

## GaAs MMIC LOW NOISE AMPLIFIER with AGC, 2.3 - 2.5 GHz

### Typical Applications

LNA for Spread Spectrum Applications:

- BLUETOOTH
- HomeRF
- 802.11 WLAN
- 2.5 GHz Radios

### Functional Diagram

### Features

- Gain: 21 dB
- Noise Figure: 2.5 dB
- Gain Adjustment: 30 dB
- Single Positive Supply: +3V
- No External Components
- Ultra Small Package: MSOP8G

### General Description

The HMC287MS8 is a low cost Low Noise Amplifier (LNA) offering 21 dB of gain and a 2.5 dB noise figure from a single positive +3V supply that requires only 9 mA. The HMC287MS8G can be used as a variable gain LNA, offering 30 dB of gain control, which is controlled with a 0 to 3V analog voltage. The typical output 1dB compression point is +3 dBm and OIP3 is +7 dBm when in the maximum gain state. The compact LNA design utilizes on-chip matching for repeatable gain and noise figure performance and eliminates the need for external matching circuitry to reduce the overall size of the LNA function.

### Electrical Specifications, $T_A = +25^\circ\text{C}$ , $V_{dd} = +3V$

| Parameter                             | Min.      | Typ. | Max. | Units |
|---------------------------------------|-----------|------|------|-------|
| Frequency Range                       | 2.3 - 2.5 |      |      | GHz   |
| Gain                                  | 15        | 21   | 27   | dB    |
| Gain Variation Over Temperature       |           | 0.03 | 0.04 | dB/°C |
| Gain Adjustment Range (Vctl 0 to +3V) |           | 30   |      | dB    |
| Noise Figure (Vctl = 0V)              |           | 2.5  | 3.0  | dB    |
| Input Return Loss                     | 5         | 10   |      | dB    |
| Output Return Loss                    | 3         | 6    |      | dB    |
| Output 1 dB Compression (P1dB)        | -2        | 3    |      | dBm   |
| Output Third Order Intercept (IP3)    | 3         | 7    |      | dBm   |
| Control Voltage (Vctl)                | 0         |      | Vdd  | Vdc   |
| Supply Current (Idd)(Vdd = +3.0 Vdc)  |           | 9    | 15   | mA    |

### Absolute Maximum Ratings

|                                                                 |                |
|-----------------------------------------------------------------|----------------|
| Drain Bias Voltage (Vdd)                                        | +7.0 Vdc       |
| Control Voltage Range (Vctl)                                    | -0.2V to Vdd   |
| RF Input Power (RFIn)(Vdd = +3.0 Vdc)                           | 0 dBm          |
| Channel Temperature                                             | 150 °C         |
| Continuous Pdiss (T = 85 °C)<br>(derate 5.62 mW/°C above 85 °C) | 0.365 W        |
| Thermal Resistance<br>(channel to lead)                         | 178 °C/W       |
| Storage Temperature                                             | -65 to +150 °C |
| Operating Temperature                                           | -40 to +85 °C  |

### Gain Control

| Vctl (Vdc) | Gain State | Typical<br>Ictl (uA) |
|------------|------------|----------------------|
| 0.0        | Maximum    | 25                   |
| 1.5        | Middle     | 25                   |
| Vdd        | Minimum    | 25                   |

### Outline Drawing

#### NOTES:

1. PACKAGE BODY MATERIAL: LOW STRESS INJECTION MOLDED PLASTIC SILICA AND SILICON IMPREGNATED.
2. LEADFRAME MATERIAL: COPPER ALLOY
3. LEADFRAME PLATING: Sn/Pb SOLDER
4. DIMENSIONS ARE IN INCHES [MILLIMETERS].
5. DIMENSION DOES NOT INCLUDE MOLDFLASH OF 0.15mm PER SIDE.
6. DIMENSION DOES NOT INCLUDE MOLDFLASH OF 0.25mm PER SIDE.
7. ALL GROUND LEADS MUST BE SOLDERED TO PCB RF GROUND.

### Evaluation PCB

### List of Material

| Item                                 | Description                  |
|--------------------------------------|------------------------------|
| J1, J2                               | PC Mount SMA Connector       |
| J3, J4                               | DC Pin                       |
| U1                                   | HMC287MS8 Amplifier          |
| PCB*                                 | Evaluation Board 1.6" x 1.5" |
| *Circuit Board Material: Rogers 4350 |                              |

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of VIA holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
