Notes:

1. The specified maximum capacitive load is for each output.
2. Load regulation is measured over a range of 10% to 100% I_{OUT}.
3. When measuring output ripple, it is recommended that an external 0.1 µF ceramic capacitor be placed from the +Vout pin to the -Vout pin, as shown in the typical connection diagram at right.
4. With the addition of input filter components, all models will meet EN 55022 class B. A suggested circuit is shown in the connection diagram at right (components C_2, L_1). Contact the factory for more information.
5. To meet the requirements of EN 61000-4-5, external components are needed. The typical connection at right shows the external components C_1 and D_1 that would typically achieve this. Contact the factory for more information.
6. Operation at no-load will not damage the unit, but they may not meet all specifications.
7. It is recommended that a fuse be used on the input of a power supply for protection. See the Model Selection tables for the correct rating.

Typical Connection

For applications that require meeting EMC standards, the diagram above illustrates a typical connection of the **MD100x-xxTI** series. The units do not require external components to operate as specified. All components should be mounted as close to the unit as possible.

Capacitors C_3 & C_4 are not required to meet specifications, but may be used if a lower level of output ripple is required. Capacitor C_3 is a high frequency ceramic capacitor and C_4 is an electrolytic.

Recommended values for components are:

Component	C_1	D_1	C_2	L_1	C_3	C_4
MD105x-xxTI	1,000 µF/35V	3.0SMCJ9.0AG	1206, 4.7 µF/50V	6.8 µH	0.1 µF	10 µF
MD112x-xxTI	1,000 µF/35V	3.0SMCJ18AG	1206, 4.7 µF/50V	6.8 µH	0.1 µF	10 µF
MD124x-xxTI	330 µF/50V	3.0SMCJ28AG	1206, 4.7 µF/50V	6.8 µH	0.1 µF	10 µF
