● Test Method :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

(1) Measurement place

A place that is nothing of extreme light reflected in the room.

(2) External light

Project the light of fluorescent lamps which are not high frequency lamps and must be less then 10 Lux at the module surface.

($E_e \leq 10\text{Lux}$)

(3) Standard transmitter

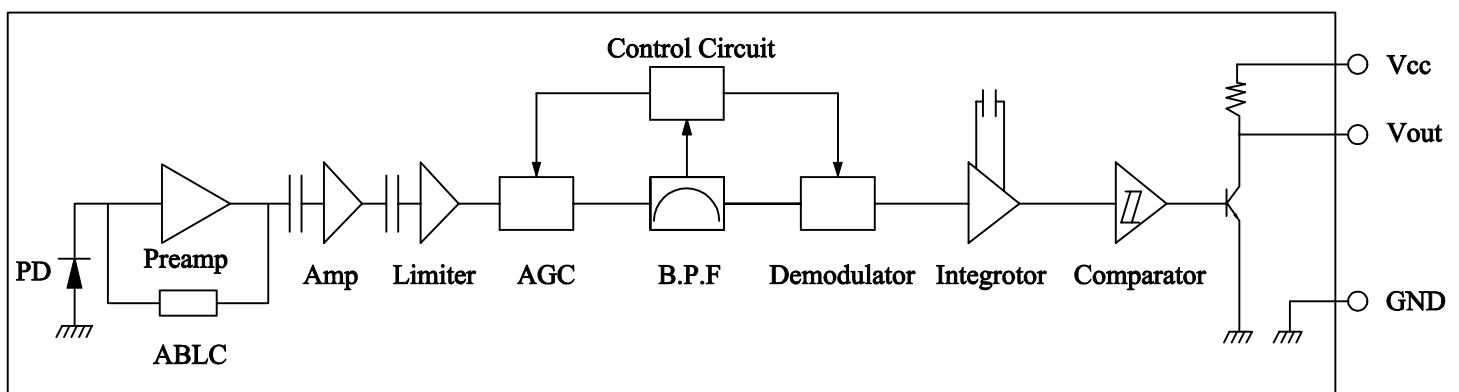

A transmitter whose output is so adjusted as to $V_o=400\text{mVp-p}$ and the output Wave form shown in Fig.-1. According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However , the infrared photodiode to be used for the transmitter should be $\lambda_p=940\text{nm}$, $\Delta \lambda =50\text{nm}$.

(4) Measuring system

According to the measuring system shown in Fig.-3
