LK112

Low noise and low drop voltage regulator with shutdown function

Datasheet - production data

SOT23-5L

Features

- Output current up to 150 mA
- Low-dropout voltage (350 mV at I_{OUT} = 150 mA)
- Very low quiescent current:
  - 0.1 µA in OFF mode and max. 250 µA in ON mode at I_{OUT} = 0 mA
- Low output noise:
  - typ. 30 µV at I_{OUT} = 60 mA and 10 Hz < f < 80 kHz
- Wide range of output voltages
- Internal current and thermal limit
- Operative input voltage from:
  - V_{OUT} + 0.5 to 14 V (for V_{OUT} > 2 V) or from 2.5 V to 14 V (for V_{OUT} < 2 V)

Description

The LK112 is a low-dropout linear regulator with a built-in electronic switch. The internal switch can be controlled by TTL or CMOS logic levels. The device is on-state when the control pin is pulled to a logic high level. An external capacitor can be connected to the noise bypass pin to reduce the output noise level to 30 µVrms. An internal PNP pass transistor is used to achieve a low-dropout voltage. The LK112 has a very low quiescent current in on mode while in off mode I_q is reduced below 100 nA max. The internal thermal shutdown circuitry limits the junction temperature below 150 °C. Load current is internally monitored and the device shuts down in the presence of a short-circuit or overcurrent condition on the output.
