

FEATURES

- ▶ Industrial Standard DIP-24 Package
- ▶ Wide 2:1 Input Voltage Range
- ▶ Fully Regulated Output Voltage
- ▶ I/O Isolation 1500 VDC (opt. 3000VDC)
- ▶ Operating Ambient Temp. Range -40°C to +85°C
- ▶ No Min. Load Requirement
- ▶ Overload and Short Circuit Protection
- ▶ Designed-in Conducted EMI meets EN55022 Class A & FCC Level A
- ▶ UL/cUL/IEC/EN 60950-1 Safety Approval

PRODUCT OVERVIEW

The MINMAX MIW06 series is a new range of high performance dc-dc converter modules with 6W output power, featuring wide 2:1 input voltage ranges and tight output voltage regulation. The product comes in a DIP-24 package with industry standard footprint.

Excellent efficiency allows an operation temperature range of -40°C to +85°C (with derating). Standard features include overload protection.

Typical applications for these cost optimized converters are battery powered equipment, instrumentation, datacom and industrial electronics.

Model Selection Guide

Model Number	Input Voltage (Range)	Output Voltage	Output Current	Input Current		Reflected Ripple Current	Max. capacitive Load	Efficiency (typ.)
				@Max. Load	@No Load			@Max. Load
			Max.					
	VDC	VDC	mA	mA(typ.)	mA(typ.)	mA(typ.)	μF	%
MIW06-12S033	12 (9 ~ 18)	3.3	1200	440	40	30	470	75
MIW06-12S05		5	1200	641			470	78
MIW06-12S12		12	500	609			100	82
MIW06-12S15		15	400	609			100	82
MIW06-12S24		24	250	595			47	84
MIW06-12D05		±5	±500	534			100#	78
MIW06-12D12		±12	±250	609			100#	82
MIW06-12D15		±15	±200	609			100#	82
MIW06-24S033	24 (18 ~ 36)	3.3	1200	214	20	20	470	77
MIW06-24S05		5	1200	313			470	80
MIW06-24S12		12	500	298			100	84
MIW06-24S15		15	400	298			100	84
MIW06-24S24		24	250	298			47	84
MIW06-24D05		±5	±500	260			100#	80
MIW06-24D12		±12	±250	298			100#	84
MIW06-24D15		±15	±200	298			100#	84
MIW06-48S033	48 (36 ~ 75)	3.3	1200	107	10	15	470	77
MIW06-48S05		5	1200	156			470	80
MIW06-48S12		12	500	149			100	84
MIW06-48S15		15	400	149			100	84
MIW06-48S24		24	250	149			47	84
MIW06-48D05		±5	±500	130			100#	80
MIW06-48D12		±12	±250	149			100#	84
MIW06-48D15		±15	±200	149			100#	84

(Other Output Models)

Notes

- 1 Specifications typical at $T_a = +25^\circ\text{C}$, resistive load, nominal input voltage and rated output current unless otherwise noted.
- 2 Transient recovery time is measured to within 1% error band for a step change in output load of 75% to 100%.
- 3 We recommend to protect the converter by a slow blow fuse in the input supply line.
- 4 Other input and output voltage may be available, please contact factory.
- 5 That "natural convection" is about 20LFM but is not equal to still air (0 LFM).
- 6 Specifications are subject to change without notice.

Test Setup

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor L_{in} (4.7 μ H) and C_{in} (220 μ F, ESR < 1.0 Ω at 100 KHz) to simulate source impedance. Capacitor C_{in} , offsets possible battery impedance. Current ripple is measured at the input terminals of the module, measurement bandwidth is 0-500 KHz.

Peak-to-Peak Output Noise Measurement Test

Use a C_{out} 0.47 μ F ceramic capacitor. Scope measurement should be made by using a BNC socket, measurement bandwidth is 0-20 MHz. Position the load between 50 mm and 75 mm from the DC/DC Converter.

Technical Notes

Overcurrent Protection

To provide protection in a fault (output overload) condition, the unit is equipped with internal current limiting circuitry and can endure current limiting for an unlimited duration. At the point of current-limit inception, the unit shifts from voltage control to current control. The unit operates normally once the output current is brought back into its specified range.

Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module. In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup. Capacitor mounted close to the power module helps ensure stability of the unit, it is recommended to use a good quality low Equivalent Series Resistance (ESR < 1.0 Ω at 100 KHz) capacitor of a 3.3 μ F for the 12V input devices and a 2.2 μ F for the 24V and 48V devices.

Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance. To reduce output ripple, it is recommended to use 3.3 μ F capacitors at the output.

Maximum Capacitive Load

The MIW06 series has limitation of maximum connected capacitance at the output. The power module may be operated in current limiting mode during start-up, affecting the ramp-up and the startup time. The maximum capacitance can be found in the data sheet.

Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 100°C. The derating curves are determined from measurements obtained in a test setup.
