltage droops due to excessive output current transients.

### 3.4 General Purpose Input/Output (GPIO)

EFR32BG1 has up to 31 General Purpose Input/Output pins. Each GPIO pin can be individually configured as either an output or input. More advanced configurations including open-drain, open-source, and glitch-filtering can be configured for each individual GPIO pin. The GPIO pins can be overridden by peripheral connections, like SPI communication. Each peripheral connection can be routed to several GPIO pins on the device. The input value of a GPIO pin can be routed through the Peripheral Reflex System to other peripherals. The GPIO subsystem supports asynchronous external pin interrupts.

### 3.5 Clocking

#### 3.5.1 Clock Management Unit (CMU)

The Clock Management Unit controls oscillators and clocks in the EFR32BG1. Individual enabling and disabling of clocks to all peripheral modules is performed by the CMU. The CMU also controls enabling and configuration of the oscillators. A high degree of flexibility allows software to optimize energy consumption in any specific application by minimizing power dissipation in unused peripherals and oscillators.

#### 3.5.2 Internal and External Oscillators

The EFR32BG1 supports two crystal oscillators and fully integrates four RC oscillators, listed below.

- A high frequency crystal oscillator (HFXO) with integrated load capacitors, tunable in small steps, provides a precise timing reference for the MCU. Crystal frequencies in the range from 38 to 40 MHz are supported. An external clock source such as a TCXO can also be applied to the HFXO input for improved accuracy over temperature.
- A 32.768 kHz crystal oscillator (LFXO) provides an accurate timing reference for low energy modes.
- An integrated high frequency RC oscillator (HFRCO) is available for the MCU system, when crystal accuracy is not required. The HFRCO employs fast startup at minimal energy consumption combined with a wide frequency range.
- An integrated auxiliary high frequency RC oscillator (AUXHFRCO) is available for timing the general-purpose ADC and the Serial Wire Viewer port with a wide frequency range.
- An integrated low frequency 32.768 kHz RC oscillator (LFRCO) can be used as a timing reference in low energy modes, when crystal accuracy is not required.
- An integrated ultra-low frequency 1 kHz RC oscillator (ULFRCO) is available to provide a timing reference at the lowest energy consumption in low energy modes.

## 3.6 Counters/Timers and PWM

### 3.6.1 Timer/Counter (TIMER)

TIMER peripherals keep track of timing, count events, generate PWM outputs and trigger timed actions in other peripherals through the PRS system. The core of each TIMER is a 16-bit counter with up to 4 compare/capture channels. Each channel is configurable in one of three modes. In capture mode, the counter state is stored in a buffer at a selected input event. In compare mode, the channel output reflects the comparison of the counter to a programmed threshold value. In PWM mode, the TIMER supports generation of pulse-width modulation (PWM) outputs of arbitrary waveforms defined by the sequence of values written to the compare registers, with optional dead-time insertion available in timer unit TIMER\_0 only.

### 3.6.2 Real Time Counter and Calendar (RTCC)

The Real Time Counter and Calendar (RTCC) is a 32-bit counter providing timekeeping in all energy modes. The RTCC includes a Binary Coded Decimal (BCD) calendar mode for easy time and date keeping. The RTCC can be clocked by any of the on-board oscillators with the exception of the AUXHFRCO, and it is capable of providing system wake-up at user defined instances. When receiving frames, the RTCC value can be used for timestamping. The RTCC includes 128 bytes of general purpose data retention, allowing easy and convenient data storage in all energy modes down to EM4H.

### 3.6.3 Low Energy Timer (LETIMER)

The unique LETIMER is a 16-bit timer that is available in energy mode EM2 Deep Sleep in addition to EM1 Sleep and EM0 Active. This allows it to be used for timing and output generation when most of the device is powered down, allowing simple tasks to be performed while the power consumption of the system is kept at an absolute minimum. The LETIMER can be used to output a variety of waveforms with minimal software intervention. The LETIMER is connected to the Real Time Counter and Calendar (RTCC), and can be configured to start counting on compare matches from the RTCC.

### 3.6.4 Ultra Low Power Wake-up Timer (CRYOTIMER)

The CRYOTIMER is a 32-bit counter that is capable of running in all energy modes. It can be clocked by either the 32.768 kHz crystal oscillator (LFXO), the 32.768 kHz RC oscillator (LFRCO), or the 1 kHz RC oscillator (ULFRCO). It can provide periodic Wakeup events and PRS signals which can be used to wake up peripherals from any energy mode. The CRYOTIMER provides a wide range of interrupt periods, facilitating flexible ultra-low energy operation.

### 3.6.5 Pulse Counter (PCNT)

The Pulse Counter (PCNT) peripheral can be used for counting pulses on a single input or to decode quadrature encoded inputs. The clock for PCNT is selectable from either an external source on pin PCTNn\_S0IN or from an internal timing reference, selectable from among any of the internal oscillators, except the AUXHFRCO. The module may operate in energy mode EM0 Active, EM1 Sleep, EM2 Deep Sleep, and EM3 Stop.

### 3.6.6 Watchdog Timer (WDOG)

The watchdog timer can act both as an independent watchdog or as a watchdog synchronous with the CPU clock. It has windowed monitoring capabilities, and can generate a reset or different interrupts depending on the failure mode of the system. The watchdog can also monitor autonomous systems driven by PRS.

## 3.7 Communications and Other Digital Peripherals

### 3.7.1 Universal Synchronous/Asynchronous Receiver/Transmitter (USART)

The Universal Synchronous/Asynchronous Receiver/Transmitter is a flexible serial I/O module. It supports full duplex asynchronous UART communication with hardware flow control as well as RS-485, SPI, MicroWire and 3-wire. It can also interface with devices supporting:

- ISO7816 SmartCards
- IrDA
- I<sup>2</sup>S

### 3.7.2 Low Energy Universal Asynchronous Receiver/Transmitter (LEUART)

The unique LEUART™ provides two-way UART communication on a strict power budget. Only a 32.768 kHz clock is needed to allow UART communication up to 9600 baud. The LEUART includes all necessary hardware to make asynchronous serial communication possible with a minimum of software intervention and energy consumption.

### 3.7.3 Inter-Integrated Circuit Interface (I<sup>2</sup>C)

The I<sup>2</sup>C module provides an interface between the MCU and a serial I<sup>2</sup>C bus. It is capable of acting as both a master and a slave and supports multi-master buses. Standard-mode, fast-mode and fast-mode plus speeds are supported, allowing transmission rates from 10 kbit/s up to 1 Mbit/s. Slave arbitration and timeouts are also available, allowing implementation of an SMBus-compliant system. The interface provided to software by the I<sup>2</sup>C module allows precise timing control of the transmission process and highly automated transfers. Automatic recognition of slave addresses is provided in active and low energy modes.

### 3.7.4 Peripheral Reflex System (PRS)

The Peripheral Reflex System provides a communication network between different peripheral modules without software involvement. Peripheral modules producing Reflex signals are called producers. The PRS routes Reflex signals from producers to consumer peripherals which in turn perform actions in response. Edge triggers and other functionality such as simple logic operations (AND, OR, NOT) can be applied by the PRS to the signals. The PRS allows peripheral to act autonomously without waking the MCU core, saving power.

## 3.8 Security Features

### 3.8.1 GPCRC (General Purpose Cyclic Redundancy Check)

The GPCRC module implements a Cyclic Redundancy Check (CRC) function. It supports both 32-bit and 16-bit polynomials. The supported 32-bit polynomial is 0x04C11DB7 (IEEE 802.3), while the 16-bit polynomial can be programmed to any value, depending on the needs of the application.

### 3.8.2 Crypto Accelerator (CRYPTO)

The Crypto Accelerator is a fast and energy-efficient autonomous hardware encryption and decryption accelerator. EFR32 devices support AES encryption and decryption with 128- or 256-bit keys, ECC over both GF(P) and GF(2<sup>m</sup>), SHA-1 and SHA-2 (SHA-224 and SHA-256).

Supported block cipher modes of operation for AES include: ECB, CTR, CBC, PCBC, CFB, OFB, GCM, CBC-MAC, GMAC and CCM.

Supported ECC NIST recommended curves include P-192, P-224, P-256, K-163, K-233, B-163 and B-233.

The CRYPTO block is tightly linked to the Radio Buffer Controller (BUFC) enabling fast and efficient autonomous cipher operations on data buffer content. It allows fast processing of GCM (AES), ECC and SHA with little CPU intervention.

CRYPTO also provides trigger signals for DMA read and write operations.

## 3.9 Analog

### 3.9.1 Analog Port (APORT)

The Analog Port (APORT) is an analog interconnect matrix allowing access to many analog modules on a flexible selection of pins. Each APORT bus consists of analog switches connected to a common wire. Since many clients can operate differentially, buses are grouped by X/Y pairs.

### 3.9.2 Analog Comparator (ACMP)

The Analog Comparator is used to compare the voltage of two analog inputs, with a digital output indicating which input voltage is higher. Inputs are selected from among internal references and external pins. The tradeoff between response time and current consumption is configurable by software. Two 6-bit reference dividers allow for a wide range of internally-programmable reference sources. The ACMP can also be used to monitor the supply voltage. An interrupt can be generated when the supply falls below or rises above the programmable threshold.

### 3.9.3 Analog to Digital Converter (ADC)

The ADC is a Successive Approximation Register (SAR) architecture, with a resolution of up to 12 bits at up to 1 Msps. The output sample resolution is configurable and additional resolution is possible using integrated hardware for averaging over multiple samples. The ADC includes integrated voltage references and an integrated temperature sensor. Inputs are selectable from a wide range of sources, including pins configurable as either single-ended or differential.

### 3.9.4 Digital to Analog Current Converter (IDAC)

The Digital to Analog Current Converter can source or sink a configurable constant current. This current can be driven on an output pin or routed to the selected ADC input pin for capacitive sensing. The full-scale current is programmable between 0.05  $\mu\text{A}$  and 64  $\mu\text{A}$  with several ranges consisting of various step sizes.

## 3.10 Reset Management Unit (RMU)

The RMU is responsible for handling reset of the EFR32BG1. A wide range of reset sources are available, including several power supply monitors, pin reset, software controlled reset, core lockup reset, and watchdog reset.

## 3.11 Core and Memory

### 3.11.1 Processor Core

The ARM Cortex-M processor includes a 32-bit RISC processor integrating the following features and tasks in the system:

- ARM Cortex-M4 RISC processor achieving 1.25 Dhrystone MIPS/MHz
- Memory Protection Unit (MPU) supporting up to 8 memory segments
- Up to 256 kB flash program memory
- Up to 32 kB RAM data memory
- Configuration and event handling of all modules
- 2-pin Serial-Wire debug interface

### 3.11.2 Memory System Controller (MSC)

The Memory System Controller (MSC) is the program memory unit of the microcontroller. The flash memory is readable and writable from both the Cortex-M and DMA. The flash memory is divided into two blocks; the main block and the information block. Program code is normally written to the main block, whereas the information block is available for special user data and flash lock bits. There is also a read-only page in the information block containing system and device calibration data. Read and write operations are supported in energy modes EM0 Active and EM1 Sleep.

### 3.11.3 Linked Direct Memory Access Controller (LDMA)

The Linked Direct Memory Access (LDMA) controller allows the system to perform memory operations independently of software. This reduces both energy consumption and software workload. The LDMA allows operations to be linked together and staged, enabling sophisticated operations to be implemented.

### 3.12 Memory Map

The EFR32BG1 memory map is shown in the figures below. RAM and flash sizes are for the largest memory configuration.

Figure 3.2. EFR32BG1 Memory Map — Core Peripherals and Code Space

Figure 3.3. EFR32BG1 Memory Map — Peripherals

### 3.13 Configuration Summary

The features of the EFR32BG1 are a subset of the feature set described in the device reference manual. The table below describes device specific implementation of the features. Remaining modules support full configuration.

Table 3.1. Configuration Summary

| Module | Configuration                 | Pin Connections                 |
|--------|-------------------------------|---------------------------------|
| USART0 | IrDA<br>SmartCard             | US0_TX, US0_RX, US0_CLK, US0_CS |
| USART1 | I <sup>2</sup> S<br>SmartCard | US1_TX, US1_RX, US1_CLK, US1_CS |
| TIMER0 | with DTI                      | TIM0_CC[2:0], TIM0_CDTI[2:0]    |
| TIMER1 |                               | TIM1_CC[3:0]                    |

## 4. Electrical Specifications

### 4.1 Electrical Characteristics

All electrical parameters in all tables are specified under the following conditions, unless stated otherwise:

- Typical values are based on  $T_{AMB}=25\text{ }^{\circ}\text{C}$  and  $V_{DD}=3.3\text{ V}$ , by production test and/or technology characterization.
- Radio performance numbers are measured in conducted mode, based on Silicon Laboratories reference designs using output power-specific external RF impedance-matching networks for interfacing to a  $50\text{ }\Omega$  antenna.
- Minimum and maximum values represent the worst conditions across supply voltage, process variation, and operating temperature, unless stated otherwise.

Refer to [4.1.2.1 General Operating Conditions](#) for more details about operational supply and temperature limits.

#### 4.1.1 Absolute Maximum Ratings

Stresses above those listed below may cause permanent damage to the device. This is a stress rating only and functional operation of the devices at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability. For more information on the available quality and reliability data, see the Quality and Reliability Monitor Report at <http://www.silabs.com/support/quality/pages/default.aspx>.

**Table 4.1. Absolute Maximum Ratings**

| Parameter                                                    | Symbol                  | Test Condition                         | Min  | Typ | Max                      | Unit        |
|--------------------------------------------------------------|-------------------------|----------------------------------------|------|-----|--------------------------|-------------|
| Storage temperature range                                    | T <sub>STG</sub>        |                                        | -50  | —   | 150                      | °C          |
| Voltage on any supply pin                                    | V <sub>DDMAX</sub>      |                                        | -0.3 | —   | 3.8                      | V           |
| Voltage ramp rate on any supply pin                          | V <sub>DDRAMP</sub> MAX |                                        | —    | —   | 1                        | V / $\mu$ s |
| DC voltage on any GPIO pin                                   | V <sub>DIGPIN</sub>     | 5V tolerant GPIO pins <sup>1 2 3</sup> | -0.3 | —   | Min of 5.25 and IOVDD +2 | V           |
|                                                              |                         | Standard GPIO pins                     | -0.3 | —   | IOVDD+0.3                | V           |
| Voltage on HFXO pins                                         | V <sub>HFXOPIN</sub>    |                                        | -0.3 | —   | 1.4                      | V           |
| Input RF level on pins 2G4RF_IOP and 2G4RF_ION               | P <sub>RFMAX2G4</sub>   |                                        | —    | —   | 10                       | dBm         |
| Voltage differential between RF pins (2G4RF_IOP - 2G4RF_ION) | V <sub>MAXDIFF2G4</sub> |                                        | -50  | —   | 50                       | mV          |
| Absolute voltage on RF pins 2G4RF_IOP and 2G4RF_ION          | V <sub>MAX2G4</sub>     |                                        | -0.3 | —   | 3.3                      | V           |
| Absolute voltage on Sub-GHz RF pins                          | V <sub>MAXSUBG</sub>    | Pins SUBGRF_OP and SUBGRF_ON           | -0.3 | —   | 3.3                      | V           |
|                                                              |                         | Pins SUBGRF_IP and SUBGRF_IN,          | -0.3 | —   | 0.3                      | V           |
| Total current into VDD power lines                           | I <sub>VDDMAX</sub>     | Source                                 | —    | —   | 200                      | mA          |
| Total current into VSS ground lines                          | I <sub>VSSMAX</sub>     | Sink                                   | —    | —   | 200                      | mA          |
| Current per I/O pin                                          | I <sub>IO</sub> MAX     | Sink                                   | —    | —   | 50                       | mA          |
|                                                              |                         | Source                                 | —    | —   | 50                       | mA          |
| Current for all I/O pins                                     | I <sub>IOALL</sub> MAX  | Sink                                   | —    | —   | 200                      | mA          |
|                                                              |                         | Source                                 | —    | —   | 200                      | mA          |
| Junction temperature                                         | T <sub>J</sub>          | -G grade devices                       | -40  | —   | 105                      | °C          |
|                                                              |                         | -I grade devices                       | -40  | —   | 125                      | °C          |

| Parameter | Symbol | Test Condition | Min | Typ | Max | Unit |
|-----------|--------|----------------|-----|-----|-----|------|
|-----------|--------|----------------|-----|-----|-----|------|

**Note:**

1. When a GPIO pin is routed to the analog module through the APORT, the maximum voltage = IOVDD.
2. Valid for IOVDD in valid operating range or when IOVDD is undriven (high-Z). If IOVDD is connected to a low-impedance source below the valid operating range (e.g. IOVDD shorted to VSS), the pin voltage maximum is IOVDD + 0.3 V, to avoid exceeding the maximum IO current specifications.
3. To operate above the IOVDD supply rail, over-voltage tolerance must be enabled according to the GPIO\_Px\_OVTDIS register. Pins with over-voltage tolerance disabled have the same limits as Standard GPIO.

#### 4.1.2 Operating Conditions

When assigning supply sources, the following requirements must be observed:

- VREGVDD must be greater than or equal to AVDD, DVDD, RFVDD, PAVDD and all IOVDD supplies.
- VREGVDD = AVDD
- DVDD  $\leq$  AVDD
- IOVDD  $\leq$  AVDD
- RFVDD  $\leq$  AVDD
- PAVDD  $\leq$  AVDD

## 4.1.2.1 General Operating Conditions

Table 4.2. General Operating Conditions

| Parameter                                                    | Symbol         | Test Condition                                      | Min  | Typ | Max           | Unit |
|--------------------------------------------------------------|----------------|-----------------------------------------------------|------|-----|---------------|------|
| Operating ambient temperature range <sup>5</sup>             | $T_A$          | -G temperature grade                                | -40  | 25  | 85            | °C   |
|                                                              |                | -I temperature grade                                | -40  | 25  | 125           | °C   |
| AVDD supply voltage <sup>2</sup>                             | $V_{AVDD}$     |                                                     | 1.85 | 3.3 | 3.8           | V    |
| VREGVDD operating supply voltage <sup>2 1</sup>              | $V_{VREGVDD}$  | DCDC in regulation                                  | 2.4  | 3.3 | 3.8           | V    |
|                                                              |                | DCDC in bypass, 50mA load                           | 1.85 | 3.3 | 3.8           | V    |
|                                                              |                | DCDC not in use. DVDD externally shorted to VREGVDD | 1.85 | 3.3 | 3.8           | V    |
| VREGVDD current                                              | $I_{VREGVDD}$  | DCDC in bypass, $T \leq 85^\circ\text{C}$           | —    | —   | 200           | mA   |
|                                                              |                | DCDC in bypass, $T > 85^\circ\text{C}$              | —    | —   | 100           | mA   |
| RFVDD operating supply voltage                               | $V_{RFVDD}$    |                                                     | 1.62 | —   | $V_{VREGVDD}$ | V    |
| DVDD operating supply voltage                                | $V_{DVDD}$     |                                                     | 1.62 | —   | $V_{VREGVDD}$ | V    |
| PAVDD operating supply voltage                               | $V_{PAVDD}$    |                                                     | 1.62 | —   | $V_{VREGVDD}$ | V    |
| IOVDD operating supply voltage                               | $V_{IOVDD}$    | All IOVDD pins                                      | 1.62 | —   | $V_{VREGVDD}$ | V    |
| DECOUPLE output capacitor <sup>3 4</sup>                     | $C_{DECOUPLE}$ |                                                     | 0.75 | 1.0 | 2.75          | μF   |
| Difference between AVDD and VREGVDD, $ABS(AVDD - VREGVDD)^2$ | $dV_{DD}$      |                                                     | —    | —   | 0.1           | V    |
| HFCORECLK frequency                                          | $f_{CORE}$     | MODE = WS0                                          | —    | —   | 26            | MHz  |
|                                                              |                | MODE = WS1                                          | —    | —   | 40            | MHz  |
| HFCLK frequency                                              | $f_{HFCLK}$    | MODE = WS0                                          | —    | —   | 26            | MHz  |
|                                                              |                | MODE = WS1                                          | —    | —   | 40            | MHz  |

**Note:**

1. The minimum voltage required in bypass mode is calculated using  $R_{BYP}$  from the DCDC specification table. Requirements for other loads can be calculated as  $V_{DVDD\_min} + I_{LOAD} * R_{BYP\_max}$ .
2. VREGVDD must be tied to AVDD. Both VREGVDD and AVDD minimum voltages must be satisfied for the part to operate.
3. The system designer should consult the characteristic specs of the capacitor used on DECOUPLE to ensure its capacitance value stays within the specified bounds across temperature and DC bias.
4. VSCALE0 to VSCALE2 voltage change transitions occur at a rate of 10 mV / usec for approximately 20 usec. During this transition, peak currents will be dependent on the value of the DECOUPLE output capacitor, from 35 mA (with a 1 μF capacitor) to 70 mA (with a 2.7 μF capacitor).
5. The maximum limit on  $T_A$  may be lower due to device self-heating, which depends on the power dissipation of the specific application.  $T_A (max) = T_J (max) - (THETA_{JA} \times PowerDissipation)$ . Refer to the Absolute Maximum Ratings table and the Thermal Characteristics table for  $T_J$  and  $THETA_{JA}$ .

### 4.1.3 Thermal Characteristics

**Table 4.3. Thermal Characteristics**

| Parameter                         | Symbol                    | Test Condition                    | Min | Typ  | Max | Unit |
|-----------------------------------|---------------------------|-----------------------------------|-----|------|-----|------|
| Thermal resistance, QFN48 Package | THETA <sub>JA_QFN48</sub> | 2-Layer PCB, Air velocity = 0 m/s | —   | 64.5 | —   | °C/W |
|                                   |                           | 2-Layer PCB, Air velocity = 1 m/s | —   | 51.6 | —   | °C/W |
|                                   |                           | 2-Layer PCB, Air velocity = 2 m/s | —   | 47.7 | —   | °C/W |
|                                   |                           | 4-Layer PCB, Air velocity = 0 m/s | —   | 26.2 | —   | °C/W |
|                                   |                           | 4-Layer PCB, Air velocity = 1 m/s | —   | 23.1 | —   | °C/W |
|                                   |                           | 4-Layer PCB, Air velocity = 2 m/s | —   | 22.1 | —   | °C/W |
| Thermal resistance, QFN32 Package | THETA <sub>JA_QFN32</sub> | 2-Layer PCB, Air velocity = 0 m/s | —   | 79   | —   | °C/W |
|                                   |                           | 2-Layer PCB, Air velocity = 1 m/s | —   | 62.2 | —   | °C/W |
|                                   |                           | 2-Layer PCB, Air velocity = 2 m/s | —   | 54.1 | —   | °C/W |
|                                   |                           | 4-Layer PCB, Air velocity = 0 m/s | —   | 32   | —   | °C/W |
|                                   |                           | 4-Layer PCB, Air velocity = 1 m/s | —   | 28.1 | —   | °C/W |
|                                   |                           | 4-Layer PCB, Air velocity = 2 m/s | —   | 26.9 | —   | °C/W |

#### 4.1.4 DC-DC Converter

Test conditions:  $L_{DCDC}=4.7\ \mu\text{H}$  (Murata LQH3NPN4R7MM0L),  $C_{DCDC}=1.0\ \mu\text{F}$  (Murata GRM188R71A105KA61D),  $V_{DCDC\_I}=3.3\ \text{V}$ ,  $V_{DCDC\_O}=1.8\ \text{V}$ ,  $I_{DCDC\_LOAD}=50\ \text{mA}$ , Heavy Drive configuration,  $F_{DCDC\_LN}=7\ \text{MHz}$ , unless otherwise indicated.

**Table 4.4. DC-DC Converter**

| Parameter                                      | Symbol        | Test Condition                                                                                                                                | Min  | Typ | Max                | Unit |
|------------------------------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------|------|-----|--------------------|------|
| Input voltage range                            | $V_{DCDC\_I}$ | Bypass mode, $I_{DCDC\_LOAD} = 50\ \text{mA}$                                                                                                 | 1.85 | —   | $V_{VREGVDD\_MAX}$ | V    |
|                                                |               | Low noise (LN) mode, 1.8 V output, $I_{DCDC\_LOAD} = 100\ \text{mA}$ , or Low power (LP) mode, 1.8 V output, $I_{DCDC\_LOAD} = 10\ \text{mA}$ | 2.4  | —   | $V_{VREGVDD\_MAX}$ | V    |
|                                                |               | Low noise (LN) mode, 1.8 V output, $I_{DCDC\_LOAD} = 200\ \text{mA}$                                                                          | 2.6  | —   | $V_{VREGVDD\_MAX}$ | V    |
| Output voltage programmable range <sup>1</sup> | $V_{DCDC\_O}$ |                                                                                                                                               | 1.8  | —   | $V_{VREGVDD}$      | V    |

| DC line regulation                             | $V_{REG}$     | Input changes between $V_{VREGVDD\_MAX}$ and 2.4 V                                                                                            | —    | 0.1 | —                  | %    |
| DC load regulation                             | $I_{REG}$     | Load changes between 0 mA and 100 mA in CCM mode                                                                                              | —    | 0.1 | —                  | %    |

| Parameter                     | Symbol          | Test Condition                                                                      | Min | Typ | Max | Unit          |
|-------------------------------|-----------------|-------------------------------------------------------------------------------------|-----|-----|-----|---------------|
| Max load current              | $I_{LOAD\_MAX}$ | Low noise (LN) mode, Heavy Drive <sup>2</sup> , $T \leq 85\text{ }^{\circ}\text{C}$ | —   | —   | 200 | mA            |
|                               |                 | Low noise (LN) mode, Heavy Drive <sup>2</sup> , $T > 85\text{ }^{\circ}\text{C}$    | —   | —   | 100 | mA            |
|                               |                 | Low noise (LN) mode, Medium Drive <sup>2</sup>                                      | —   | —   | 100 | mA            |
|                               |                 | Low noise (LN) mode, Light Drive <sup>2</sup>                                       | —   | —   | 50  | mA            |
|                               |                 | Low power (LP) mode, LPCMPBIAS <sup>3</sup> = 0                                     | —   | —   | 75  | $\mu\text{A}$ |
|                               |                 | Low power (LP) mode, LPCMPBIAS <sup>3</sup> = 3                                     | —   | —   | 10  | mA            |
| DCDC nominal output capacitor | $C_{DCDC}$      | 25% tolerance                                                                       | 1   | 1   | 4.7 | $\mu\text{F}$ |
| DCDC nominal output inductor  | $L_{DCDC}$      | 20% tolerance                                                                       | 4.7 | 4.7 | 4.7 | $\mu\text{H}$ |
| Resistance in Bypass mode     | $R_{BYP}$       |                                                                                     | —   | 1.2 | 2.5 | $\Omega$      |

**Note:**

1. Due to internal dropout, the DC-DC output will never be able to reach its input voltage,  $V_{VREGVDD}$ .
2. Drive levels are defined by configuration of the PFETCNT and NFETCNT registers. Light Drive: PFETCNT=NFETCNT=3; Medium Drive: PFETCNT=NFETCNT=7; Heavy Drive: PFETCNT=NFETCNT=15.
3. In the EMU\_DCDCMISCCTRL register.
4. LP mode controller is a hysteretic controller that maintains the output voltage within the specified limits.

## 4.1.5 Current Consumption

### 4.1.5.1 Current Consumption 3.3 V without DC-DC Converter

Unless otherwise indicated, typical conditions are: VREGVDD = AVDD = DVDD = RFVDD = PAVDD = 3.3 V. T = 25 °C. EMU\_PWRCFG\_PWRCFG=NODCDC. EMU\_DCDCCTRL\_DCDCMODE=BYPASS. Minimum and maximum values in this table represent the worst conditions across supply voltage and process variation at T = 25 °C.

**Table 4.5. Current Consumption 3.3 V without DC-DC Converter**

| Parameter                                                     | Symbol              | Test Condition                                                   | Min | Typ  | Max  | Unit   |
|---------------------------------------------------------------|---------------------|------------------------------------------------------------------|-----|------|------|--------|
| Current consumption in EM0 mode with all peripherals disabled | I <sub>ACTIVE</sub> | 38.4 MHz crystal, CPU running while loop from flash <sup>1</sup> | —   | 130  | —    | µA/MHz |

| Output power variation vs RF frequency at POUT <sub>MAX</sub> | POUT <sub>VAR_F</sub> | Over RF tuning frequency range                                                                                   | —    | 0.4  | —      | dB   |
| RF tuning frequency range                                     | F <sub>RANGE</sub>    |                                                                                                                  | 2400 | —    | 2483.5 | MHz  |

**Note:**

- Supported transmit power levels are determined by the ordering part number (OPN). Transmit power ratings for all devices covered in this datasheet can be found in the Max TX Power column of the Ordering Information Table.
- For Bluetooth, the Maximum TX power on Channel 2456 is limited to +15 dBm to comply with In-band Spurious emissions.

#### 4.1.9.2 RF Receiver General Characteristics for 2.4 GHz Band

Unless otherwise indicated, typical conditions are: T = 25 °C, VREGVDD = AVDD = IOVDD = 3.3 V, DVDD = RFVDD = PAVDD. RFVDD and PAVDD path is filtered using ferrites. Crystal frequency=38.4 MHz. RF center frequency 2.45 GHz.

**Table 4.13. RF Receiver General Characteristics for 2.4 GHz Band**

| Parameter                                                                 | Symbol                   | Test Condition                            | Min  | Typ   | Max    | Unit |

|                                                                           |                          | 250 kbps 2GFSK signal                     | —    | -99.1 | —      | dBm  |

**Note:**

1. Channel at 2420 MHz will have degraded sensitivity. Sensitivity could be as high as -83 dBm on this channel.
2. RFSENSE performance is only valid from 0 to 85 °C. RFSENSE should be disabled outside this temperature range.

**4.1.9.3 RF Transmitter Characteristics for Bluetooth Low Energy in the 2.4GHz Band, 1 Mbps Data Rate**

Unless otherwise indicated, typical conditions are: T = 25 °C, VREGVDD = AVDD = IOVDD = 3.3 V, DVDD = RFVDD = PAVDD. RFVDD and PAVDD path is filtered using ferrites. Crystal frequency=38.4MHz. RF center frequency 2.45 GHz. Maximum duty cycle of 85%.

|                                                                                                                                                                              |                         | 1-12 GHz                                                                                                                           | —   | -36   | —   | dBm          |

**Note:**

1. For 2456 MHz, a maximum output power of 15 dBm is used to achieve this value.
2. For 2480 MHz, a maximum duty cycle of 20% is used to achieve this value.
3. Per Bluetooth Core\_5.0, Vol.6 Part A, Section 3.2.2, exceptions are allowed in up to three bands of 1 MHz width, centered on a frequency which is an integer multiple of 1 MHz. These exceptions shall have an absolute value of -20 dBm or less.

**4.1.9.4 RF Receiver Characteristics for Bluetooth Low Energy in the 2.4GHz Band, 1 Mbps Data Rate**

**Note:**

1. Reference packet is defined as 20 octet PSDU, modulated according to 802.15.4-2011 DSSS-OQPSK in the 2.4GHz band, with pseudo-random packet data content.
2. Specified at maximum power output level of 10 dBm.
3. For 2415 MHz, a maximum duty cycle of 50% is used to achieve this value.
4. For 2480 MHz, a maximum duty cycle of 20% is used to achieve this value.
5. Typical EVM for the 2415 MHz channel is 7.9%.

**4.1.9.6 RF Receiver Characteristics for 802.15.4 DSSS-OQPSK in the 2.4 GHz Band**

Unless otherwise indicated, typical conditions are: T = 25 °C, VREGVDD = AVDD = IOVDD = 3.3 V, DVDD = RFVDD = PAVDD. RFVDD and PAVDD path is filtered using ferrites. Crystal frequency=38.4 MHz. RF center frequency 2.45 GHz.

**Table 4.17. RF Receiver Characteristics for 802.15.4 DSSS-OQPSK in the 2.4 GHz Band**

| Parameter                                                                                                                                                            | Symbol                  | Test Condition                                                                    | Min | Typ   | Max | Unit |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|-----------------------------------------------------------------------------------|-----|-------|-----|------|
| Max usable receiver input level, 1% PER                                                                                                                              | SAT                     | Signal is reference signal <sup>5</sup> . Packet length is 20 octets.             | —   | 10    | —   | dBm  |
| Sensitivity, 1% PER <sup>2</sup>                                                                                                                                     | SENS                    | Signal is reference signal. Packet length is 20 octets. Using DC-DC converter.    | —   | -99   | —   | dBm  |
|                                                                                                                                                                      |                         | Signal is reference signal. Packet length is 20 octets. Without DC-DC converter.  | —   | -99   | —   | dBm  |
| Co-channel interferer rejection, 1% PER                                                                                                                              | CCR                     | Desired signal 3 dB above sensitivity limit                                       | —   | -2.6  | —   | dB   |
| High-side adjacent channel rejection, 1% PER. Desired is reference signal at 3dB above reference sensitivity level <sup>6</sup>                                      | ACR <sub>P1</sub>       | Interferer is reference signal at +1 channel-spacing.                             | —   | 33.75 | —   | dB   |
|                                                                                                                                                                      |                         | Interferer is filtered reference signal <sup>3</sup> at +1 channel-spacing.       | —   | 52.2  | —   | dB   |
|                                                                                                                                                                      |                         | Interferer is CW at +1 channel-spacing <sup>4</sup> .                             | —   | 58.6  | —   | dB   |
| Low-side adjacent channel rejection, 1% PER. Desired is reference signal at 3dB above reference sensitivity level <sup>6</sup>                                       | ACR <sub>M1</sub>       | Interferer is reference signal at -1 channel-spacing.                             | —   | 35    | —   | dB   |
|                                                                                                                                                                      |                         | Interferer is filtered reference signal <sup>3</sup> at -1 channel-spacing.       | —   | 54.7  | —   | dB   |

|                                                                                                                                                                      |                         | Interferer frequency > Desired frequency + 3 channel-spacing                      | —   | 57.9  | —   | dB   |
| Blocking rejection of 802.11g signal centered at +12MHz or -13MHz <sup>1</sup>                                                                                       | BLOCK <sub>80211G</sub> | Desired is reference signal at 6dB above reference sensitivity level <sup>6</sup> | —   | 51.6  | —   | dB   |

| Parameter                                                                 | Symbol              | Test Condition                                  | Min | Typ  | Max | Unit |
|---------------------------------------------------------------------------|---------------------|-------------------------------------------------|-----|------|-----|------|
| Upper limit of input power range over which RSSI resolution is maintained | RSSI <sub>MAX</sub> |                                                 | —   | —    | 5   | dBm  |
| Lower limit of input power range over which RSSI resolution is maintained | RSSI <sub>MIN</sub> |                                                 | -98 | —    | —   | dBm  |
| RSSI resolution                                                           | RSSI <sub>RES</sub> | over RSSI <sub>MIN</sub> to RSSI <sub>MAX</sub> | —   | 0.25 | —   | dB   |
| RSSI accuracy in the linear region as defined by 802.15.4-2003            | RSSI <sub>LIN</sub> |                                                 | —   | +/-1 | —   | dB   |

**Note:**

1. This is an IEEE 802.11b/g ERP-PBCC 22 MBit/s signal as defined by the IEEE 802.11 specification and IEEE 802.11g addendum.
2. Receive sensitivity on 802.15.4 channel 14 is -98 dBm
3. Filter is characterized as a symmetric bandpass centered on the adjacent channel having a 3dB bandwidth of 4.6 MHz and stop-band rejection better than 26 dB beyond 3.15 MHz from the adjacent carrier.
4. Due to low-IF frequency, there is some overlap of adjacent channel and image channel bands. Adjacent channel CW blocker tests place the Interferer center frequency at the Desired frequency  $\pm$  5 MHz on the channel raster, whereas the image rejection test places the CW interferer near the image frequency of the Desired signal carrier, regardless of the channel raster.
5. Reference signal is defined as O-QPSK DSSS per 802.15.4, Frequency range = 2400-2483.5 MHz, Symbol rate = 62.5 ksym-bols/s.
6. Reference sensitivity level is -85 dBm.

#### 4.1.10 Sub-GHz RF Transceiver Characteristics

**4.1.10.1 Sub-GHz RF Transmitter characteristics for 915 MHz Band**

Unless otherwise indicated, typical conditions are: T = 25 °C, VREGVDD = AVDD = IOVDD = 3.3 V, DVDD = RFVDD = PAVDD. RFVDD and PAVDD path is filtered using ferrites. Crystal frequency=38.4 MHz. RF center frequency 915 MHz.

**Table 4.18. Sub-GHz RF Transmitter characteristics for 915 MHz Band**

| Parameter                                                                                                                          | Symbol                      | Test Condition                                                                      | Min  | Typ   | Max  | Unit |

**Note:**

- Supported transmit power levels are determined by the ordering part number (OPN). Transmit power ratings for all devices covered in this datasheet can be found in the Max TX Power column of the Ordering Information Table.

**4.1.10.2 Sub-GHz RF Receiver Characteristics for 915 MHz Band**

Unless otherwise indicated, typical conditions are: T = 25 °C, VREGVDD = AVDD = IOVDD = 3.3 V, DVDD = RFVDD = PAVDD. RFVDD and PAVDD path is filtered using ferrites. Crystal frequency=38.4 MHz. RF center frequency 915 MHz.

**Table 4.19. Sub-GHz RF Receiver Characteristics for 915 MHz Band**

| Parameter                                               | Symbol                   | Test Condition                                                               | Min | Typ    | Max    | Unit |

**Note:**

- Supported transmit power levels are determined by the ordering part number (OPN). Transmit power ratings for all devices covered in this datasheet can be found in the Max TX Power column of the Ordering Information Table.

**4.1.10.6 Sub-GHz RF Receiver Characteristics for 490 MHz Band**

Unless otherwise indicated, typical conditions are: T = 25 °C, VREGVDD = AVDD = IOVDD = 3.3 V, DVDD = RFVDD = PAVDD. RFVDD and PAVDD path is filtered using ferrites. Crystal frequency=38.4 MHz. RF center frequency 490 MHz.

**Table 4.23. Sub-GHz RF Receiver Characteristics for 490 MHz Band**

| Parameter                                                                | Symbol                   | Test Condition                                                                        | Min  | Typ    | Max    | Unit |

**Note:**

- Supported transmit power levels are determined by the ordering part number (OPN). Transmit power ratings for all devices covered in this datasheet can be found in the Max TX Power column of the Ordering Information Table.

**4.1.10.8 Sub-GHz RF Receiver Characteristics for 433 MHz Band**

Unless otherwise indicated, typical conditions are: T = 25 °C, VREGVDD = AVDD = IOVDD = 3.3 V, DVDD = RFVDD = PAVDD. RFVDD and PAVDD path is filtered using ferrites. Crystal frequency=38.4 MHz. RF center frequency 433 MHz.

**Table 4.25. Sub-GHz RF Receiver Characteristics for 433 MHz Band**

| Parameter                                               | Symbol                   | Test Condition                                                               | Min | Typ    | Max    | Unit |

| Parameter                                                                                                    | Symbol                 | Test Condition                                        | Min  | Typ   | Max | Unit |
|--------------------------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------|------|-------|-----|------|
| Blocking selectivity, 0.1% BER. Desired is 2.4 kbps GFSK signal <sup>1</sup> at 3 dB above sensitivity level | C/I <sub>BLOCKER</sub> | Interferer CW at Desired $\pm 1$ MHz                  | —    | 74.2  | —   | dB   |
|                                                                                                              |                        | Interferer CW at Desired $\pm 2$ MHz                  | 68.7 | 76    | —   | dB   |
|                                                                                                              |                        | Interferer CW at Desired $\pm 10$ MHz                 | 80   | 90.6  | —   | dB   |
| Upper limit of input power range over which RSSI resolution is maintained                                    | RSSI <sub>MAX</sub>    |                                                       | —    | —     | 5   | dBm  |
| Lower limit of input power range over which RSSI resolution is maintained                                    | RSSI <sub>MIN</sub>    |                                                       | -98  | —     | —   | dBm  |
| RSSI resolution                                                                                              | RSSI <sub>RES</sub>    | Over RSSI <sub>MIN</sub> to RSSI <sub>MAX</sub> range | —    | 0.25  | —   | dBm  |
| Max spurious emissions during active receive mode                                                            | SPUR <sub>RX</sub>     | 30 MHz to 1 GHz                                       | —    | -83.7 | -63 | dBm  |
|                                                                                                              |                        | 1 GHz to 12 GHz                                       | —    | -58.8 | -50 | dBm  |

**Note:**

1. Definition of reference signal is 2.4 kbps 2GFSK, BT=0.5,  $\Delta f = 1.2$  kHz, RX channel BW = 5.05 kHz, channel spacing = 12.5 kHz.
2. Definition of reference signal is 38.4 kbps 2GFSK, BT=0.5,  $\Delta f = 20$  kHz, RX channel BW = 84.16 kHz, channel spacing = 100 kHz.
3. Definition of reference signal is 500 kbps 2GFSK, BT=0.5,  $\Delta f = 125$  kHz, RX channel BW = 841.6 kHz.
4. RFSense performance is only valid from 0 to 85 °C. RFSense should be disabled outside this temperature range.

**4.1.11 Modem****Table 4.30. Modem**

| Parameter            | Symbol              | Test Condition                                                      | Min | Typ | Max  | Unit        |
|----------------------|---------------------|---------------------------------------------------------------------|-----|-----|------|-------------|
| Receive bandwidth    | BW <sub>RX</sub>    | Configurable range with 38.4 MHz crystal                            | 0.1 | —   | 2530 | kHz         |
| IF frequency         | f <sub>IF</sub>     | Configurable range with 38.4 MHz crystal. Selected steps available. | 150 | —   | 1371 | kHz         |
| DSSS symbol length   | SL <sub>DSSS</sub>  | Configurable in steps of 1 chip                                     | 2   | —   | 32   | chips       |
| DSSS bits per symbol | BPS <sub>DSSS</sub> | Configurable                                                        | 1   | —   | 4    | bits/symbol |

## 4.1.12 Oscillators

### 4.1.12.1 Low-Frequency Crystal Oscillator (LFXO)

**Table 4.31. Low-Frequency Crystal Oscillator (LFXO)**

| Parameter                                                | Symbol                     | Test Condition                                                                   | Min | Typ    | Max | Unit       |
|----------------------------------------------------------|----------------------------|----------------------------------------------------------------------------------|-----|--------|-----|------------|
| Crystal frequency                                        | $f_{\text{LFXO}}$          |                                                                                  | —   | 32.768 | —   | kHz        |
| Supported crystal equivalent series resistance (ESR)     | $\text{ESR}_{\text{LFXO}}$ |                                                                                  | —   | —      | 70  | k $\Omega$ |
| Supported range of crystal load capacitance <sup>1</sup> | $C_{\text{LFXO\_CL}}$      |                                                                                  | 6   | —      | 18  | pF         |
| On-chip tuning cap range <sup>2</sup>                    | $C_{\text{LFXO\_T}}$       | On each of LFX TAL_N and LFX TAL_P pins                                          | 8   | —      | 40  | pF         |
| On-chip tuning cap step size                             | $\text{SS}_{\text{LFXO}}$  |                                                                                  | —   | 0.25   | —   | pF         |
| Current consumption after startup <sup>3</sup>           | $I_{\text{LFXO}}$          | ESR = 70 k $\Omega$ m, $C_L$ = 7 pF, GAIN <sup>4</sup> = 2, AGC <sup>4</sup> = 1 | —   | 273    | —   | nA         |
| Start- up time                                           | $t_{\text{LFXO}}$          | ESR = 70 k $\Omega$ m, $C_L$ = 7 pF, GAIN <sup>4</sup> = 2                       | —   | 308    | —   | ms         |

**Note:**

1. Total load capacitance as seen by the crystal.
2. The effective load capacitance seen by the crystal will be  $C_{\text{LFXO\_T}}/2$ . This is because each XTAL pin has a tuning cap and the two caps will be seen in series by the crystal.
3. Block is supplied by AVDD if ANASW = 0, or DVDD if ANASW=1 in EMU\_PWRCTRL register.
4. In CMU\_LFXOCTRL register.

## 4.1.12.2 High-Frequency Crystal Oscillator (HFXO)

Table 4.32. High-Frequency Crystal Oscillator (HFXO)

| Parameter                                                | Symbol                                 | Test Condition                                    | Min | Typ  | Max | Unit          |
|----------------------------------------------------------|----------------------------------------|---------------------------------------------------|-----|------|-----|---------------|
| Crystal frequency                                        | $f_{\text{HFXO}}$                      | 38.4 MHz required for radio transceiver operation | 38  | 38.4 | 40  | MHz           |
| Supported crystal equivalent series resistance (ESR)     | $\text{ESR}_{\text{HFXO}_38\text{M4}}$ | Crystal frequency 38.4 MHz                        | —   | —    | 60  | $\Omega$      |
| Supported range of crystal load capacitance <sup>1</sup> | $C_{\text{HFXO\_CL}}$                  |                                                   | 6   | —    | 12  | pF            |
| On-chip tuning cap range <sup>2</sup>                    | $C_{\text{HFXO\_T}}$                   | On each of HFXTAL_N and HFXTAL_P pins             | 9   | 20   | 25  | pF            |
| On-chip tuning capacitance step                          | $\text{SS}_{\text{HFXO}}$              |                                                   | —   | 0.04 | —   | pF            |
| Startup time                                             | $t_{\text{HFXO}}$                      | 38.4 MHz, ESR = 50 Ohm, $C_L$ = 10 pF             | —   | 300  | —   | $\mu\text{s}$ |
| Frequency tolerance for the crystal                      | $\text{FT}_{\text{HFXO}}$              | 38.4 MHz, ESR = 50 Ohm, $C_L$ = 10 pF             | -40 | —    | 40  | ppm           |

**Note:**

1. Total load capacitance as seen by the crystal.
2. The effective load capacitance seen by the crystal will be  $C_{\text{HFXO\_T}}/2$ . This is because each XTAL pin has a tuning cap and the two caps will be seen in series by the crystal.

## 4.1.12.3 Low-Frequency RC Oscillator (LFRCO)

Table 4.33. Low-Frequency RC Oscillator (LFRCO)

| Parameter                        | Symbol             | Test Condition                                 | Min    | Typ    | Max    | Unit          |
|----------------------------------|--------------------|------------------------------------------------|--------|--------|--------|---------------|
| Oscillation frequency            | $f_{\text{LFRCO}}$ | $\text{ENVREF}^2 = 1$                          | 30.474 | 32.768 | 34.243 | kHz           |
|                                  |                    | $\text{ENVREF}^2 = 1$ , $T > 85^\circ\text{C}$ | 30.474 | —      | 39.7   | kHz           |
|                                  |                    | $\text{ENVREF}^2 = 0$                          | 30.474 | 32.768 | 33.915 | kHz           |
| Startup time                     | $t_{\text{LFRCO}}$ |                                                | —      | 500    | —      | $\mu\text{s}$ |
| Current consumption <sup>1</sup> | $I_{\text{LFRCO}}$ | $\text{ENVREF} = 1$ in CMU_LFRCTRL             | —      | 342    | —      | nA            |
|                                  |                    | $\text{ENVREF} = 0$ in CMU_LFRCTRL             | —      | 494    | —      | nA            |

**Note:**

1. Block is supplied by AVDD if ANASW = 0, or DVDD if ANASW=1 in EMU\_PWRCTRL register.
2. In CMU\_LFRCTRL register.

## 4.1.12.4 High-Frequency RC Oscillator (HFRCO)

Table 4.34. High-Frequency RC Oscillator (HFRCO)

| Parameter                           | Symbol                      | Test Condition                                                              | Min  | Typ | Max | Unit          |
|-------------------------------------|-----------------------------|-----------------------------------------------------------------------------|------|-----|-----|---------------|
| Frequency accuracy                  | $f_{\text{HFRCO\_ACC}}$     | At production calibrated frequencies, across supply voltage and temperature | -2.5 | —   | 2.5 | %             |
| Start-up time                       | $t_{\text{HFRCO}}$          | $f_{\text{HFRCO}} \geq 19 \text{ MHz}$                                      | —    | 300 | —   | ns            |

## 4.1.12.6 Ultra-low Frequency RC Oscillator (ULFRCO)

Table 4.36. Ultra-low Frequency RC Oscillator (ULFRCO)

| Parameter             | Symbol              | Test Condition | Min  | Typ | Max  | Unit |
|-----------------------|---------------------|----------------|------|-----|------|------|
| Oscillation frequency | $f_{\text{ULFRCO}}$ |                | 0.95 | 1   | 1.07 | kHz  |

4.1.13 Flash Memory Characteristics<sup>5</sup>Table 4.37. Flash Memory Characteristics<sup>5</sup>

| Parameter                         | Symbol               | Test Condition                                | Min   | Typ | Max | Unit   |
|-----------------------------------|----------------------|-----------------------------------------------|-------|-----|-----|--------|
| Flash erase cycles before failure | EC <sub>FLASH</sub>  |                                               | 10000 | —   | —   | cycles |
| Flash data retention              | RET <sub>FLASH</sub> | T ≤ 85 °C                                     | 10    | —   | —   | years  |
|                                   |                      | T ≤ 125 °C                                    | 10    | —   | —   | years  |
| Word (32-bit) programming time    | t <sub>W_PROG</sub>  | Burst write, 128 words, average time per word | 20    | 26  | 40  | μs     |
|                                   |                      | Single word                                   | 57    | 68  | 82  | μs     |
| Page erase time <sup>4</sup>      | t <sub>PERASE</sub>  |                                               | 20    | 27  | 40  | ms     |
| Mass erase time <sup>1</sup>      | t <sub>MERASE</sub>  |                                               | 20    | 27  | 40  | ms     |
| Device erase time <sup>2 3</sup>  | t <sub>DERASE</sub>  | T ≤ 85 °C                                     | —     | 60  | 74  | ms     |
|                                   |                      | T ≤ 125 °C                                    | —     | 60  | 78  | ms     |
| Erase current <sup>6</sup>        | I <sub>ERASE</sub>   | Page Erase                                    | —     | —   | 3   | mA     |
|                                   |                      | Mass or Device Erase                          | —     | —   | 5   | mA     |
| Write current <sup>6</sup>        | I <sub>WRITE</sub>   |                                               | —     | —   | 3   | mA     |

**Note:**

1. Mass erase is issued by the CPU and erases all flash.
2. Device erase is issued over the AAP interface and erases all flash, SRAM, the Lock Bit (LB) page, and the User data page Lock Word (ULW).
3. From setting the DEVICEERASE bit in AAP\_CMD to 1 until the ERASEBUSY bit in AAP\_STATUS is cleared to 0. Internal setup and hold times for flash control signals are included.
4. From setting the ERASEPAGE bit in MSC\_WRITECMD to 1 until the BUSY bit in MSC\_STATUS is cleared to 0. Internal setup and hold times for flash control signals are included.
5. Flash data retention information is published in the Quarterly Quality and Reliability Report.
6. Measured at 25 °C.

## 4.1.14 General-Purpose I/O (GPIO)

Table 4.38. General-Purpose I/O (GPIO)

| Parameter                                                      | Symbol          | Test Condition                                                             | Min               | Typ | Max               | Unit       |

**Note:**

- Derived from ADCCLK.
- PSRR is referenced to AVDD when ANASW=0 and to DVDD when ANASW=1 in EMU\_PWRCTRL.
- In ADCn\_BIASPROG register.
- In ADCn\_CNTL register.
- The absolute voltage allowed at any ADC input is dictated by the power rail supplied to on-chip circuitry, and may be lower than the effective full scale voltage. All ADC inputs are limited to the ADC supply (AVDD or DVDD depending on EMU\_PWRCTRL\_ANASW). Any ADC input routed through the APORT will further be limited by the IOVDD supply to the pin.
- External reference is 1.25 V applied externally to ADCnEXTREFP, with the selection CONF in the SINGLECTRL\_REF or SCANCTRL\_REF register field and VREFP in the SINGLECTRLX\_VREFSEL or SCANCTRLX\_VREFSEL field. The differential input range with this configuration is  $\pm 1.25\text{ V}$ .
- Internal reference option used corresponds to selection 2V5 in the SINGLECTRL\_REF or SCANCTRL\_REF register field. The differential input range with this configuration is  $\pm 1.25\text{ V}$ . Typical value is characterized using full-scale sine wave input. Minimum value is production-tested using sine wave input at 1.5 dB lower than full scale.

## 4.1.17 Analog Comparator (ACMP)

Table 4.41. Analog Comparator (ACMP)

| Parameter                                                                         | Symbol         | Test Condition                                              | Min   | Typ | Max                | Unit |

**Note:**

1. ACMPVDD is a supply chosen by the setting in ACMPn\_CTRL\_PWRSEL and may be IOVDD, AVDD or DVDD.
2. The total ACMP current is the sum of the contributions from the ACMP and its internal voltage reference.  $I_{ACMPTOTAL} = I_{ACMP} + I_{ACMPREF}$ .
3. ± 100 mV differential drive.
4. In ACMPn\_CTRL register.
5. In ACMPn\_HYSTERESIS registers.
6. In ACMPn\_INPUTSEL register.

## 4.1.18 Current Digital to Analog Converter (IDAC)

|                                                                                                    |                    | RANGESEL1=2, output voltage = $\min(V_{IOVDD}, V_{AVDD}^2 - 150 \text{ mV})$         | —   | 0.02 | —   | %       |
|                                                                                                    |                    | RANGESEL1=3, output voltage = $\min(V_{IOVDD}, V_{AVDD}^2 - 250 \text{ mV})$         | —   | 0.02 | —   | %       |
| Output voltage compliance in sink mode, sink current change relative to current sunk at IOVDD      | $I_{COMP\_SINK}$   | RANGESEL1=0, output voltage = 100 mV                                                 | —   | 0.18 | —   | %       |
|                                                                                                    |                    | RANGESEL1=1, output voltage = 100 mV                                                 | —   | 0.12 | —   | %       |
|                                                                                                    |                    | RANGESEL1=2, output voltage = 150 mV                                                 | —   | 0.08 | —   | %       |
|                                                                                                    |                    | RANGESEL1=3, output voltage = 250 mV                                                 | —   | 0.02 | —   | %       |

**Note:**

1. In IDAC\_CURPROG register.
2. The IDAC is supplied by either AVDD, DVDD, or IOVDD based on the setting of ANASW in the EMU\_PWRCTRL register and PWRSEL in the IDAC\_CTRL register. Setting PWRSEL to 1 selects IOVDD. With PWRSEL cleared to 0, ANASW selects between AVDD (0) and DVDD (1).

#### 4.1.19 Pulse Counter (PCNT)

**Table 4.43. Pulse Counter (PCNT)**

| Parameter       | Symbol   | Test Condition                               | Min | Typ | Max | Unit |
|-----------------|----------|----------------------------------------------|-----|-----|-----|------|
| Input frequency | $F_{IN}$ | Asynchronous Single and Quadrature Modes     | —   | —   | 10  | MHz  |
|                 |          | Sampled Modes with Debounce filter set to 0. | —   | —   | 8   | kHz  |

#### 4.1.20 I2C

##### 4.1.20.1 I2C Standard-mode (Sm)<sup>1</sup>

**Table 4.44. I2C Standard-mode (Sm)<sup>1</sup>**

| Parameter                                        | Symbol        | Test Condition | Min | Typ | Max  | Unit    |
|--------------------------------------------------|---------------|----------------|-----|-----|------|---------|
| SCL clock frequency <sup>2</sup>                 | $f_{SCL}$     |                | 0   | —   | 100  | kHz     |
| SCL clock low time                               | $t_{LOW}$     |                | 4.7 | —   | —    | $\mu$ s |
| SCL clock high time                              | $t_{HIGH}$    |                | 4   | —   | —    | $\mu$ s |
| SDA set-up time                                  | $t_{SU\_DAT}$ |                | 250 | —   | —    | ns      |
| SDA hold time <sup>3</sup>                       | $t_{HD\_DAT}$ |                | 100 | —   | 3450 | ns      |
| Repeated START condition set-up time             | $t_{SU\_STA}$ |                | 4.7 | —   | —    | $\mu$ s |
| (Repeated) START condition hold time             | $t_{HD\_STA}$ |                | 4   | —   | —    | $\mu$ s |
| STOP condition set-up time                       | $t_{SU\_STO}$ |                | 4   | —   | —    | $\mu$ s |
| Bus free time between a STOP and START condition | $t_{BUF}$     |                | 4.7 | —   | —    | $\mu$ s |

**Note:**

1. For CLHR set to 0 in the I2Cn\_CTRL register.
2. For the minimum HPERCLK frequency required in Standard-mode, refer to the I2C chapter in the reference manual.
3. The maximum SDA hold time ( $t_{HD\_DAT}$ ) needs to be met only when the device does not stretch the low time of SCL ( $t_{LOW}$ ).

4.1.20.2 I2C Fast-mode (Fm)<sup>1</sup>Table 4.45. I2C Fast-mode (Fm)<sup>1</sup>

| Parameter                                        | Symbol              | Test Condition | Min | Typ | Max | Unit |
|--------------------------------------------------|---------------------|----------------|-----|-----|-----|------|
| SCL clock frequency <sup>2</sup>                 | f <sub>SCL</sub>    |                | 0   | —   | 400 | kHz  |
| SCL clock low time                               | t <sub>LOW</sub>    |                | 1.3 | —   | —   | μs   |
| SCL clock high time                              | t <sub>HIGH</sub>   |                | 0.6 | —   | —   | μs   |
| SDA set-up time                                  | t <sub>SU_DAT</sub> |                | 100 | —   | —   | ns   |
| SDA hold time <sup>3</sup>                       | t <sub>HD_DAT</sub> |                | 100 | —   | 900 | ns   |
| Repeated START condition set-up time             | t <sub>SU_STA</sub> |                | 0.6 | —   | —   | μs   |
| (Repeated) START condition hold time             | t <sub>HD_STA</sub> |                | 0.6 | —   | —   | μs   |
| STOP condition set-up time                       | t <sub>SU_STO</sub> |                | 0.6 | —   | —   | μs   |
| Bus free time between a STOP and START condition | t <sub>BUF</sub>    |                | 1.3 | —   | —   | μs   |

**Note:**

1. For CLHR set to 1 in the I2Cn\_CTRL register.
2. For the minimum HPERCLK frequency required in Fast-mode, refer to the I2C chapter in the reference manual.
3. The maximum SDA hold time (t<sub>HD,DAT</sub>) needs to be met only when the device does not stretch the low time of SCL (t<sub>LOW</sub>).

## 4.1.20.3 I2C Fast-mode Plus (Fm+)¹

Table 4.46. I2C Fast-mode Plus (Fm+)¹

| Parameter                                        | Symbol              | Test Condition | Min  | Typ | Max  | Unit |
|--------------------------------------------------|---------------------|----------------|------|-----|------|------|
| SCL clock frequency²                             | f <sub>SCL</sub>    |                | 0    | —   | 1000 | kHz  |
| SCL clock low time                               | t <sub>LOW</sub>    |                | 0.5  | —   | —    | µs   |
| SCL clock high time                              | t <sub>HIGH</sub>   |                | 0.26 | —   | —    | µs   |
| SDA set-up time                                  | t <sub>SU_DAT</sub> |                | 50   | —   | —    | ns   |
| SDA hold time                                    | t <sub>HD_DAT</sub> |                | 100  | —   | —    | ns   |
| Repeated START condition set-up time             | t <sub>SU_STA</sub> |                | 0.26 | —   | —    | µs   |
| (Repeated) START condition hold time             | t <sub>HD_STA</sub> |                | 0.26 | —   | —    | µs   |
| STOP condition set-up time                       | t <sub>SU_STO</sub> |                | 0.26 | —   | —    | µs   |
| Bus free time between a STOP and START condition | t <sub>BUF</sub>    |                | 0.5  | —   | —    | µs   |

**Note:**

1. For CLHR set to 0 or 1 in the I2Cn\_CTRL register.
2. For the minimum HPERCLK frequency required in Fast-mode Plus, refer to the I2C chapter in the reference manual.

## 4.1.21 USART SPI

## SPI Master Timing

Table 4.47. SPI Master Timing

| Parameter                      | Symbol                | Test Condition | Min                      | Typ | Max | Unit |
|--------------------------------|-----------------------|----------------|--------------------------|-----|-----|------|
| SCLK period <sup>1 3 2</sup>   | $t_{\text{SCLK}}$     |                | $2 * t_{\text{HFERCLK}}$ | —   | —   | ns   |
| CS to MOSI <sup>1 3</sup>      | $t_{\text{CS\_MO}}$   |                | -9                       | —   | 10  | ns   |
| SCLK to MOSI <sup>1 3</sup>    | $t_{\text{SCLK\_MO}}$ |                | -6                       | —   | 6.5 | ns   |
| MISO setup time <sup>1 3</sup> | $t_{\text{SU\_MI}}$   | IOVDD = 1.62 V | 60                       | —   | —   | ns   |
|                                |                       | IOVDD = 3.0 V  | 40                       | —   | —   | ns   |
| MISO hold time <sup>1 3</sup>  | $t_{\text{H\_MI}}$    |                | -13                      | —   | —   | ns   |

**Note:**

1. Applies for both CLKPHA = 0 and CLKPHA = 1 (figure only shows CLKPHA = 0).
2.  $t_{\text{HFERCLK}}$  is one period of the selected HFERCLK.
3. Measurement done with 8 pF output loading at 10% and 90% of  $V_{\text{DD}}$  (figure shows 50% of  $V_{\text{DD}}$ ).

Figure 4.1. SPI Master Timing Diagram

## SPI Slave Timing

Table 4.48. SPI Slave Timing

| Parameter                         | Symbol                   | Test Condition | Min                                | Typ | Max                                | Unit |
|-----------------------------------|--------------------------|----------------|------------------------------------|-----|------------------------------------|------|
| SCLK period <sup>1 3 2</sup>      | $t_{\text{SCLK}}$        |                | 6 *<br>$t_{\text{HFERCLK}}$        | —   | —                                  | ns   |
| SCLK high time <sup>1 3 2</sup>   | $t_{\text{SCLK\_HI}}$    |                | 2.5 *<br>$t_{\text{HFERCLK}}$      | —   | —                                  | ns   |
| SCLK low time <sup>1 3 2</sup>    | $t_{\text{SCLK\_LO}}$    |                | 2.5 *<br>$t_{\text{HFERCLK}}$      | —   | —                                  | ns   |
| CS active to MISO <sup>1 3</sup>  | $t_{\text{CS\_ACT\_MI}}$ |                | 4                                  | —   | 70                                 | ns   |
| CS disable to MISO <sup>1 3</sup> | $t_{\text{CS\_DIS\_MI}}$ |                | 4                                  | —   | 50                                 | ns   |
| MOSI setup time <sup>1 3</sup>    | $t_{\text{SU\_MO}}$      |                | 8                                  | —   | —                                  | ns   |
| MOSI hold time <sup>1 3 2</sup>   | $t_{\text{H\_MO}}$       |                | 7                                  | —   | —                                  | ns   |
| SCLK to MISO <sup>1 3 2</sup>     | $t_{\text{SCLK\_MI}}$    |                | 10 + 1.5 *<br>$t_{\text{HFERCLK}}$ | —   | 65 + 2.5 *<br>$t_{\text{HFERCLK}}$ | ns   |

**Note:**

1. Applies for both CLKPHA = 0 and CLKPHA = 1 (figure only shows CLKPHA = 0).
2.  $t_{\text{HFERCLK}}$  is one period of the selected HFERCLK.
3. Measurement done with 8 pF output loading at 10% and 90% of  $V_{\text{DD}}$  (figure shows 50% of  $V_{\text{DD}}$ ).

Figure 4.2. SPI Slave Timing Diagram

## 4.2 Typical Performance Curves

Typical performance curves indicate typical characterized performance under the stated conditions.

## 4.2.1 Supply Current

**Figure 4.3. EM0 Active Mode Typical Supply Current vs. Temperature**

**Figure 4.4. EM1 Sleep Mode Typical Supply Current vs. Temperature**

Typical supply current for EM2, EM3 and EM4H using standard software libraries from Silicon Laboratories.

**Figure 4.5. EM2, EM3, EM4H and EM4S Typical Supply Current vs. Temperature**

#### 4.2.2 DC-DC Converter

Default test conditions: CCM mode, LDCDC = 4.7  $\mu$ H, CDCDC = 1.0  $\mu$ F, VDCDC\_I = 3.3 V, VDCDC\_O = 1.8 V, FDCDC\_LN = 7 MHz

## 5. Typical Connection Diagrams

### 5.1 Power

Typical power supply connections for direct supply, without using the internal DC-DC converter, are shown in the following figure.

**Figure 5.1. EFR32BG1 Typical Application Circuit: Direct Supply Configuration without DC-DC converter**

Typical power supply circuits using the internal DC-DC converter are shown below. The MCU operates from the DC-DC converter supply. For low RF transmit power applications less than 13dBm, the RF PA may be supplied by the DC-DC converter. For OPNs supporting high power RF transmission, the RF PA must be directly supplied by VDD for RF transmit power greater than 13 dBm.

**Figure 5.2. EFR32BG1 Typical Application Circuit: Configuration with DC-DC converter (PAVDD from VDCDC)**

**Figure 5.3. EFR32BG1 Typical Application Circuit: Configuration with DC-DC converter (PAVDD from VDD)**

## 5.2 RF Matching Networks

Typical RF matching network circuit diagrams are shown in [Figure 5.4 Typical 2.4 GHz RF impedance-matching network circuits on page 102](#) for applications in the 2.4GHz band, and in [Figure 5.5 Typical Sub-GHz RF impedance-matching network circuits on page 102](#) for applications in the sub-GHz band. Application-specific component values can be found in the EFR32xG1 Reference Manual. For low RF transmit power applications less than 13dBm, the two-element match is recommended. For OPNs supporting high power RF transmission, the four-element match is recommended for high RF transmit power (> 13dBm).

Figure 5.4. Typical 2.4 GHz RF impedance-matching network circuits

Sub-GHz Match Topology I (169-500 MHz)

Sub-GHz Match Topology 2 (500-915 MHz)

Figure 5.5. Typical Sub-GHz RF impedance-matching network circuits

### 5.3 Other Connections

Other components or connections may be required to meet the system-level requirements. Application Note AN0002: "Hardware Design Considerations" contains detailed information on these connections. Application Notes can be accessed on the Silicon Labs website ([www.silabs.com/32bit-appnotes](http://www.silabs.com/32bit-appnotes)).

## 6. Pin Definitions

### 6.1 QFN48 2.4 GHz and Sub-GHz Device Pinout

Figure 6.1. QFN48 2.4 GHz and Sub-GHz Device Pinout

The following table provides package pin connections and general descriptions of pin functionality. For detailed information on the supported features for each GPIO pin, see [6.4 GPIO Functionality Table](#) or [6.5 Alternate Functionality Overview](#).

Table 6.1. QFN48 2.4 GHz and Sub-GHz Device Pinout

| Pin Name | Pin(s) | Description                       | Pin Name | Pin(s) | Description                        |
|----------|--------|-----------------------------------|----------|--------|------------------------------------|
| VSS      | 0      | Ground                            | PF0      | 1      | GPIO (5V)                          |
| PF1      | 2      | GPIO (5V)                         | PF2      | 3      | GPIO (5V)                          |

| PB15      | 36     | GPIO                                                                                                                                                                                        | VREGVSS   | 37     | Voltage regulator VSS                                                                                    |
| VREGSW    | 38     | DCDC regulator switching node                                                                                                                                                               | VREGVDD   | 39     | Voltage regulator VDD input                                                                              |
| DVDD      | 40     | Digital power supply.                                                                                                                                                                       | DECOUPLE  | 41     | Decouple output for on-chip voltage regulator. An external decoupling capacitor is required at this pin. |
| IOVDD     | 42     | Digital IO power supply.                                                                                                                                                                    | PC6       | 43     | GPIO (5V)                                                                                                |
| PC7       | 44     | GPIO (5V)                                                                                                                                                                                   | PC8       | 45     | GPIO (5V)                                                                                                |
| PC9       | 46     | GPIO (5V)                                                                                                                                                                                   | PC10      | 47     | GPIO (5V)                                                                                                |
| PC11      | 48     | GPIO (5V)                                                                                                                                                                                   |           |        |                                                                                                          |

**Note:**

1. GPIO with 5V tolerance are indicated by (5V).
2. The pins PA2, PA3, PA4, PB11, PB12, PB13, PD13, PD14, and PD15 will not be 5V tolerant on all future devices. In order to preserve upgrade options with full hardware compatibility, do not use these pins with 5V domains.

## 6.2 QFN48 2.4 GHz Device Pinout

**Figure 6.2. QFN48 2.4 GHz Device Pinout**

The following table provides package pin connections and general descriptions of pin functionality. For detailed information on the supported features for each GPIO pin, see [6.4 GPIO Functionality Table](#) or [6.5 Alternate Functionality Overview](#).

**Table 6.2. QFN48 2.4 GHz Device Pinout**

| Pin Name | Pin(s) | Description                       | Pin Name | Pin(s) | Description                        |

| PC11      | 48     | GPIO (5V)                                                                                                                                                                                   |           |        |                                                                                                          |

**Note:**

1. GPIO with 5V tolerance are indicated by (5V).
2. The pins PA2, PA3, PA4, PB11, PB12, PB13, PD13, PD14, and PD15 will not be 5V tolerant on all future devices. In order to preserve upgrade options with full hardware compatibility, do not use these pins with 5V domains.

### 6.3 QFN32 2.4 GHz Device Pinout

Figure 6.3. QFN32 2.4 GHz Device Pinout

The following table provides package pin connections and general descriptions of pin functionality. For detailed information on the supported features for each GPIO pin, see [6.4 GPIO Functionality Table](#) or [6.5 Alternate Functionality Overview](#).

Table 6.3. QFN32 2.4 GHz Device Pinout

| Pin Name | Pin(s) | Description                                                                                                                                                                                 | Pin Name | Pin(s) | Description                        |
|----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|------------------------------------|
| VSS      | 0      | Ground                                                                                                                                                                                      | PF0      | 1      | GPIO (5V)                          |
| PF1      | 2      | GPIO (5V)                                                                                                                                                                                   | PF2      | 3      | GPIO (5V)                          |
| PF3      | 4      | GPIO (5V)                                                                                                                                                                                   | RFVDD    | 5      | Radio power supply                 |
| HFXTAL_N | 6      | High Frequency Crystal input pin.                                                                                                                                                           | HFXTAL_P | 7      | High Frequency Crystal output pin. |
| RESETn   | 8      | Reset input, active low. To apply an external reset source to this pin, it is required to only drive this pin low during reset, and let the internal pull-up ensure that reset is released. | RFVSS    | 9      | Radio Ground                       |

| Pin Name  | Pin(s) | Description                                          | Pin Name  | Pin(s) | Description                                                                                              |

| DVDD      | 28     | Digital power supply.                                | DECOUPLE  | 29     | Decouple output for on-chip voltage regulator. An external decoupling capacitor is required at this pin. |
| IOVDD     | 30     | Digital IO power supply.                             | PC10      | 31     | GPIO (5V)                                                                                                |
| PC11      | 32     | GPIO (5V)                                            |           |        |                                                                                                          |

**Note:**

1. GPIO with 5V tolerance are indicated by (5V).
2. The pins PB11, PB12, PB13, PD13, PD14, and PD15 will not be 5V tolerant on all future devices. In order to preserve upgrade options with full hardware compatibility, do not use these pins with 5V domains.

## 6.4 GPIO Functionality Table

A wide selection of alternate functionality is available for multiplexing to various pins. The following table shows the name of each GPIO pin, followed by the functionality available on that pin. Refer to [6.5 Alternate Functionality Overview](#) for a list of GPIO locations available for each function.

**Table 6.4. GPIO Functionality Table**

| GPIO Name | Pin Alternate Functionality / Description |                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                          |                                                                                                                                         |                                                                                                                                           |

## 6.5 Alternate Functionality Overview

A wide selection of alternate functionality is available for multiplexing to various pins. The following table shows the name of the alternate functionality in the first column, followed by columns showing the possible LOCATION bitfield settings and the associated GPIO pin. Refer to [6.4 GPIO Functionality Table](#) for a list of functions available on each GPIO pin.

**Note:** Some functionality, such as analog interfaces, do not have alternate settings or a LOCATION bitfield. In these cases, the pinout is shown in the column corresponding to LOCATION 0.

**Table 6.5. Alternate Functionality Overview**

| Alternate     | LOCATION                               |                                        |                                           |                                           |                                  |                                              |                                          |                                          | Description                                                                                                                                                   |

## 6.6 Analog Port (APORT) Client Maps

The Analog Port (APORT) is an infrastructure used to connect chip pins with on-chip analog clients such as analog comparators, ADCs, DACs, etc. The APORT consists of a set of shared buses, switches, and control logic needed to configurably implement the signal routing. [Figure 6.4 APORT Connection Diagram on page 127](#) shows the APORT routing for this device family (note that available features may vary by part number). A complete description of APORT functionality can be found in the Reference Manual.

**Figure 6.4. APORT Connection Diagram**

Client maps for each analog circuit using the APORT are shown in the following tables. The maps are organized by bus, and show the peripheral's port connection, the shared bus, and the connection from specific bus channel numbers to GPIO pins.

In general, enumerations for the pin selection field in an analog peripheral's register can be determined by finding the desired pin connection in the table and then combining the value in the Port column (APORT\_\_), and the channel identifier (CH\_\_). For example, if pin

PF7 is available on port APORT2X as CH23, the register field enumeration to connect to PF7 would be APORT2XCH23. The shared bus used by this connection is indicated in the Bus column.

**Table 6.6. ACMP0 Bus and Pin Mapping**

| APORT4Y | APORT4X | APORT3Y | APORT3X | APORT2Y | APORT2X | APORT1Y | APORT1X | Port |

## 7. QFN48 Package Specifications

### 7.1 QFN48 Package Dimensions

Figure 7.1. QFN48 Package Drawing

Table 7.1. QFN48 Package Dimensions

| Dimension | Min      | Typ  | Max  |
|-----------|----------|------|------|
| A         | 0.80     | 0.85 | 0.90 |
| A1        | 0.00     | 0.02 | 0.05 |
| A3        | 0.20 REF |      |      |
| b         | 0.18     | 0.25 | 0.30 |
| D         | 6.90     | 7.00 | 7.10 |
| E         | 6.90     | 7.00 | 7.10 |
| D2        | 4.60     | 4.70 | 4.80 |
| E2        | 4.60     | 4.70 | 4.80 |
| e         | 0.50 BSC |      |      |
| L         | 0.30     | 0.40 | 0.50 |
| K         | 0.20     | —    | —    |
| R         | 0.09     | —    | 0.14 |
| aaa       | 0.15     |      |      |
| bbb       | 0.10     |      |      |
| ccc       | 0.10     |      |      |
| ddd       | 0.05     |      |      |
| eee       | 0.08     |      |      |
| fff       | 0.10     |      |      |

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to the JEDEC Solid State Outline MO-220, Variation VKKD-4.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

## 7.2 QFN48 PCB Land Pattern

Figure 7.2. QFN48 PCB Land Pattern Drawing

Table 7.2. QFN48 PCB Land Pattern Dimensions

| Dimension | Typ  |
|-----------|------|
| S1        | 6.01 |
| S         | 6.01 |
| L1        | 4.70 |
| W1        | 4.70 |
| e         | 0.50 |
| W         | 0.26 |
| L         | 0.86 |

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. This Land Pattern Design is based on the IPC-7351 guidelines.
3. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu$ m minimum, all the way around the pad.
4. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
5. The stencil thickness should be 0.125 mm (5 mils).
6. The ratio of stencil aperture to land pad size can be 1:1 for all perimeter pads.
7. A 4x4 array of 0.75 mm square openings on a 1.00 mm pitch can be used for the center ground pad.
8. A No-Clean, Type-3 solder paste is recommended.
9. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

### 7.3 QFN48 Package Marking

Figure 7.3. QFN48 Package Marking

The package marking consists of:

- P P P P P P P P P – The part number designation.
  1. Family Code (B | M | F)
  2. G (Gecko)
  3. Series (1, 2,...)
  4. Performance Grade (P | B | V)
  5. Feature Code (1 to 7)
  6. TRX Code (3 = TXRX | 2 = RX | 1 = TX)
  7. Band (1 = Sub-GHz | 2 = 2.4 GHz | 3 = Dual-band)
  8. Flash (J = 1024K | H = 512K | G = 256K | F = 128K | E = 64K | D = 32K)
  9. Temperature Grade (G = -40 to 85 | I = -40 to 125)
- YY – The last 2 digits of the assembly year.
- WW – The 2-digit workweek when the device was assembled.
- T T T T T T – A trace or manufacturing code. The first letter is the device revision.
- # – Bootloader revision number.

## 8. QFN32 Package Specifications

### 8.1 QFN32 Package Dimensions

Figure 8.1. QFN32 Package Drawing

Table 8.1. QFN32 Package Dimensions

| Dimension | Min      | Typ  | Max  |
|-----------|----------|------|------|
| A         | 0.80     | 0.85 | 0.90 |
| A1        | 0.00     | 0.02 | 0.05 |
| A3        | 0.20 REF |      |      |
| b         | 0.18     | 0.25 | 0.30 |
| D/E       | 4.90     | 5.00 | 5.10 |
| D2/E2     | 3.40     | 3.50 | 3.60 |
| E         | 0.50 BSC |      |      |
| L         | 0.30     | 0.40 | 0.50 |
| K         | 0.20     | —    | —    |
| R         | 0.09     | —    | 0.14 |
| aaa       | 0.15     |      |      |
| bbb       | 0.10     |      |      |
| ccc       | 0.10     |      |      |
| ddd       | 0.05     |      |      |
| eee       | 0.08     |      |      |
| fff       | 0.10     |      |      |

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to the JEDEC Solid State Outline MO-220, Variation VKKD-4.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

## 8.2 QFN32 PCB Land Pattern

Figure 8.2. QFN32 PCB Land Pattern Drawing

Table 8.2. QFN32 PCB Land Pattern Dimensions

| Dimension | Typ  |
|-----------|------|
| S1        | 4.01 |
| S         | 4.01 |
| L1        | 3.50 |
| W1        | 3.50 |
| e         | 0.50 |
| W         | 0.26 |
| L         | 0.86 |

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. This Land Pattern Design is based on the IPC-7351 guidelines.
3. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu$ m minimum, all the way around the pad.
4. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
5. The stencil thickness should be 0.125 mm (5 mils).
6. The ratio of stencil aperture to land pad size can be 1:1 for all perimeter pads.
7. A 3x3 array of 0.85 mm square openings on a 1.00 mm pitch can be used for the center ground pad.
8. A No-Clean, Type-3 solder paste is recommended.
9. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

### 8.3 QFN32 Package Marking

Figure 8.3. QFN32 Package Marking

The package marking consists of:

- P P P P P P P P P – The part number designation.
  1. Family Code (B | M | F)
  2. G (Gecko)
  3. Series (1, 2,...)
  4. Performance Grade (P | B | V)
  5. Feature Code (1 to 7)
  6. TRX Code (3 = TXRX | 2 = RX | 1 = TX)
  7. Band (1 = Sub-GHz | 2 = 2.4 GHz | 3 = Dual-band)
  8. Flash (J = 1024K | H = 512k | G = 256K | F = 128K | E = 64K | D = 32K)
  9. Temperature Grade (G = -40 to 85 | I = -40 to 125)
- YY – The last 2 digits of the assembly year.
- WW – The 2-digit workweek when the device was assembled.
- T T T T T T – A trace or manufacturing code. The first letter is the device revision.

## 9. Revision History

### Revision 1.3

April, 2018

- [Table 3.1 Configuration Summary on page 17](#): Corrected USART1 features (removed IrDA).
- [Table 4.6 Current Consumption 3.3 V using DC-DC Converter on page 27](#):
  - Typical values for  $I_{EM2}$  updated to 2.5 and 2.2  $\mu$ A per errata CUR\_E201.
  - Typical value for  $I_{EM3}$  updated to 2.1  $\mu$ A per errata CUR\_E201.
- [Table 4.15 RF Receiver Characteristics for Bluetooth Low Energy in the 2.4GHz Band, 1 Mbps Data Rate on page 38](#): typical value for SENS updated to -92.5 dBm per errata RADIO\_E206.
- [Table 4.17 RF Receiver Characteristics for 802.15.4 DSSS-OQPSK in the 2.4 GHz Band on page 42](#): Typical values for SENS updated to -99 dBm per errata RADIO\_E208.

## Revision 1.2

November, 2017

- Applied latest formatting, style, and sequence guidelines.
- Updated front page with new title and messaging.
- "Bluetooth Smart" changed to "Bluetooth Low Energy"
- Added high-temperature (-I grade) part numbers and associated sections / specifications.
- Parameter Names, Symbol Names, and Test Conditions throughout electrical specification tables updated for consistency across all EFR32xG1x product families.
- Electrical specification changes not related to formatting consistency, typographical errors, or the addition of high-temperature part numbers are listed below.
  - [4.1.1 Absolute Maximum Ratings](#):
    - $V_{DDMAX}$ : Min value changed from 0 to -0.3 V.
    - Removed  $P_{RFMAXSUBG}$ ,  $V_{MAXDIFFSUBG}$ , and  $\Delta V_{DD}$  specifications.
    - Split  $V_{MAXSUBG}$  into separate line items for SUBGRF\_OP/SUBGRF\_ON and SUBGRF\_IP/SUBGRF\_IN.
    - $V_{MAXSUBG}$  for SUBGRF\_IP/SUBGRF\_IN: Min = -0.3 V, Max = +0.3 V.
    - Added footnotes to clarify  $V_{DIGPIN}$  specification for 5V tolerant GPIO.
  - [Table 4.2 General Operating Conditions on page 22](#):
    - Added  $C_{DECOUPLE}$  and  $f_{HFCLK}$  specifications.
    - Added footnote for additional information on peak current during voltage scaling operations.
  - [Table 4.6 Current Consumption 3.3 V using DC-DC Converter on page 27](#):
    - $I_{EM1}$ : CCM Mode specifications removed from table.
    - Low Power Mode footnote corrected from "LPBIAS=3" to "LPCMPBIAS=0", and "LPCILIMSEL" to "LPCLIMILIMSEL".
  - [4.1.9.3 RF Transmitter Characteristics for Bluetooth Low Energy in the 2.4GHz Band, 1 Mbps Data Rate](#):
    - TXBW: Test Condition at 10 dBm added.
    - Footnote referring to Bluetooth Core specification updated to "Bluetooth Core\_5.0..." from "Bluetooth Core\_4.2..."
  - [Table 4.17 RF Receiver Characteristics for 802.15.4 DSSS-OQPSK in the 2.4 GHz Band on page 42](#):  $RSSI_{MAX}$  value placed in Max column and  $RSSI_{MIN}$  value placed in Min column.
  - [Table 4.19 Sub-GHz RF Receiver Characteristics for 915 MHz Band on page 47](#): 100kbps reference signal footnote corrected to show 400 kHz channel spacing instead of 200 kHz.
  - [Table 4.34 HFRCO on page 71](#) and [Table 4.35 AUXHFRCO on page 72](#) tables separated (specifications are identical for this product).
  - [Table 4.37 Flash Memory Characteristics<sup>5</sup> on page 73](#):
    - Added single-word programming time and clarified existing specification as per-word timing for a 128-word burst write.
    - Added footnotes to clarify mass, device, and page erase timing conditions.
  - [Table 4.39 Voltage Monitor \(VMON\) on page 76](#):  $I_{VMON}$  specifications for EM2/3/4 separated into above threshold and below threshold conditions.
  - [Table 4.40 Analog to Digital Converter \(ADC\) on page 77](#):
    - $V_{ADCIN}$  specification changed to reference  $V_{FS}$  instead of  $V_{REF}$ .
    - Input referred ADC noise specification removed.
    - Footnotes added to clarify internal and external reference configurations.
  - [Table 4.41 Analog Comparator \(ACMP\) on page 79](#): Text explaining total ACMP current calculation brought into table as a footnote.
  - [4.1.21 USART SPI](#):
    - SPI Master Timing: Updated with relaxed values.
    - SPI Slave Timing: Corrected  $t_{SCLK}$  Min value to " $6 * t_{HFPERCLK}$ " from " $2 * t_{HFPERCLK}$ ".
    - Updated remainder of specifications to match formatting and common specs in all EFR32xG1x product families.
- Added PCNT electrical specifications table: [Table 4.43 Pulse Counter \(PCNT\) on page 83](#).
- [4.2 Typical Performance Curves](#): Added data for >85C operation.
- [5.2 RF Matching Networks](#): Removed redundant paragraph in introduction.
- Added section [5.3 Other Connections](#).
- Condensed pinout tables and moved detailed GPIO functionality information to [6.4 GPIO Functionality Table](#).
- Added [Figure 6.4 APORT Connection Diagram on page 127](#).

- Corrected flash designator description in Package Marking sections.

## Revision 1.1

2016-Oct-26

- Ordering Information: Removed Encryption column. All products in family include full encryption capabilities. Previously EFR32BG1V devices listed as "AES only".
- System Overview Sections: Minor wording and typographical error fixes.
- Electrical Characteristics: Minor wording and typographical error fixes.
- "Sub-GHz Receiver Characteristics for 433 MHz Band" table in Electrical Characteristics: Corrected Sensitivity spec error where data for 50 kbps and 2.4 kbps were swapped.
- "HFRCO and AUXHFRCO" table in Electrical Characteristics: f\_HFRCO symbol changed to f\_HFRCO\_ACC.
- Pinout tables: APORT channel details removed from "Analog" column. This information is now found in the APORT client map sections.
- Updated APORT client map sections.

## Revision 1.0

2016-Jul-22

- Electrical Characteristics: Minimum and maximum value statement changed to cover full operating temperature range.
- Finalized Specification Tables. Tables with condition/min/typ/max or footnote changes include:
  - Absolute Maximum Ratings
  - General Operating Conditions
  - DC-DC Converter
  - Current Consumption Using Radio 3.3V with DC-DC
  - RF Transmitter General Characteristics for 2.4 GHz Band
  - RF Receiver General Characteristics for 2.4 GHz Band
  - RF Receiver Characteristics for Bluetooth Smart in the 2.4 GHz Band
  - RF Transmitter Characteristics for 802.15.4 DSSS-OQPSK in the 2.4 GHz Band
  - RF Receiver Characteristics for 802.15.4 DSSS-OQPSK in the 2.4 GHz Band
  - Sub-GHz RF Transmitter characteristics for 868 MHz Band
  - Sub-GHz RF Transmitter characteristics for 490 MHz Band
  - Sub-GHz RF Receiver characteristics for 490 MHz Band
  - Sub-GHz RF Receiver characteristics for 433 MHz Band
  - HFRCO and AUXHFRCO
  - ADC
  - IDAC
- Updated Typical Performance Graphs.
- Added external ground note to 2G4RF\_ION pin descriptions.
- Added note for 5V tolerance to pinout GPIO Overview sections.
- Updated OPN decoder with latest revision.
- Updated Package Marking text with latest descriptions.

## Revision 0.97

2016-06-06

- Added dual-band and sub-GHz OPNs.

## Revision 0.951

2016-06-03

- Electrical specification tables updated with additional characterization data.

**Revision 0.95**

2016-04-11

- All OPNs changed to rev C0. Note the following:
  - All OPNs ending in -B0 are Engineering Samples based on an older revision of silicon and are being removed from the OPN table. These older revisions should be used for evaluation only and will not be supported for production.
  - OPNs ending in -C0 are the Current Revision of Silicon and are intended for production.
- Electrical specification tables updated with latest characterization data and production test limits.

**Revision 0.9**

2016-01-12

- Added Performance line (EFR32BG1Pxxx) OPN's and associated electrical specifications.
- Updated electrical specifications with latest characterization data.
- Added thermal characteristics table.
- Updated OPN decoder figure to include extended family options.
- Removed BOOT\_TX and BOOT\_RX alternate functions.

**Revision 0.81**

2015-12-01

- Engineering samples note added to ordering information table.

**Revision 0.8**

2015-11-6

- Consolidated individual device datasheets into single-family document.
- Re-formatted ordering information table and OPN decoder.
- Updated block diagrams for front page and system overview.
- Removed extraneous sections from DC-DC and wake-on-radio from system overview.
- Updated table formatting for electrical specifications to tech pubs standards.
- Updated electrical specifications with latest available data.
- Added I2C and USART SPI timing tables.
- Moved DC-DC graph to typical performance curves.
- Updated APORT tables and APORT references to correct nomenclature.

**Revision 0.7**

2015-08-31

Outcome of comprehensive review cycle of EFR32BG Datasheets. Major changes span the following sections

- Section 2: Ordering Information
- Section 3.3.4: Receiver Architecture
- Section 3.3.5: Transmitter Architecture
- Section 4: Electrical Characteristics
- Section 4.3.1: General Operating Conditions
- Section 4.4: DC-DC Converter
- Section 4.5: Current Consumption
- Section 4.9.1: RF Transmitter Characteristics for 2.4 GHz Band
- Section 4.9.2: RF Receiver General Characteristics for 2.4 GHz Band
- Section 4.9.3: RF Transmitter Characteristics for Bluetooth Smart in 2.4 GHz Band
- Section 4.9.4: RF Receiver Characteristics for Bluetooth Smart in 2.4 GHz Band
- Section 4.11.1: LFXO
- Section 4.11.2: HFXO
- Section 4.12: GPIO
- Section 4.13: VMON
- Section 4.14: ADC
- Section 4.15: IDAC
- Section 4.16: Analog Comparator
- Section 5: Application Circuits
- Section 6.5: QFNxx Package
- Section 6.7: QFNxx Package Marking

### Disclaimer

Silicon Labs intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Labs products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Labs reserves the right to make changes without further notice and limitation to product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Silicon Labs shall have no liability for the consequences of use of the information supplied herein. This document does not imply or express copyright licenses granted hereunder to design or fabricate any integrated circuits. The products are not designed or authorized to be used within any Life Support System without the specific written consent of Silicon Labs. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Labs products are not designed or authorized for military applications. Silicon Labs products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons.
