AK2921

Zero Drift operational amplifiers

Feature

AK2921 is the dual channel CMOS operational amplifires which is available to output with very low input offset voltage (+/- 1.0μV) and near zero input offset dirft.
It's operated with very small current consumptions, 260μA typ./ch (VDD:5.0V), which is available to operate full swing signals in output.
AK2921 is appropriated to Sensor Pre Amp. applications.
