Wire Bondable Vertical SiCap WLSC 0101 220pF BV50

Rev. 2.00

General description

WLSC Capacitors target power supplies decoupling and filtering of active devices. They are based on PICS Integrated Passive technology.

This product is a single 220pF capacitor in 0101 package size. Other capacitance values and other package size are available as a single die or capacitor array; please feel free to contact us.

WLSC apacitors are directly mounted on the PCB application using die bonding or wire bonding processes. Standard FR4 PCB can be used. The bottom electrode is in TiNiAu and the top electrode is in TiWAu. Other top finishings such as Aluminum are available on request.

Key features

- Compatible with MLCC footprint
- Ultra-high stability of capacitance value:
  - Temperature 70ppm/K (-55 °C to +150 °C)
  - Voltage <-0.02%/Volt
  - Negligible capacitance loss through ageing
- Low profile 0.1mm
- Small size 0.25 x 0.25 mm (0101 format)
- Break down voltage : 50V
- Low leakage current
- High reliability
- High operating temperature (up to 150 °C)
- Compatible with high temperature cycling during manufacturing operations (exceeding 300 °C)
- Compatible with EIA 0101 footprint
- Applicable for standard wire bonding assembly (ball and wedge)

Key applications

- Any demanding applications, such as medical, aerospace, automotive industrial…
- Supply decoupling / filtering of active device
- High reliability applications
- Battery operated devices
- High temperature applications
- High volumetric efficiency *(i.e. capacitance per unit volume)*

Pad Metallization

This wire bondable capacitor is delivered as standard with the bottom electrode in TiNiAu ($_{Ti\ (0.1\ \mu m)/Ni\ (0.3\mu m)/Au\ (0.2\mu m)}$) and top electrode in TiWAu ($_{TiWAu\ (0.3\mu m)\ /\ Au\ (3\mu m)}$).

Other Metallization, such as thick Gold or Aluminum top pads are possible on request.

Silicon dies are not sensitive to humidity, please refer to applications notes 'Assembly Notes' section 'Handling precautions and storage'.

Material regulation

This product is RoHS compliant at the time of publication. For further information about regulation compliancy, please ask your sales representative.

Package outline

The product is delivered as a bare silicon die.

Assembly

WLSC capacitors are directly mounted on the PCB application using die bonding and wire bonding.

It is applicable for standard wire bonding assembly (ball and wedge).

For further information, please see our mounting application note.

The attachment techniques recommended by Murata on the customer's substrates are fully detailed in specific documents available on our website. To assure the correct use and proper functioning of Murata capacitors **please download the assembly instructions on https://www.murata.com/en-us/products/capacitor/siliconcapacitors and read them carefully.**

Data sheet status

Objective specification: This data sheet contains target or goal specifications for product development.

Preliminary specification: This data sheet contains preliminary data; supplementary data may be published later.

Product specification: This data sheet contains final product specifications.

Limiting values

Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those given in the Electrical performances sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information

Where application information is given, it is advisory and does not form part of the specification.
