

Description

Single pole remote control circuit breaker (RCCB), temperature compensated, either with or without auxiliary contacts, and featuring a bimetal actuator which trips the circuit breaker mechanism within a specified time under overcurrent conditions. The switching contact latching system is operated by a bi-stable linear motor controlled by electronic circuitry incorporated within the device. Remote control is achieved through the use of a conventional single pole manually operated aircraft style thermal circuit breaker type 4120-0,5 A which connects the control input of the RCCB to ground.

With the control circuit breaker (ICU) in the ON position, the RCCB will switch on. When the control circuit breaker is switched off, the RCCB will change to the OFF condition. If power is applied to a previously de-energised RCCB, the device will adopt the same switching status as the control circuit breaker.

If the RCCB trips thermally in the event of a load circuit fault, the electronic circuitry will also cause the control circuit breaker to trip, thereby providing a visual indication through the position of the circuit breaker actuator.

Approved to MIL-PRF-83383.

Typical applications

Aircraft electrical systems and equipment, and other high performance applications.

Ordering information

Type No.

4930 single pole remote control circuit breaker (RCCB)

Variation

- 01** standard, with auxiliary contacts
- 02** with modified terminal barrier and auxiliary contacts
- 03** standard, without auxiliary contacts
- 04** with modified terminal barrier but without auxiliary contacts

Current ratings

5...100 A

4930 - 01 - 5 A ordering example
