

# PIC16(L)F170X/171X

## Cost Effective 8-Bit Intelligent Analog Flash Microcontrollers

### Description:

PIC16F(L)170X/171X microcontrollers combine Intelligent Analog integration with low cost and extreme low power (XLP) to suit a variety of general purpose applications. These 14 to 44-pin devices deliver on-chip Op Amps, Core Independent Peripherals (CLC, NCO and COG), Peripheral Pin Select and Zero-Cross Detect, providing for increased design flexibility.

### Core Features:

- C Compiler Optimized RISC Architecture
- Only 49 Instructions
- Operating Speed:
  - 0-32 MHz clock input
  - 125 ns minimum instruction cycle
- Interrupt Capability
- 16-Level Deep Hardware Stack
- Up to Four 8-bit Timers
- One 16-bit Timer
- Power-on Reset (POR)
- Power-up Timer (PWRT)
- Low-Power Brown-Out Reset (LPBOR)
- Programmable Watchdog Timer (WDT) up to 256s
- Programmable Code Protection

### Memory:

- Up to 16 Kwords Flash Program Memory
- Up to 2048 Bytes Data SRAM Memory
- Direct, Indirect and Relative Addressing modes

### Operating Characteristics:

- Operating Voltage Range:
  - 1.8V to 3.6V (PIC16LF170X/171X)
  - 2.3V to 5.5V (PIC16F170X/171X)
- Temperature Range:
  - Industrial: -40°C to 85°C
  - Extended: -40°C to 125°C

### eXtreme Low-Power (XLP) Features:

- Sleep mode: 50 nA @ 1.8V, typical
- Watchdog Timer: 500 nA @ 1.8V, typical
- Secondary Oscillator: 500 nA @ 32 kHz
- Operating Current:
  - 8 uA @ 32 kHz, 1.8V, typical
  - 32 uA/MHz @ 1.8V, typical

### Digital Peripherals:

- Configurable Logic Cell (CLC):
  - Integrated combinational and sequential logic
- Complementary Output Generator (COG):
  - Rising/falling edge dead-band control/blanking
- Numerically Controlled Oscillator (NCO):
  - Generates true linear frequency control and increased frequency resolution
  - Input Clock: 0Hz < FNCO < 32 MHz
  - Resolution: FNCO/220
- Capture/Compare/PWM (CCP) module
- PWM: Two 10-bit Pulse-Width Modulators
- Serial Communications:
  - SPI, I<sup>2</sup>C™, RS-232, RS-485, LIN compatible
  - Auto-Baud Detect, auto-wake-up on start
- Up to 35 I/O Pins and One Input Pin:
  - Individually programmable pull-ups
  - Slew rate control
  - Interrupt-on-change with edge-select
- Peripheral Pin Select (PPS):
  - Enables pin mapping of digital I/O

### Intelligent Analog Peripherals:

- Operational Amplifiers:
  - Two configurable rail-to-rail op amps
  - Selectable internal and external channels
  - 2 MHz gain bandwidth product
- High-Speed Comparators:
  - Up to two comparators
  - 50 ns response time
  - Rail-to-rail inputs
- 10-Bit Analog-to-Digital Converter (ADC):
  - Up to 28 external channels
  - Conversion available during Sleep
  - Temperature indicator
- Zero-Cross Detector (ZCD):
  - Detect when AC signal on pin crosses ground
- 8-Bit Digital-to-Analog Converter (DAC):
  - Output available externally
  - Internal connections to comparators, op amps, Fixed Voltage Reference (FVR) and ADC
- Internal Voltage Reference module

# PIC16(L)F170X/171X

## Clocking Structure:

- 16 MHz Internal Oscillator Block:
  - $\pm 1\%$  at calibration
  - Selectable frequency range from 0 to 32 MHz
- 31 kHz Low-Power Internal Oscillator
- External Oscillator Block with:
  - Three crystal/resonator modes up to 20 MHz
  - Two external clock modes up to 32 MHz
- Fail-Safe Clock Monitor
- Two-Speed Oscillator Start-up
- Oscillator Start-up Timer (OST)

## Programming/Debug Features:

- In-Circuit Debug Integrated On-Chip
- Emulation Header for Advanced Debug:
  - Provides trace, background debug and up to 32 hardware break points
- In-Circuit Serial Programming™ (ICSP™) via Two Pins

## PIC16(L)F170X/171X FAMILY TYPES

Device	Program Memory Flash (words)	Data SRAM (bytes)	I/O Pins	8-bit/16-bit Timers	High-Speed Comparators	Op Amp	10-bit ADC (ch)	5-/8-bit DAC	Zero Cross	CCP/PWM	COG	EUSART	I <sup>2</sup> C™/SPI	CLC	NCO	Debug <sup>(1)</sup>

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**== ISO/TS 16949 ==**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
