Mating and un-mating

For the reliable mating and un-mating follow the precautions :

- 1. The vertical mating axis of the PCB receptacle and the adapter has to be aligned during the connecting and a hearable click will confirm that the connectors are mated correctly.
- 2. The disconnection of the 2 connectors is carried out by vertical pulling of the adapter.
- 3. The connectors should not be mated under an extreme angle.
- 4. The mating force should be in the limits $5 \text{ N} \leq F \leq 10 \text{ N}$
