

# **Current Transducer LA 200-P**

For the electronic measurement of currents : DC, AC, pulsed..., with a galvanic isolation between the primary circuit (high power) and the secondary circuit (electronic circuit).

ſF

the through-hole and/or the return of the primary conductor is above the top of the transducer.

LEM reserves the right to carry out modifications on its transducers, in order to improve them, without previous notice.

# Features

- Closed loop (compensated) current transducer using the Hall effect
- Printed circuit board mounting
- Insulated plastic case recognized according to UL 94-V0.

#### **Advantages**

- Excellent accuracy
- Very good linearity
- Low temperature drift
- Optimized response time
- Wide frequency bandwidth
- No insertion losses
- High immunity to external interference
- Current overload capability.

## Applications

- AC variable speed drives and servo motor drives
- Static converters for DC motor drives
- Battery supplied applications
- Uninterruptible Power Supplies (UPS)
- Switched Mode Power Supplies (SMPS)
- Power supplies for welding applications.

## **Application Domain**

• Industrial.

# Dimensions LA 200-P (in mm. 1 mm = 0.0394 inch)

#### **Mechanical characteristics**

- General tolerance
- Primary through-hole
- Fastening & connection of primary 4 pins Recommended PCB hole 0.9 mr
- Supplementary fastening Recommended PCB hole Recommended screws

± 0.2 mm 17 x 11 mm

- 4 pins 0.63 x 0.56 mm 0.9 mm
- 2 holes  $\varnothing$  1.75 mm 2.4 mm
- PT KA 22 x 6

## Remarks

- $I_s$  is positive when  $I_p$  flows in the direction of the arrow.
- Temperature of the primary conductor should not exceed 90°C.
- Dynamic performances (di/dt and response time) are best with a primary bar in low position in the through-hole.
- In order to achieve the best magnetic coupling, the primary windings have to be wound over the top edge of the device.
- This is a standard model. For different versions (supply voltages, turns ratios, unidirectional measurements...), please contact us.
