

General Description

The MAX31865PMB1 peripheral module (Pmod™) provides the necessary hardware to interface the MAX31865 RTD-to-digital converter to any system that utilizes Pmod-compatible expansion ports configurable for SPI communication. The IC is an easy-to-use resistance-to-digital converter optimized for platinum resistance temperature detectors (RTDs). This module is set up to operate with a PT100 platinum RTD.

For full range accuracies, other RTD types, and detailed information regarding operation of the IC, refer to the MAX31865 IC data sheet.

Features and Benefits

- Simple Conversion of Platinum RTD Resistance to Digital Value
- Handles 100Ω to 1kΩ (at 0°C) Platinum RTDs (PT100 to PT1000)
- Compatible with 2-, 3-, and 4-Wire Sensor Connections
- 6-Pin Pmod-Compatible Connector (SPI)
- RoHS Compliant
- Proven PCB Layout
- Fully Assembled and Tested

Ordering Information appears at end of data sheet.

Detailed Description

SPI Interface

The MAX31865PMB1 Pmod can plug directly into a Pmod-compatible port (configured for SPI) through connector J1. For information on the SPI protocol, refer to the MAX31865 IC data sheet.

J1 provides connection of the module to the Pmod host. The pin functions and pin assignments adhere to the Pmod standard recommended by Digilent. See [Table 1](#) for detailed descriptions.

CON1

Connector CON1 provides connection to the IC pins, as follows:

- Connector CON1 pin 1 connects to FORCE+ and FORCE2 (pins 5 and 6) of the IC.
- Connector CON1 pin 2 connects to RTDIN+ (pin 7) of the IC.
- Connector CON1 pin 3 connects to RTDIN- (pin 8) of the IC.
- Connector CON1 pin 4 connects to FORCE- (pin 9) of the IC.

J2

Two jumpers at J2 are provided to select either 2-wire or 3-wire RTD configuration. For 2-wire RTD, install both jumpers, from 1-2 and 3-4. For 3-wire RTD, install jumper from 3-4 only.

Power Supplies

The Pmod is powered directly by the +3.3V power supply from the MAXUSB2PMB Munich board, pins 6 and 12 of connector J1.

Software Graphical User Interface (GUI)

The Munich GUI is provided to facilitate the evaluation of the Pmod.

Visit www.maximintegrated.com/evkitsoftware to download the latest version of the Munich GUI software, PMOD_SPI.ZIP. Refer to the MAX31865PMB1 peripheral module and Munich (USB2PMB1) adapter board *Quick Start Guide* for step-by-step evaluation using the Munich GUI.

Table 1. Connector J1 (SPI Communication)

PIN	SIGNAL	DESCRIPTION
1	SS	Chip Select. Assert low to enable the SPI interface.
2	MOSI	MAX31865 Serial-Data Input
3	MISO	MAX31865 Serial-Data Output
4	SCLK	MAX31865 Serial-Clock Input
5, 11	GND	Ground
6, 12	V _{CC}	+3.3V Power Supplies
7	DRDY	Active-Low Push-Pull Data-Ready Output. $\overline{\text{DRDY}}$ goes low when a new conversion result is available in the data register. When a read-operation of an RTD resistance data register occurs, DRDY returns high.
8–10	—	No Connection
