Description: These dual screw plates mate directly to Actobotics channels and brackets and create a strong joining connection. They offer two 6-32 tapped screw holes for durable mounting.

Actobotics is a robotics building system based around extruded aluminum channels, gears, precision shafts, and ball bearings. Thanks to the two standardized hole patterns, nearly all Actobotics components can be intuitively connected together. The wide range of components makes building complex electromechanical prototypes or finished projects a reality.
