

MFA350 Series

- Screw Terminals Available
- U Channel & Cover Fan Formats
- High Power Density 11.1 W/in³
- 5 V Standby & 12 V Fan Outputs
- Active Current Share
- Remote On/Off
- AC & DC OK Signals
- -10 °C to +70 °C Operation
- Level B Conducted Emissions

The MFA350 has been designed with multiple mechanical options to facilitate its integration into a wide range of applications. Designers of these systems demand higher power from AC-DC units in industry-standard formats as processing power and functionality grows within tight space constraints. The MFA350 delivers over 350 W across the full universal AC input range from an industry-standard 3.2 x 6.8 inch (81.3 x 172.7 mm) footprint. It is 1.5 inches (38.1 mm) high and achieves 11.1 Watts per cubic inch power density without compromising performance or functionality.

With efficiency up to 88% at full load, the MFA350 operates up to 50 °C ambient and up to 70 °C ambient with derating. The main output is 12, 24 or 48 VDC but each power supply also has a 5 V, 0.3 A standby output and a 12 V, 1A output for powering fans. The unit incorporates a fully featured signal set including AC OK/DC OK, remote on/off and active current sharing.

Notes

- Units supplied with Molex connections for J1 & J2 as standard. Add suffix '-S' to model number to replace with screw terminals. Add suffix '-TF' for covered version with top fan and suffix '-EF' for covered version with end fan. Example:- MFA350PS12-STF, 12V unit fitted with screw terminals and top fan.
- Not available for -TF & -EF versions.

Thermal Considerations (U Channel)

In order to ensure correct and reliable operation of the PSU in the most adverse conditions permitted in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. See drawing on page 12 for component locations. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of any direct air flow).

Temperature Measurements (Ambient $\leq 50\text{ }^{\circ}\text{C}$)	
Component	Max Temperature $^{\circ}\text{C}$
T3	90 $^{\circ}\text{C}$
BR1	105 $^{\circ}\text{C}$
D35	85 $^{\circ}\text{C}$
L3	90 $^{\circ}\text{C}$

Service Life

The estimated service life of the MFA350 is determined by the cooling arrangements and load conditions experienced in the end application. Due to the uncertain nature of the end application this estimated service life is based on the actual measured temperature of two key capacitors within the product when installed in the end application. The highest of the two component temperatures should be used. The graph below expresses the estimated lifetime for a given component temperature and assumes continuous operation at this temperature.

Estimated Service Life vs Component Temperature

MFA350 Hotswap Series

- 3.3" x 10.0" x 1.6"
- High Power Density 6.7 W/in³
- 5 V Standby Output
- Active Current Share
- Remote On/Off
- AC & DC OK Signals
- -10 °C to +70 °C Operation
- High Efficiency
- Level B Conducted Emissions

Designed for communications applications, the MFA350 Hotswap has been developed to meet the needs of networking equipment, voice over IP systems, wireless LANs, servers, storage area networks and post-production broadcast equipment. Designers of these systems demand higher power from AC-DC units as processing power and functionality grows within tight space constraints. The MFA350 Hotswap delivers over 350 W across the full universal AC input range from a 3.3 x 10.0 inch (83.8 x 254.0 mm) footprint. It is 1.6 inches (40.6 mm) high and achieves 6.7 Watts per cubic inch power density without compromising performance or functionality.

With full power operation at up to 50 °C ambient and operation to 70 °C ambient with derating. The main output is either 12, 24 or 48 VDC but each power supply also has a 5 V, 0.3 A standby output. The unit incorporates an integral fan and a fully featured signal set including AC OK/DC OK, remote on/off and active current sharing.

General Specifications

Characteristic	Minimum	Typical	Maximum	Units	Notes & Conditions
Efficiency		86		%	Full load (see fig. 8 & 9)
Isolation: Input to Output Input to Ground Output to Ground	3000			VAC	
	1500			VAC	
	100			VDC	
Switching Frequency: PFC Main Converter		78		kHz	
		120		kHz	
Power Density			11.1	W/in ³	
Mean Time Between Failure		420		kHrs	MIL-HDBK-217F, Notice 2 +25 °C GB
Weight			1.35 (612)	lb (g)	

Characteristic	Notes & Conditions
Signals	
AC OK/Powerfail	Open collector referenced to output 0V, transistor normally off when AC is good (see fig. 10, 16, 17 & 18) AC OK: Provides ≥ 5 ms warning of loss of output from AC failure
DC OK	Open collector referenced to 0 V, transistor normally off when DC is good (see fig. 11, 19 & 20). Provides warning of DC output failure
Remote On/Off (Inhibit/Enable)	Remotely switches outputs off, can also be configured as enable (see fig.12)
Current Share	Up to 3 supplies can be connected in parallel. Output current is shared within 10% at full load. Derate overall output current to 90% when used in parallel (see fig.13, 14 & 15)
Remote Sense	Compensates for 0.5 V total voltage drop

Environmental

Characteristic	Minimum	Typical	Maximum	Units	Notes & Conditions
Operating Temperature	-10		+70	°C	Derate linearly from +50 °C at 2.5%/°C to 50% at 70 °C when forced cooled. See Thermal Considerations.
Storage Temperature	-20		+85	°C	
Cooling	13			CFM	U Channel Version. -TF & -EF models have integral fan. See Thermal Considerations for U Channel.
Humidity	5		95	%RH	Non-condensing
Operating Altitude			3000	m	
Shock					3 x 30 g/11 ms shocks in both +ve & -ve directions along the 3 orthogonal axis, total 18 shocks.
Vibration					Single axis 10-500 Hz at 2 g x 10 sweeps

Thermal Considerations (U Channel)

In order to ensure correct and reliable operation of the PSU in the most adverse conditions permitted in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. See drawing on page 12 for component locations. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of any direct air flow).

Temperature Measurements (Ambient \leq 50 °C)	
Component	Max Temperature °C
T3	90 °C
BR1	105 °C
D35	85 °C
L3	90 °C
