

FEATURES

Integrated SiGe PIN photodiode, transimpedance amplifier (TIA), and limiting amplifier (LA)

Power monitor output: 1.0 A/W at O band wavelengths

50 μ m diameter germanium photodiode

Input sensitivity

$P_{OMA} = -16.5$ dBm

$P_{AVE} = -17.3$ dBm (ER = 6 dB)

PRBS31 at 10.52 Gbps, BER = 10^{-12} , $\lambda = 1270$ nm, 1290 nm, 1300 nm, 1310 nm, and 1330 nm

Antireflective coating (ARC) optimized to 1310 nm

Single 3.3 V supply

Power dissipation: 102 mW

Differential output swing: 460 mV p-p

On-chip power monitor function

Die size: 0.835 mm $\times$ 0.675 mm

APPLICATIONS

Optical module receivers up to 11.3 Gbps

Short range 10 Gb SONET, FC, Ethernet, CPRI, OBSAI, and LTE optical receivers

Capable to be in ROSA, BOSA, or MCM packages

GENERAL DESCRIPTION

The [ADN3010-11](#) is a high speed optical receiver featuring a proprietary large area germanium photodiode monolithically integrated with a silicon TIA and LA. The integration of the photodiode eliminates bond wires between the diode and the TIA that provides guaranteed performance and improved manufacturing reliability. The 50 μ m diameter photodetector enables an easy optical coupling design when aligned with a single mode fiber (SMF). With a 1310 nm optimized ARC, the [ADN3010-11](#) supports 10GBASE-LR and other applications with extended data rates of up to 11.3 Gbps.

Although the [ADN3010-11](#) can operate in the wavelength range from 850 nm to 1565 nm, it has an antireflective coating (ARC) centered at 1310 nm and is characterized only at original band

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

(O band) wavelengths (1270 nm, 1290 nm, 1300 nm, 1310 nm, and 1330 nm) in this data sheet.

The power monitor pin provides either an output voltage or current that is proportional to the sensed average photocurrent.

Typical power consumption of the [ADN3010-11](#) is 102 mW from a single 3.3 V supply. When the output is saturated, it has a typical differential amplitude of 460 mV p-p at 10.52 Gbps.

The [ADN3010-11](#) is available in die form, and it is operational over the extended industrial temperature range of -40°C to $+85^{\circ}\text{C}$.

Random Jitter (RMS)	PRBS15 at 10.52 Gbps		1.74		ps
Power Monitor Output (PMO) in O Band ²	$\lambda = 1270\text{ nm}$, 1290 nm, 1300 nm, 1310 nm, and 1330 nm		1.0		A/W
Differential Common-Mode Voltage	OUT+ and OUT- each dc-coupled $50\ \Omega$ to V_{CC}		$V_{CC} - 0.113$		V
DC CHARACTERISTICS					
Supply Voltage, V_{CC}		3.0	3.3	3.6	V
Supply Current, I_{CC}			31	49	mA
PMO Slope	Voltage mode, open circuit voltage output (V_{OC})		730		$\mu\text{V}/\mu\text{W}$
	Current mode, short-circuit current output (I_{SC})		0.73		$\mu\text{A}/\mu\text{W}$
PMO Offset	No optical input, voltage mode		32		mV
Interception	No optical input, current mode		32		μA
OPERATING TEMPERATURE RANGE		-40		+85	$^{\circ}\text{C}$

¹ From a known OMA sensitivity and optical ER, P_{AVE} sensitivity can be calculated with

$$P_{AVE}(\text{dBm}) = P_{OMA}(\text{dBm}) + 10\log((10^{(ER/10)} + 1)/(2 \times (10^{(ER/10)} - 1)))$$

where $P_{OMA} = -16.5\text{ dBm}$ and $ER = 6\text{ dB}$.

² O band wavelength range is 1260 nm to 1360 nm.

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
Supply Voltage	4.5 V
Optical Input Peak Power	10 dBm
Maximum Voltage to All Input and Output Signal Pins	$V_{CC} + 0.4\text{ V}$
Minimum Voltage to All Input and Output Pins	$\text{GND} - 0.4\text{ V}$
Storage Temperature Range	-65°C to $+125^{\circ}\text{C}$
Die Attach Temperature (<30 sec)	410°C
Junction Temperature	150°C

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 7. OMA Sensitivity vs. Data Rate

Figure 5. Power Monitor Output at Various Temperatures and Supplies

Figure 8. Power Monitor Output at Various Wavelengths, $T_A = 85^\circ\text{C}$, $V_{CC} = 3.0\text{ V}$

THEORY OF OPERATION

The power monitor pin, PM, provides either a voltage or a current output that is proportional to the sensed average photocurrent. This feature allows the user to check how well a fiber or an optical coupling system is aligned to the [ADN3010-11](#) photodetector (PD), which is typically useful during receiver optical subassembly (ROSA) manufacturing.

To receive a PM pin signal from a transistor outline (TO) packaged ROSA, the TO header must support at least five pins.

Figure 3 shows BER at 10.52 Gbps vs. input OMA at various temperatures and supplies. In Figure 3, fitting the curve to a

best fit straight line allows extrapolation of the OMA sensitivities at either $\text{BER} = 10^{-10}$ or 10^{-12} from the measured OMA input data at a wider range of BER. The extrapolated $\text{BER} = 10^{-10}$ sensitivity spans from -16.8 dBm to -17.4 dBm OMA and the $\text{BER} = 10^{-12}$ sensitivity spans from -16.4 dBm to -16.8 dBm OMA at various temperature and supply voltages.

Figure 6 shows the [ADN3010-11](#) supply current, I_{CC} , vs. optical average power, P_{AVE} , at various temperatures and supply voltages.

APPLICATIONS INFORMATION

BONDING

Figure 9. Typical Bonding Diagram for 5-Pin Metal Header Package [TO-46]

By using the recommended sequence in Table 4, the ESD or electronics stress introduced by a bonding tip can be reduced.

Table 4. Recommended Bonding Sequence

Bonding Order	Pad No.	Mnemonic
1	9	GND
2	8 ¹	VCC
3	6	GND
4	5	PM
5	4	VCC
6	3	GND
7	2	VCC
8	1	GND
9	11	OUT+
10	10	OUT-

¹ Bonding this pad is not necessary in a metal header package [TO].

POWER MONITOR (PM) OUTPUT APPLICATIONS

The PM output can be set in either voltage output mode or current output mode for a mirrored photodiode current, I_{PD} , which includes sensed photocurrent plus a preset offset current. Therefore, I_{PD} is proportional to the sensed photodiode current.

The setup of the V_{OC} (open circuit voltage output) and I_{SC} (short circuit current output) measurement is shown in Figure 10.

Figure 10. Typical PM Circuit and Test Setup

V_{OC} and I_{SC} are determined depending on the detection accuracy of I_{PD} , as follows:

$$V_{OC} = 0.7 \text{ V at } I_{PD} = 1.0 \text{ mA} \pm 10\%$$

$$I_{SC} = 700 \text{ } \mu\text{A at } I_{PD} = 1.0 \text{ mA} \pm 5\%$$

where I_{PD} is proportional to the PD dark current and process tolerance.

The PMO offset is composed of the ADN3010-11 photodiode dark current (mirrored) and a preset offset current (see Table 1 for details).

POWER MONITOR OUTPUT ESTIMATION

The PMO can be used to achieve optimal optical coupling. To use the PM pin properly, calibrate the integrated PD dark current out because the dark current is temperature and reversed bias dependent.

In voltage mode,

$$PMO = (V_{OC} - V_{DK})/0.7/P_{AVE} \text{ (optical power)}$$

In current mode,

$$PMO = (I_{SC} - I_{DK})/0.7/P_{AVE} \text{ (optical power)}$$

where:

PMO is the power monitor output (A/W) in voltage and current modes.

V_{OC} is the voltage output (mV) produced by an input light with an optical average power, P_{AVE} .

V_{DK} is the voltage output (mV) at no light input, $P_{AVE} = 0 \text{ mW}$.

P_{AVE} is the average optical power of an input light to the receiver PD.

I_{SC} is the current output at an input light with $P_{AVE} = 100 \text{ mW}$.

I_{DK} is the current output (μA) at no light input, $P_{AVE} = 0 \text{ mW}$.

The diagram shows the orthographic projection of a circuit board. The **TOP VIEW (CIRCUIT SIDE)** is a rectangle with a width of 0.835 and a height of 0.675. It features a central circular hole and several rectangular components labeled with numbers: 4, 3, 2, 1, 11, 10, 5, 6, 7, 8, and 9. The **SIDE VIEW** is a rectangle with a height of 0.675 and a width of 0.270. The width of the side view is further divided into two segments: 0.245 and 0.229.
