

100 V field-effect rectifier diode

Datasheet - production data

Description

The device is based on a proprietary technology that achieves the best in class V_F/I_R trade-off for a given silicon surface. This 100 V rectifier has been optimized for use in confined applications where both efficiency and thermal performance are key. With a lower dependency of leakage current (I_R) and forward voltage (V_F) in function of temperature, the thermal runaway risk is reduced. It is highly recommended to be used in adapters and chargers.

⁽²⁾Pulse test: $t_p = 380\text{ μs}$, $\delta < 2\%$

To evaluate the conduction losses use the following equation:

$$P = 0.420 \times I_{F(AV)} + 0.009 I_{F(RMS)}^2$$
