Re: Maxim's Non-Use of Red Phosphorous

Over a decade ago, many manufacturers incorporated into their semiconductor products epoxy mold compounds containing *inorganic Red Phosphorous* that resulted in reports of field failures of such products.

The epoxy mold compounds used in Maxim Integrated products do not contain inorganic particulate red phosphorous (CAS# 7723-14-0) as an intentional flame retardant additive.

Sincerely,

A handwritten signature in black ink, appearing to read 'Leanne J. Mallini', with a long horizontal flourish extending to the right.

Leanne J Mallini
