EVAL BOARD USER'S MANUAL

Description

The NCV885300 evaluation board provides a convenient way to evaluate and integrate a complete high-efficiency non-synchronous buck converter design. No additional components are required, other than dc supplies for the input voltage and enable pin. The board can also be connected to an external clock source to synchronize the switching frequency. The power good signal can be pulled up externally with the PG+ pin. The board is configured for a 5.0 V output with a 340 kHz switching frequency and a 3 A current limit, intended for applications requiring 2 A of current.

Modifying the NCV885300 evaluation board for different output voltage, switching frequency, or current limit is straightforward, requiring minimal component changes.

Key Features

- 5.0 V Output Voltage
- 340 kHz Switching Frequency
- 2.0 A Current Limit
- Power Good Signal
- Wide Input Voltage of 6.0 V to 36 V
- Regulated through Load Dump Conditions
- External Clock Synchronization up to 500 kHz
- Automotive Grade

Figure 1. NCV885300EVB Board Picture

NCV885300EVB

Table 1. EVALUATION BOARD TERMINALS

Pin Name	Function
VIN	Positive dc input voltage
VOUT	Regulated dc output voltage
GND	Common dc return
EN/SYNC	Enable input and external clock synchronization input
PG	Digital power good output
PG+	Power good pull-up. Use this pin only when pulling-up PG to an external voltage source.

Table 2. ABSOLUTE MAXIMUM RATINGS

(Voltages are with respect to GND)

Rating	Value	Units
Dc supply voltage (VIN)	-0.3 to 36	V
Dc supply voltage (EN/SYNC, PG, PG+)	-0.3 to 6.0	V

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

Table 3. ELECTRICAL CHARACTERISTICS

(T_A = 25°C, 6.0 V ≤ V_{IN} ≤ 36 V, V_{EN/SYNC} = 5.0 V, 0 ≤ I_{OUT} ≤ 2.0 A, unless otherwise specified)

Characteristics	Conditions	Typical Value	Units
Regulation			
Output Voltage		5.0	V
Voltage Accuracy		2	%
Line Regulation	I _{OUT} = 1.0 A	0.04	%
Load Regulation	V _{IN} = 13.2 V	0.12	%
Switching			
Switching Frequency		340	kHz
Soft-start Time		2.0	ms
SYNC Frequency Range		270 to 500	kHz
Current Limit			
Cycle-by-Cycle Current Limit		3.33	A
Over Current Protection Threshold		5.0	A
Protections			
Input Undervoltage Lockout (UVLO)	V _{IN} decreasing	3.1	V
Thermal Shutdown	T _J rising	170	°C

NCV885300EVB

Figure 2. NCV885300EVB Board Schematic

Operational Guidelines

1. Connect a dc input voltage, within the 6.0 V to 36 V range, between VIN and GND
2. Connect a load between VOUT and GND
3. Connect a dc enable voltage, within the 2.0 V to 5.5 V range, between EN/SYNC and GND
4. Optionally, for external clock synchronization, connect a pulse source between EN/SYNC and GND. The high state level should be within the 2.0 V to 5.5 V range, and the low state level within the 0.0 V to 0.8 V range, with a frequency within the 270 kHz to 500 kHz range.

Figure 3. NCV885300EVB Board Connections

Power Good Operation

- The Power Good pin (PG) allows you to digitally monitor the output voltage. When VOUT is above 90% of the expected value, the PG signal is in a high state. By default, PG is pulled high to VOUT through a 10 k Ω resistor.
- Optional: To pull the PG pin high using a signal other than VOUT, please make the following board modifications:
 1. Remove R1 from the board.
 2. Populate R6 with a 10 k Ω resistor.
 3. Connect the a voltage source between PG+ and GND (please see the Absolute Maximum Ratings table for more information).
 4. PG is now ready to digitally monitor VOUT using an external pull-up.

ON Semiconductor and the ON Semiconductor logo are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is as such not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and should as such only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

The board is delivered "AS IS" and without warranty of any kind including, but not limited to, that the board is production-worthy, that the functions contained in the board will meet your requirements, or that the operation of the board will be uninterrupted or error free. ON Semiconductor expressly disclaims all warranties, express, implied or otherwise, including without limitation, warranties of fitness for a particular purpose and non-infringement of intellectual property rights.

ON Semiconductor reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by ON Semiconductor shall not constitute any representation or warranty by ON Semiconductor, and no additional obligations or liabilities shall arise from ON Semiconductor having provided such information or services.

The boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. Should you purchase or use the board for any such unintended or unauthorized application, you shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

FCC WARNING – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by ON Semiconductor to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

ON Semiconductor does not convey any license under its patent rights nor the rights of others.

LIMITATIONS OF LIABILITY: ON Semiconductor shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if ON Semiconductor is advised of the possibility of such damages. In no event shall ON Semiconductor's aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.
