

LTC7001

Fast High Voltage High Side NMOS Static Switch Driver

DESCRIPTION

Demonstration circuit 2708A is a 135V, high side switch featuring the [LTC®7001](#). The demo board is designed to switch a 5A output load from 0V up to 135V. This board offers a low 50ns (typical) propagation delay, fast switching times (<10ns) and 100% duty cycle operation.

The LTC7001 is a fast high voltage high side N-channel MOSFET driver. An internal charge pump fully enhances an external N-channel MOSFET switch, allowing it to remain on indefinitely. A powerful gate driver can drive large gate capacitance MOSFETs with very short transition times, ideal for both high frequency switching and static switch applications. The LTC7001 operates over a 0V to 135V input supply range.

The demo board includes input capacitors and an output diode to accommodate input and output supply inductance when switching loads. The switch can be controlled by providing an external signal on INPUT turret. The V_{CC}

input must be powered with an external power supply to provide power to the controller. Positions for RC delay network to control inrush current are also included.

The LTC7001 data sheet gives a complete description of the part, operation and application information. The data sheet must be read in conjunction with this demo manual for demo circuit 2708A. Proper board layout is essential for maximum thermal and electrical performance. See the data sheet sections for details. The LTC7001 is available in 10-lead MSOP package and three operating junction temperature grades, extended and industrial from -40°C to 125°C , a high temp automotive version from -40°C to 150°C and a military grade version from -55°C to 150°C .

Design files for this circuit board are available at

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^{\circ}\text{C}$

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
V_{IN}	Input Voltage		0		135	V
I_{OUT}	Output Current		5			A
	Insertion Drop	$V_{IN} - V_{OUT}$, 5A Load, Input to Output Terminals		115		mV
V_{CC}	Main Supply		7		12	V
V_{CCUV}	V_{CC} Undervoltage Lockout	V_{CC} Rising	6.5	7.0	7.5	V
		V_{CC} Falling	5.8	6.4	6.9	V
		Hysteresis		0.6		V
	Input to Output Propagation Delay	$V_{IN} = 135\text{V}$, 50Ω Load, $INP = 2.2\text{V}$ to $V_{OUT} = 13.5\text{V}$		50		ns
	Output Rise Time	$V_{IN} = 135\text{V}$, 50Ω Load, 10% to 90%		6.5		ns

QUICK START PROCEDURE

Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

NOTE: When measuring the output voltage during switching transitions, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the output voltage ripple by touching the probe tip and ground ring directly across the output capacitor as shown in Figure 2.

1. With input power supply set to zero volt and power off, connect the input power supply to $+V_{IN}$ and GND.
2. With power off, connect load from $+V_{OUT}$ to GND.
3. Set V_{CC} supply to zero volt and power off, connect V_{CC} supply to V_{CC} and GND.
4. Turn on V_{CC} supply and increase the voltage slowly to 10V.
5. Turn on the input power supply and increase the input voltage slowly to 9V. The input range is up to 135V but hot-plugging with long leads may result in input voltages in excess of 135V.
6. Connect a signal source across INPUT and GND. Apply a signal with 2.2V or higher will turn-on the high side switch.
7. Check for the proper output voltage using a voltmeter. Output voltage should be close to input voltage.
8. Once the proper output voltage is established, adjust the load.

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
