⁵ Temperature shifts in differential pressure devices are mostly due to the density change of the gas over temperature.

⁶ Shift is relative to 25 °C.

⁷ Numbers in **BOLD** type indicate calibration type, mass flow or differential pressure.

Tolerance values apply to calibration type only.

⁸ Differential pressure calibrated devices are not recommended for flow measurement.

Use flow calibrated devices for flow measurement.

OUTLINE DRAWING

mass: approx. 10.8 g

dimensions in mm (inches)

Note:

Positive flow direction is defined as proceeding from port 1 (P1) to port 2 (P2) and results in positive output (Pin 6 > Pin 2). Negative flow direction is defined conversely and results in negative output (Pin 6 < Pin 2).

GAS CORRECTION FACTORS⁹

Gas type	Correction factor (approx.)
Helium (He)	0.5 ¹⁰
Hydrogen (H ₂)	0.7 ^{10,11}
Argon (Ar)	0.95

Ammonia (NH ₃)	1.1
Nitrous oxide (N ₂ O)	1.35
Nitrogen dioxide (NO ₂)	1.35

Notes:

⁹ Gas correction factors are referenced to nitrogen (N₂) as calibration gas type. Approximate gas correction factors are provided as guidelines only. Individual gas types may perform differently at temperature extremes and varying flow rates.

¹⁰ When sensing Hydrogen (H₂) or Helium (He) it may be necessary to power the mass flow sensor using increased supply voltage: Hydrogen typ. 12 V, Helium typ. 15 V

¹¹ Hydrogen (H₂) flow measurement requires the use of a special sensor. These devices provide normal operation when sensing hydrogen flow and are designated with an "H" at the end of the order number.
