

INTRODUCTION

The KA22136/D is a monolithic integrated circuit designed for use in low voltage and low power applications. It has functions including dual audio pre-power amplifier, electronic volume controller and DC motor speed controller in a single chip. It is suitable for portable tape recorders headphone cassette tape recorders or radios that are battery-operated.

FEATURES

- Low current consumption in an operating voltage range
- Operating supply voltage range: $V_{CC} = 2.1V \sim 5V$
- Only a few components in composing a headphone cassette tape recorder
- Dual audio pre-power amplifier, electronic volume controller and DC motor speed controller in a single chip
- Reduced input and output coupling capacitors because of 1/2 V_{CC} AMP adoption on chip as AC GND
