Multi-Cal-System Cables

This user's guide describes the characteristics, operation, and the use of the Multi-Cal-System cables. The Multi-Cal-System is a set of evaluation modules (EVMs) that is used to calibrate multiple PGA308 sensor modules. This document gives details regarding several different cables used in the system. The document includes the bill of materials (BOM) and cable descriptions.

Contents

List of Figures

List of Tables

1 Overview

The Multi-Cal-System EVM is part of a series of EVMs that is used to calibrate multiple PGA308 sensor modules. The PGA308 is a programmable analog sensor signal conditioner. All components in the Multi-Cal-System can be expanded to calibrate up to 64 sensors simultaneously. For a more detailed description of the PGA308, refer to the product data sheet (SBOS440) available from the Texas Instruments web site at http://www.ti.com. Additional support documents are listed in the section of this guide entitled *Related Documentation from Texas Instruments* .

The complete Multi-Cal-System contains a series of printed circuit assemblies (PCAs), and can be expanded to meet your specific system requirements.

Throughout this document, the abbreviation *EVM* and the term *evaluation module* are synonymous with the Multi-Cal-System, unless otherwise indicated.

1.1 Multi-Cal-System Cables

Figure 1 shows the Multi-Cal-Interface cable. This cable is used to connect the master and slave boards to the interface board. This cable was designed so that it can be used in environmental temperature chambers (that is, from –55°C to +125°C). The length of the cable (8ft, or 2,438m) was selected to accommodate a majority of typical applications. If your application requires longer cables, you can build your own cable using the BOM provided at the end of this document.

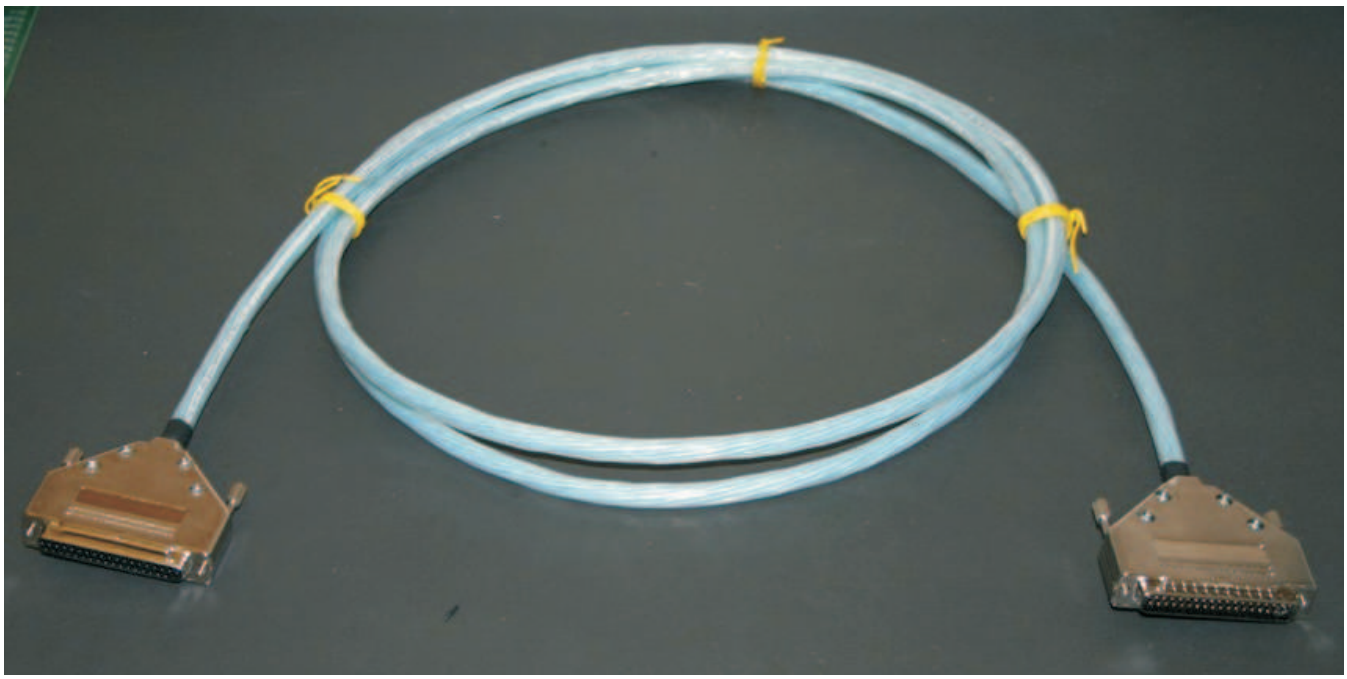

Figure 1. Multi-Cal-Interface Cable

Figure 2 shows the Multi-Cal-Power cable. This cable connects the Multi-Cal-System to the power supplies and test equipment. Banana jacks that connect to voltmeters are insulated on the outside to prevent shorting of unused connections. The length of the cable (8ft, or 2,438m) was selected to accommodate a majority of typical applications. If your application requires longer cables, you can build your own cable using the BOM provided at the end of this document.

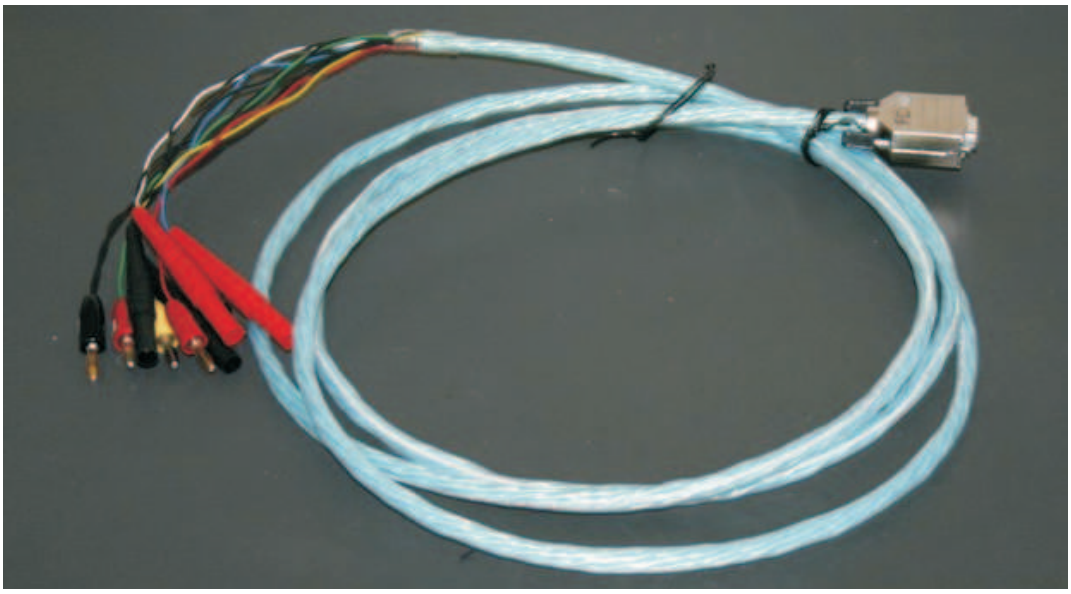

Figure 2. Multi-Cal-Power Cable

Figure 3 shows the Multi-Cal-Slave ribbon cable. This cable is used to interconnect the master and slave boards within the Multi-Cal-System. This cable is included with the Multi-Cal-Slave EVM.

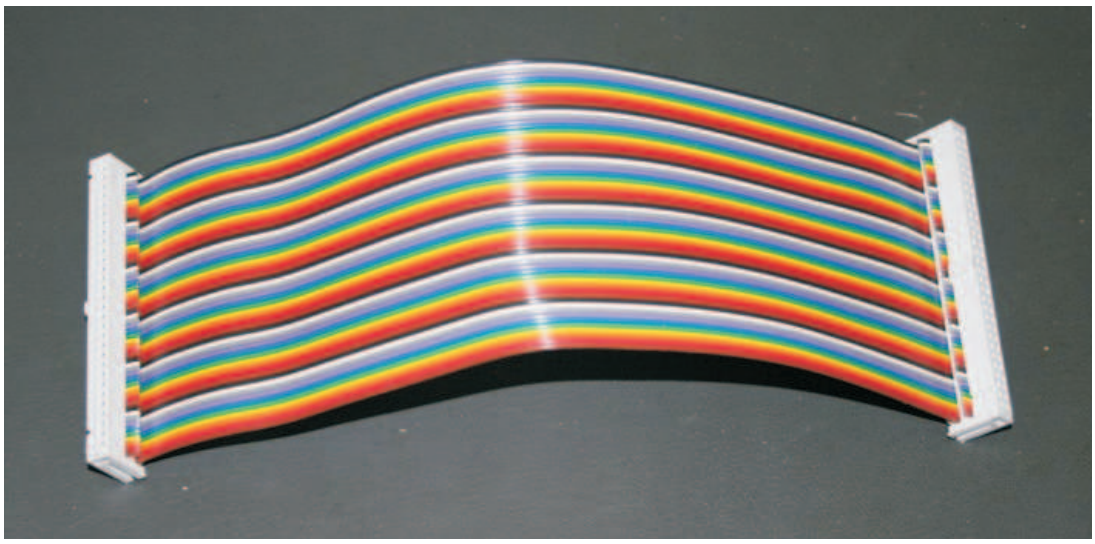

Figure 3. Multi-Cal-Slave Ribbon Cable

Figure 4 shows the raw material cable that is used in the construction of the Multi-Cal-Interface cable. This cable is rated to operate over the extended industrial temperature range (–55°C to +125°C). This cable contains 12 twisted-pair wires. Each twisted-pair is shielded with an insulated foil shield. Running adjacent to each foil shield is a bare drain wire. The drain wire provides a simple way to connect the foil shield to ground. The foil shield and twisted-pair configuration is helpful in reducing radio frequency interference/electromagnetic interference (RFI/EMI) noise pick-up on the signal connections.

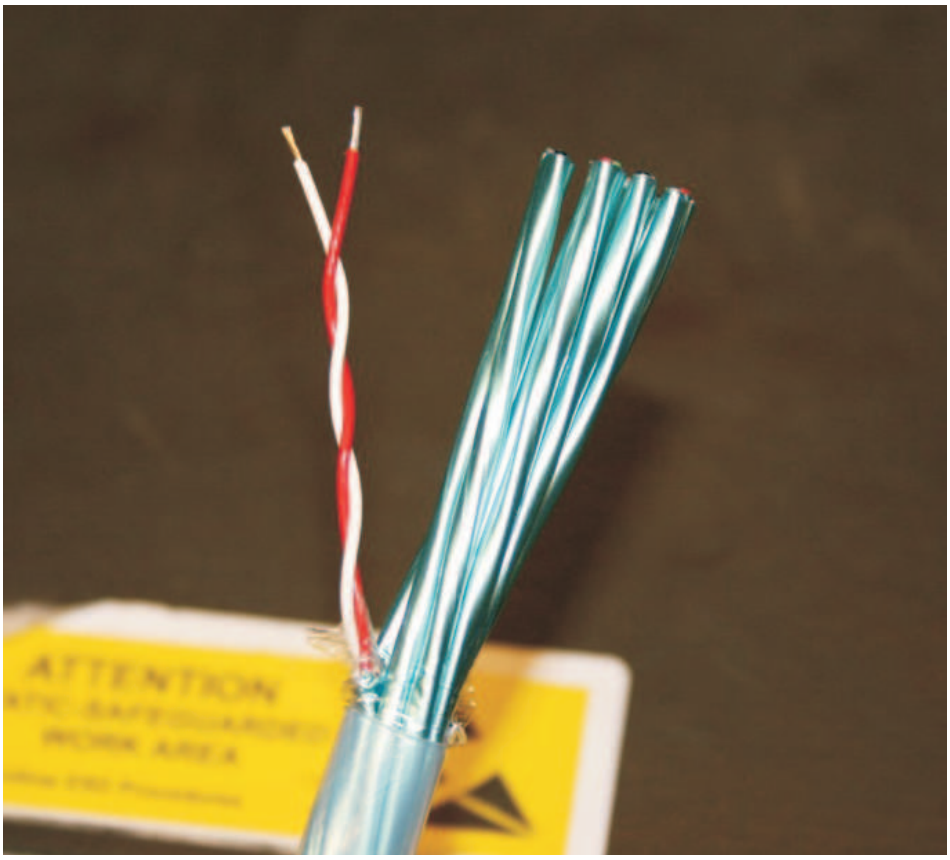

Figure 4. Cable Raw Materials

Note that the one-wire digital signal is sent on a separate shielded line to prevent capacitive coupling of digital signals into the analog signals or into other digital signals. Preventing channel-to-channel capacitive coupling of digital signals is important because it prevents erroneous data transfer to adjacent channels.

In some cases, you will need to develop your own cable (for example, the length of the Texas Instruments cable is not sufficient). If you must develop your own cable, ***it is highly recommended that you use a similar type of cable*** (that is, one with individually shielded, twisted-pair wires). The manufacturer information is given in the BOM for the interface cable.

1.2 Related Documentation from Texas Instruments

The following document provides information regarding Texas Instruments integrated circuits used in the assembly of the Multi-Cal-System EVM. This cable user's guide is available from the TI website under literature number SBOU092. Any letter appended to the literature number corresponds to the document revision that is current at the time of the writing of this document. Newer revisions may be available from the TI web site at http://www.ti.com/, or call the Texas Instruments Literature Response Center at (800) 477-8924 or the Product Information Center at (972) 644-5580. When ordering, identify the document by both title and literature number.

1.3 Applications Questions

If you have questions about this or other Texas Instruments evaluation modules, post a question in the *Amplifiers* forum at http://e2e.ti.com. Include in the subject heading the product in which you are interested.

2 Multi-Cal-Interface Cable

2.1 Signal Definitions

Table 1 summarizes the signal definitions on the Multi-Cal-Interface cable.

Table 1. Signal Definition on Multi-Cal-Interface Cable

Pin P0	Signal	Function on P0
1	Chassis ground	Chassis ground
2	One0	One-wire digital communication line.
3	Pos0	Positive device supply.
4	Neg0	Negative device supply.
5	GND0	Ground force for current modules. Ground sense for voltage modules.
6	$V_{OUT}0$	Output voltage measurement.
7	SCK0	SPI SCK for XTR108.
8	CS0	SPI CS0 for XTR108
9	IO0	SPI Input / Output for XTR108
10	Chassis ground	Pins 10 to 18 repeat the function of Pins 1 to 9 for channel 2
11	One1	
12	Pos1	
13	Neg1	
14	GND1	
15	$V_{OUT}1$	
16	SCK1	
17	CS1	
18	IO1	
19	—	No connection
20	Chassis ground	Pins 20 to 28 repeat the function of Pins 1 to 9 for channel 3
21	One2	
22	Pos2	
23	Neg2	
24	GND2	
25	Vout2	
26	SCK2	
27	CS2	
28	IO2	
29	Chassis ground	Pins 29 to 37 repeat the function of Pins 1 to 9 for channel 4
30	One3	
31	Pos3	
32	Neg3	
33	GND3	
34	Vout3	
35	SCK3	
36	CS3	
37	IO3	

2.2 Wiring Definitions

The wiring guidelines and definitions for the Multi-Cal-Interface cable are listed in Table 2.

Table 2. Wiring for Multi-Cal-Interface Cable

Connector Pin #	Connection	Pair		Signal	Connection	Connector Pin #
1	Shield			Shield0	NC	1
2	Coax			One	Coax	2

3 Slave Ribbon Cable

3.1 Signal Definitions

The signal definitions for the Slave ribbon cable are shown in Table 3.

Table 3. Signal Definition for Slave Ribbon Cable

Pin	Signal	Comments
1, 2, 3, 4, 5	V_{POS_Slave}	Positive device power supply passed to the slave.
6, 7, 8, 9, 10	V_{NEG_Slave}	Negative device power supply passed to the slave.
11, 12, 13, 14, 15, 16	GND	±15V power supply GND.
17, 18, 19	–15V slave	+15V passed to the slave.
20, 21, 22, 23, 24	+15V slave	–15V passed to the slave.
25	I_{M-}	Current meter negative connection
26	DVM–	Voltmeter negative connection.
27	DVM+	Voltmeter positive connection.
28	Earth GND	Used as RFI/EMI shield. Also prevents capacitive coupling between adjacent signals.
29	SPI_SCK	Communications on XTR108
30	Earth GND	
31	SPI_CS1	Communications on XTR108
32	Earth GND	
33	SPI_IO	Communications on XTR108
34	Earth GND	
35	ONE_WIRE	Communications for PGA309/308
36	Earth GND	
37	I2C_SDA_ISO	Used to set up bus expansion on slaves
38	Earth GND	
39	I2C_SCK_ISO	Used to set up bus expansion on slaves
40	Earth GND	
41	I2C_SCK	Used to set up bus expansion on slaves
42	Earth GND	
43	I2C_SDA2	Used to set up bus expansion on slaves
44	Earth GND	
45	SLAVE1	Gated clocks to select slave
46	SLAVE2	
47	SLAVE3	
48	SLAVE4	
49	SLAVE5	
50	SLAVE6	
51	SLAVE7	
52	V_{DUT}	Power control signal for three-wire mode
53	CTRL1	Mux select signals
54	CTRL2	
55	CTRL3	
56	CTRL4	
57	CTRL5	
58	CTRL6	
59	CTRL7	
60	CTRL8	

4 Power Cable

Table 4 lists the wiring specifications for the Multi-Cal-System Power cable.

Table 4. Wiring for Multi-Cal-Power Cable

Connector Pin	Connection	Pair		Signal	Termination	Label
1	$-V_{LOOP}$	Red/Green		Red	Black Banana	$-V_{DUT}$
2	$+V_{LOOP}$	Red/Green		Green	Red Banana	$+V_{DUT}$
3	I_{M+}	White/Black		White	Insulated Red Banana	I_{M+}
4	I_{M-}	White/Black		Black	Insulated Black Banana	I_{M-}
5	V_{M-}	Blue/Black		Black	Insulated Black Banana	V_{M-}
6	V_{M+}	Blue/Black		Blue	Insulated Red Banana	V_{M+}
7	+12V	Red/Black		Red	Red Banana	+12V
8	–12V	Yellow/Black		Yellow	Yellow Banana	–12V
9	GND	Red/Black and Yellow/Black		Black (two wires)	Black Banana	GND

5 Bills of Material

Table 5 through Table 7 show the parts lists for the Multi-Cal-Interface cable, the Multi-Cal-Power cable, and the Multi-Cal-Slave ribbon cable, respectively.

Evaluation Board/Kit Important Notice

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive.**

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.**

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit www.ti.com/esh.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

EVM Warnings and Restrictions

It is important to operate this EVM within the input voltage range of 5.7V to 9V and the output voltage range of 0V to 5V.

Exceeding the specified input range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the input range, please contact a TI field representative prior to connecting the input power.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than +25°C. The EVM is designed to operate properly with certain components above +25°C as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

Mailing Address: Texas Instruments, Post Office Box 655303, Dallas, Texas 75265

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
